THE COMMERCE OF SPAIN

IN

1898.

REPORT ON TRADE AND COMMERCE OF SPAIN FOR THE YEAR 1898.

By Mr. H. HARRISON, *Commercial Attaché to Her Britannic Majesty's Embassy at Madrid.*

[Reprinted from British Diplomatic and Consular Reports, No. 2245, Annual Series, May, 1899.]

In spite of the wars and consequent general excitement and heavy taxation, native industries in Spain have not suffered as greatly as it was feared they would do. The loss of the colonial markets, on which the export trade of Spain greatly depended, has made it necessary for the Government to take serious steps for finding new markets for Spanish products and for stimulating and enlarging those already known. With this intention several important measures have been instituted.

A special subdepartment in the ministry of foreign affairs has been created for the purpose of supplying commercial information and statistics to merchants and tradesmen. Morocco and the Spanish-American Republics naturally offer the most promising markets for Spanish products, owing to affinity of race, language, and customs, and to these countries the attention of the Spanish Government is especially directed.

Commercial attachés have been appointed for Mexico, Brazil, Uruguay, the Argentine Republic, and Chile, and all possible steps are being taken to increase Spanish interests in these countries.

A general assembly of the Spanish chambers of commerce was held at Saragossa on November 20, last, to discuss the commercial position of the country. The meeting was held under the most orderly conditions, and their efforts were treated with respect by the Government and caused a good impression in the country, and a petition embodying the opinions of the chambers was duly presented to the Queen Regent. Although it has as yet led to no practical result, the fact that the assembly has been held at all is a proof of the general anxiety among a large and influential portion of the nation to take immediate steps for the improvement of trade.

Increased interest is now being taken in all mining questions in Spain, as it is being recognized at last that, if properly developed, the mineral wealth of the country can be turned to enormous advantage. Although retarded at present by the want of railways and the great distances of some of the important mining provinces from the coast and the consequent cost of carriage, a great development has taken place in the last two years in the mining industry, and as will be seen below (page 33) the amount of minerals exported has greatly increased.

The number of soldiers who have returned from foreign service and the reduced number of men now required for the army will insure an increased number of laborers. The anxiety to open up new enterprises for the improvement of the country will, it is hoped, cause the Spanish Government to encourage in every way the investment of foreign capital in Spain. Under these circumstances the great natural mineral wealth of Spain should be taken into serious consideration by those mining companies that have not at present interests in this country.

The sole right of sale and manufacture of tobacco in Spain is held by the Bank of Spain in the form of a monopoly granted under Royal Decree of June 10, 1887, and extended for a further twenty-five years under law of August 30, 1896.

The cultivation of tobacco in Spain is forbidden by law, although judging from the small quantities grown in many gardens it appears that it might be made an important industry. According to the regulations the cultivation of tobacco is prohibited both in Spain and the Balearic Islands. The tobacco monopoly is required to make experiments in the cultivation during three years in different parts of Spain. These experiments are being carried out, but it appears that whatever the result it is most improbable that the cultivation of tobacco will be allowed during the lease of the present monopoly.

The crisis in the wheat trade during the first four months of the year 1898 was the cause of serious disturbances, the suspension of the import duties, and the prohibition of the export of cereals. Spain is naturally a self-supporting country independent of the importation of food stuffs. The production of wheat is very large, and it is estimated that in a favorable year, allowing for consumption and seed, there should be 4,000,000 quarters of wheat for exportation.

Heavy duties and surcharges are imposed upon the importation of cereals into Spain, for the reason that the supply of Cuba and Porto Rico with flour under the favorable conditions allowed by the Spanish colonies to the mother country was an important trade in Spain, and was used as a source of income to the national treasury.

The import duties on wheat in January, 1898, were as follows: Wheat, 10 to 50 pesetas per 100 kilograms; flour, 17 to 30 pesetas per 100 kilograms. At the commencement of 1898 the price of wheat was rising steadily on account of the increased prices all over Europe and the depreciation of Spanish currency, so that speculators, foreseeing a further rise in prices, refused to sell their stocks, except at exorbitant rates.

By the end of February the situation was critical. The price of wheat was 48s. 7d. per quarter, and bread riots were taking place in various agricultural centers. On March 3 a temporary relief was afforded by the issue of a Royal order removing the surcharges on the importation of wheat, flour, and bran, and the price fell to 39s. 7d. per quarter. By the middle of April, owing to the enormous depreciation of Spanish currency (50 pesetas = £1), the owners of cereals in Spain were able to export their goods at a great profit, on account of being paid in gold, and great excitement arose on this account from the fear that the home markets might be left unsupplied. Serious riots occurred in many cities on the removal of stores of wheat, and special regulations as to the price of bread were made by various municipalities. On May 7 a Royal order was published suspending all import duties and prohibiting the export of all cereals, potatoes, beans, and flour until August 15 following. Fortunately the harvest proved excellent, and on August 15 the export of cereals was again permitted and an import tax of 6 and 10 pesetas per 100 kilograms on wheat and wheat flour respectively was imposed and the ordinary import duties on other cereals reestablished.

The prohibition to export vegetables, however, caused serious loss to the important industry of producing potatoes and fresh vegetables for foreign markets. These vegetables are of special kinds and consequently of extra value, which could not be obtained in Spain. A petition has recently been addressed to the Spanish Government that an assurance should be given that no such order should be imposed in future, but they were unable to accede to this request.

Under the regulations of the budget law of June 28, 1898, an export tax of 2½ per cent ad valorem was imposed on all merchandise, with the exception of cork and rags, which continued to pay the duties imposed by the actual tariff, and on coal and coke for the Canary Islands. The tax was, however, very unpopular in the country, owing to the difficulties already experienced by exporters from the loss of the colonial markets, and it was withdrawn on October 10, last.

GENERAL STATISTICS OF THE FOREIGN TRADE OF SPAIN DURING THE YEARS 1896, 1897, AND 1898.

Argentine Republic	8,706,814	13,854,567	10,076,706	11,467,023
Switzerland		10,916,292		
Gibraltar			8,582,422	9,242,959
Holland			18,396,441	18,907,659
Uruguay			4,794,670	5,002,075
Mexico			8,682,160	7,743,669
Spanish colonies	166,149,310	170,881,439	346,547,851	372,327,060
Other countries	79,803,644	88,809,123	28,462,461	34,406,108
Total	909,589,269	909,538,661	1,023,252,447	1,074,833,372

As seen in the above statistics, Great Britain and France hold one-third of the total import trade and half the total export trade of Spain. * * *

The apparent decrease in the trade of France with Spain is explained by the fact that until the year 1897 it was impossible to learn from the published statistics the actual origin or destination of a large quantity of the articles of foreign trade. On this account much of the trade in transit through France was credited to that country, which therefore appeared to have a much larger trade with Spain than was actually the case.

For the same reason, the large increase in the trade of Germany with Spain is partly explained by the fact that Belgium and Holland had previously been credited with much of the German trade which had been sent in transit through these countries.

Under the present arrangement of the official statistics the origin and destination of the merchandise is stated, and it is therefore possible to arrive at a correct estimate of the foreign trade with Spain.

MINERALS, POTTERY, GLASSWARE, ETC.

The first list of articles enumerated in the Spanish custom-house tariff is composed of stones, earths, minerals, glassware, and pottery. The following table shows the value of the importations during the last year as compared with the two previous years:

ARTICLES.	1896		1897		1898

Pottery	2,590,711	103,000	2,356,553	94,000	1,520,311	61,000
Total	69,157,316	2,766,000	72,715,632	2,908,000	58,120,006	2,325,000

The articles of the first group, consisting of marble and other building stones and cement, show a considerable increase. The marble, valued at about 500,000 pesetas (£20,000), was practically all imported from Italy. The cements, lime, plaster, and other building necessities, valued at 4,705,000 pesetas (£188,000) in the year 1897, were supplied to the value of nearly 3,000,000 pesetas (£120,000) by France, about 1,000,000 pesetas (£40,000) by England, 350,000 pesetas (£14,500) by Belgium, and 310,000 pesetas (£12,500) from Portugal.

The principal ports of entry for these products are Bilbao, Barcelona, Seville, Gijon, and Cartagena.

The importation of coal into Spain in 1898 shows a decrease of 418,000 tons as compared with the previous year. This is due to the high rate of exchange and high prices of coal. On this account a law was passed on June 28, 1898, reducing the import duties on coal and coke to 1.50 pesetas from 2.50 pesetas per ton of 1,000 kilograms. The ordinary tariff was again brought into force on January 1, 1899. In spite of the shutting down of many of the Spanish factories on account of the war and the consequent crisis in the manufacturing trades, the consumption of coal was more than in the previous year, and this was supplied by the largely increased production of coal in Spain.

The foreign supply of coal in Spain is practically confined to the English market, and therefore all details of the production of coals in Spain are of special interest.

The following table, taken from the *Revista Minera*, shows the production, commercial movement, and consumption of coal in Spain during the last three years:

ARTICLES.	QUANTITY.		
	1896	1897	1898
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Spanish production of coal	1,867,842	2,019,400	2,466,800
Spanish production of lignite.....	55,413	54,232	59,800
Importation of coal.....	1,447,345	1,633,333	1,215,554
Importation of coke (expressed as coal) at 72 per cent.....	325,306	298,520	321,739
Total	3,695,906	4,005,485	4,063,893
Exportation.....	4,296	2,539	2,772
Consumption in Spain.....	3,691,610	4,002,946	4,061,121

The consumption of coal in 1898, therefore, increased by 58,175 tons, and this quantity and the decrease of 417,779 tons imported in the year have been supplied by the Spanish coal, the production of which has increased 22 per cent. * * *

The importation of glass and glassware is steadily declining in Spain, owing to the increased number of factories which now supply the great mass of the ordinary kinds of glass. The Spanish factories, many of which are carried on with head workmen from French factories, are beginning to produce excellent articles, and the lower price gives them a ready sale. Of the total value of the glass imported in 1897, amounting to 3,673,000 pesetas (£147,000), only the value of 304,000 pesetas (£12,000) was supplied by England. More than half of the imported glass is of French manufacture, Belgium being the only other country with an important interest in the trade.

The pottery must be considered in three classes: Bricks, tiles, etc., pottery, and porcelain.

In bricks, tiles, etc., a slight increase in importation is noticed. Of the total import in 1897, valued at 770,000 pesetas (£31,000), nearly the value of 600,000 pesetas (£24,000) was imported from Great Britain. The value of the importation from France was 112,000 pesetas (£4,500).

The importation of pottery in 1897 was valued at 666,000 pesetas (£26,600), and of this nearly half came from France. Of other countries, England supplied pottery for 174,000 pesetas (£7,000), and Germany for 109,600 pesetas (£4,400).

British trade in porcelain is of small importance at present. The total importation in 1897 into Spain was valued at 1,206,000 pesetas (£48,000). Of this, French porcelain was valued at 647,000 pesetas (£26,000); German at 424,000 pesetas (£17,000); and Belgian, 47,000 pesetas (£1,900).

Porcelain figures and ornaments were imported in 1897 to the value of 565,000 pesetas (£22,000). Of this, the French manufactures were valued at 212,000 pesetas (£8,000), the German at 178,000 pesetas (£7,000), and British at 21,000 pesetas (£800).

IMPORTATIONS OF METALS AND THEIR MANUFACTURES.

The importation of metals and articles manufactured of metals has decreased in every class except tin plates, and more especially in iron and articles manufactured of it. The production of metals and their products in Spain has also decreased.

The following table shows the values of the different classes of metals imported during the last three years:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Cast iron.....	3,612,370	145,000	2,976,597	119,000	1,491,873	59,000
Wrought iron.....	9,382,482	375,000	9,584,503	383,000	6,150,438	246,000
Iron and steel wire.....	1,683,844	67,000	1,161,724	46,000	770,476	31,000
Wrought iron (large pieces).....	1,269,577	51,000	1,261,118	50,000	410,144	16,000
Iron, manufactured.....	4,242,294	169,000	3,618,959	144,000	2,993,702	119,000
Tin plates.....	407,311	16,000	226,579	9,000	261,184	10,000
Copper and its alloys.....	3,725,435	149,000	4,021,909	161,000	3,142,823	125,000
Tin in ingots.....	2,159,419	86,000	1,800,267	72,000	1,629,608	65,000
Total.....	26,512,732	1,060,000	24,651,656	986,000	16,850,248	674,000

The importation of steel and iron rails, valued at 1,400,000 pesetas (£56,000) in 1897, and supplied in about equal quantities by England, Germany, Belgium, and France, was only valued in 1898 at 570,000 pesetas (£23,000).

Iron and common steel bars, valued in 1897 at 750,000 pesetas (£30,000), and supplied for the value of 320,000 pesetas (£13,000) by England, 153,000 pesetas (£6,000) by Sweden, and 122,000 pesetas (£5,000) by Germany, have fallen to the value of 570,000 pesetas (£23,000).

The importation of wrought-iron wheels, axles, etc., valued in 1897 at 4,000,000 pesetas (£160,000), and supplied by Belgium for the value of 3,360,000 pesetas (£134,000), Great Britain for 390,000 pesetas (£15,000), and other countries in smaller quantities has been reduced to the value of 2,500,000 pesetas (£100,000).

Wrought-iron and steel in sheets and pieces imported in 1897 for the value of 1,500,000 pesetas (£60,000), and supplied by Great Britain for 600,000 pesetas (£24,000), and Belgium for 450,000 pesetas (£18,000), was only imported for the value of 1,200,000 pesetas (£50,000) in 1898.

Wrought-iron tubes of all kinds imported into Spain in 1897 for nearly 1,000,000 pesetas (£40,000), and supplied by Great Britain for the value of 550,000 pesetas (£22,000), and by France and Germany for the value of about 150,000 pesetas (£6,000) each, were in 1898 imported for about half that value.

Wrought-iron screws and nails, etc., imported in 1897 for the value of upward of 1,000,000 pesetas (£40,000), and supplied by France for 450,000 pesetas (£18,000), Belgium 250,000 pesetas (£10,000), Great Britain 140,000 pesetas (£5,500), were only imported for the value of 800,000 pesetas (£32,000) last year.

The importation of files and other fine tools for artisans was valued at 660,000 pesetas (£26,000) of which 300,000 pesetas (£12,000) was the value of the English supply, Germany and France having each supplied these articles for a value of about 170,000 pesetas (£7,000).

Iron and steel wire imported in 1897 for the value of 1,160,000 pesetas (£46,000) was supplied from Germany for 427,000 pesetas (£17,000); from Great Britain for 360,000 pesetas (£14,000); from France for 248,000 pesetas (£10,000); and from Belgium for 140,000 pesetas (£6,000), decreased to the value of 770,000 pesetas (£31,000) in 1898.

The importation of wrought iron and steel in large pieces valued at 1,260,000 pesetas (£50,000) in 1897, of which the value of 900,000 pesetas (£36,000) was supplied by France, 214,000 pesetas (£9,000) by Belgium, and 130,000 pesetas (£5,000) by England, was reduced to the value of 410,000 pesetas (£16,000) in 1898.

In manufactured iron articles, including those coated with other metals or porcelain, the importation in 1897 was valued at 3,600,000 pesetas (£144,000), and was reduced to the value of 3,000,000 pesetas (£120,000) in 1898.

These articles of the commoner class, in which sheet iron predominates, are imported for half the total supply from France. Great Britain sends about one quarter the supply, and Germany is the only other country with any considerable interest in the trade.

The decrease in the consumption of metals and their manufactures is evident from the small production of steel, iron, and pig iron in 1898 as compared with 1897.

The following table from the Revista Minera shows the consumption of mineral iron in Spain during the year 1898:

PROVINCES.	Factories.	Quantity.
		<i>Tons.</i>
Vizcaya	Vizcaya	180,000
	Altos Hornos	140,000
	S. Francisco del Desierto	52,076
	Sta. Ana de Bolueta	5,000
	Purísima Concepción	4,000
	Total	381,076

IMPORTATION OF COTTON AND MANUFACTURES OF.

The importation of cotton and manufactured cotton goods shows a considerable decrease, as will be seen from the following table:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Raw cotton	65,820,888	2,632,000	85,075,052	3,403,000	73,807,989	2,952,000
Cotton yarns	3,900,304	156,000	3,712,676	148,000	2,455,064	98,000
Cotton tissues	3,413,298	136,000	2,731,393	109,000	1,856,354	74,000

Hosiery.....	355,833	14,000	262,772	10,000	195,761	8,000
Total	75,223,326	3,009,000	93,300,414	3,732,000	80,831,060	3,233,000

The large decrease in the importation of raw cotton in 1898 was caused by the crisis in the Spanish cotton factories, owing to the loss of their colonial trade and the war with the United States, which country was the chief source of supply.

The value of the export of cotton goods from Spain fell for an amount of upward of 23,000,000 pesetas (£920,000), and although the demand for Spanish-made goods has greatly increased in Spain, it is not large enough to keep in employment the factories that have been set up to supply the colonial trade.

Raw cotton, which was valued at 85,000,000 pesetas (£3,400,000) in 1897, was imported from the United States for 68,790,000 pesetas (£2,751,600), from Turkey for 4,444,000 pesetas (£177,000), and from India for 2,392,000 pesetas (£95,000). Nearly the whole of this quantity was landed at Barcelona, and a small quantity at Malaga, Corunna, and Santander.

Cotton yarns are imported principally from Great Britain. Yarns of one or two threads, both up to No. 35, inclusive, and from No. 36 upward, were only imported for the value of 74,000 pesetas (£3,000) and 82,000 pesetas (£3,300), respectively.

The importation of yarns of three or more threads is more important, and was valued in 1898 at 2,300,000 pesetas (£92,000). These yarns are nearly all imported from Great Britain. In 1897, of the total importation, valued at 3,250,000 pesetas (£130,000), of which upward of 3,000,000 pesetas (£120,000) was British, the German yarns were valued at 83,000 pesetas (£3,300), and the French at 65,000 pesetas (£2,600).

The value of the cotton tissues imported in 1898 was reduced to 1,800,000 pesetas (£72,000), from 2,700,000 pesetas (£108,000) in the previous year. This decrease was caused by the high rate of exchange and the consequent increased cost of foreign goods, and also the loss of the Spanish colonial markets, which has compelled the price of home-made goods to be reduced in order that the surplus stock could be cleared.

IMPORTATION OF FLAX, HEMP, ETC., AND THEIR MANUFACTURES.

The importation of raw and hackled hemp was, in 1896, 4,224,735 pesetas; in 1897, 2,686,907 pesetas; and in 1898, 2,472,390 pesetas; and the total value of all imports of hemp, flax, jute, and their manufactures in 1896, 22,042,977 pesetas; in 1897, 22,822,162 pesetas; and in 1898, 21,849,147 pesetas. * * *

IMPORTS OF WOOL AND WOOLEN GOODS.

The value of the imports of wools, bristles, hair, horsehair, and their manufactures has decreased in the sum of nearly 5,000,000 pesetas (£200,000) in the year 1898, as compared with the previous year, as will be seen in the following table:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Raw wool.....	12,823,600	513,000	11,336,221	453,000	9,862,567	394,000
Yarns.....	659,832	26,000	553,228	22,000	699,571	28,000
Tissues.....	9,120,238	365,000	8,252,966	330,000	4,561,988	182,000
Total.....	22,603,670	904,000	20,142,415	805,000	15,124,126	605,000

Raw bristles, hair, etc., including camel and vicuna, were only imported for the value of 426,000 pesetas (£17,000) during 1898, or 100,000 pesetas (£4,000) less than during the previous year. The trade is supplied almost entirely by Great Britain and France.

The unwashed wool imported in 1898 was valued at only 10,000 pesetas (£400).

Washed wool, the total importation of which was valued at 1,560,000 pesetas (£62,000) in 1898, is chiefly supplied by France. In 1897 the total import of this article was valued at 2,450,000 pesetas (£98,000), and of this amount France supplied wool for nearly 2,000,000 pesetas (£80,000), England for 227,000 pesetas (£9,000), and Italy for 137,000 pesetas (£5,400).

Wool combed and prepared for spinning, unbleached carded wool, and waste wool from carding are the most important in this class. In the year 1898 the total value of the combed wool imported was 7,247,000 pesetas (£290,000). France and Great Britain supply nearly the whole quantity imported. In 1897, of the total importation, valued at 7,645,000 pesetas (£306,000), French wool was valued at 3,987,000 pesetas (£159,000) and British wool at 3,147,000 pesetas (£126,000).

Woolen yarns are imported only in small quantities, and Great Britain supplies the greater part, more especially in the washed and bleached yarns, of which this class of importation is chiefly composed.

The import of woolen tissues has decreased in value for nearly 4,000,000 pesetas (£160,000).

Woolen carpets, which are chiefly supplied by England, were only imported for half the value of the previous year, or 345,000 pesetas (£14,000).

Felts, of which half the quantity imported comes from England, and the rest from France and Germany, were only imported for the total value of 80,000 pesetas (£3,000).

Blankets were only valued at 900 pesetas (£36), and nearly all were of French manufacture.

Pure wool cloth was imported in 1898 for the value of 650,900 pesetas (£26,000). In 1897 the total value of this importation was 1,000,000 pesetas (£40,000), and of this the British manufactures were valued at 730,000 pesetas (£29,000) and the French at 233,000 pesetas (£9,000).

SILK IMPORTATIONS.

The importation of silk in 1898 shows a heavy decrease in value as compared with the previous year, especially in raw and spun silk and in silk tissues.

The following table compares the values of the silk imported during the last three years:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>
Raw and spun	4, 097, 616	164, 000	4, 519, 600	181, 000	2, 056, 300	122, 000
Yarn	2, 982, 404	119, 000	3, 439, 300	137, 000	3, 064, 116	122, 000
Tissues	12, 740, 212	509, 000	11, 096, 331	444, 000	8, 348, 926	334, 000
Total	19, 820, 232	793, 000	19, 055, 231	762, 000	11, 469, 342	578, 000

Practically the whole quantity of raw and spun silk is imported from France, small quantities being also imported from China and Italy. In silk yarns the importation is chiefly supplied by France, Italy, and Switzerland, except in the class of dyed silk waste. This yarn, which was imported for the total value of about 1,200,000 pesetas (£48,000) during last year, was supplied by England for a value of nearly 700,000 pesetas (£28,000), Germany for 150,000 pesetas (£6,000), Switzerland for 130,000 pesetas (£5,000), and France for 120,000 pesetas (£5,000).

In the silk tissues nearly the whole quantity of the importation is supplied by France except the special silks from China and Japan.

PAPER, BOOKS, ETC.

The importation of paper, books, maps, and pulp for paper in the past three years has been as follows:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>
Pulp	3, 520, 823	141, 000	3, 919, 583	156, 000	3, 211, 128	128, 000
Paper	3, 029, 808	121, 000	2, 790, 860	112, 000	2, 303, 557	92, 000
Books	540, 731	22, 000	443, 620	18, 000	325, 119	13, 000

Upwards of three-quarters of the pulp for the manufacture of paper is imported from Norway and Sweden. The balance is brought from Germany, Belgium, and Great Britain.

LUMBER, TIMBER, AND FURNITURE IMPORTED.

The lumber trade of Spain is of considerable value, but has diminished by 11,000,000 pesetas (£440,000) during the last year owing to the slackness in the building trade. The following table shows the values of lumber imported during recent years:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>

Great Britain is but little interested in this trade, except as regards Canada.

Staves are imported principally from the United States and Italy. In the year 1897 the former country supplied staves for the value of 8,360,000 pesetas (£334,000), and Italy for the value of 4,400,000 pesetas (£176,000), the Argentine Republic for 840,000 pesetas (£33,000), France for 550,000 pesetas (£22,000), and England for about 400,000 pesetas (£16,000).

Building lumber was imported in 1897 from Sweden for the value of 5,765,760 pesetas (£230,000), from Russia for 5,392,000 pesetas (£215,000), from France for 4,464,000 pesetas (£178,000), from Finland for 3,295,000 pesetas (£132,000), and from the United States for 2,190,000 pesetas (£87,000).

Casks, fitted together or not, were imported from the United States for the value of 129,000 pesetas (£5,000), from Cuba for 86,000 pesetas (£3,500), from France for 75,000 pesetas (£3,000), from Russia for 60,000 pesetas (£2,400), and from Great Britain for 27,000 pesetas (£1,000).

The import of ordinary furniture in 1897 was valued at 1,328,000 pesetas (£53,000). Furniture valued at 445,000 pesetas (£18,000) was supplied by England, at 369,000 pesetas (£15,000) by France, and for 281,000 pesetas (£11,000) from Germany.

The finer kinds of furniture were valued at 1,262,000 pesetas (£50,000) in the same year, and were supplied by Austria for 606,000 pesetas (£24,000), by Germany for 295,000 pesetas (£12,000), by France for 192,000 pesetas (£7,600) and Great Britain for 50,000 pesetas (£2,000).

Lumber is imported at all the larger ports of Spain. Furniture principally at Barcelona, Bilbao, and overland by Irun.

ANIMALS AND ANIMAL PRODUCTS IMPORTED.

The importation of animals and their products employed in industry is valued at a considerable sum annually in Spain, although Great Britain is naturally very little interested in this trade.

The following table gives the value of the importations of this class during the last three years:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>
Animals	21,515,575	860,000	22,432,534	897,000	13,937,001	557,000
Skins, hides, etc.	22,527,202	901,000	22,065,821	882,000	18,249,150	730,000
Fat, manures, etc.	22,701,025	908,000	23,105,530	924,000	23,940,415	957,000
Total	66,743,802	2,669,000	67,603,885	2,704,000	56,126,566	2,245,000

Practically all the live stock is imported from Portugal, the value of animals imported from other countries being unimportant except in the case of mules, of which nearly 3,000, valued at 1,200,000 pesetas (£48,000), were imported from France in 1897.

IMPORTS OF MACHINERY.

In 1898 the value of the machinery imported into Spain shows a decrease of 5,000,000 pesetas (£200,000) as compared with the previous year, and of nearly 2,000,000 pesetas (£80,000) as compared with the year 1896. The importation of carriages and vessels also shows a decrease.

The following table gives the figures for the last three years:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>
Instruments, etc., and machinery	26,958,326	1,079,000	30,283,606	1,211,000	25,200,510	1,008,000
Carriages	1,735,525	69,000	2,342,883	93,000	2,086,413	83,000
Vessels	13,163,425	528,000	17,285,135	691,000	12,264,340	490,000
Total	41,857,276	1,674,000	49,911,624	1,996,000	39,551,263	1,582,000

In examining the different classes of machinery it is seen that agricultural machinery was imported during the year 1897 for the value of 334,000 pesetas (£13,300). Of this amount France supplied machinery for the value of 121,000 pesetas (£4,800), England for 87,000 pesetas (£3,000), and Belgium for 73,000 pesetas.

The value of the steam engines and boilers imported in the same year amounted to 6,780,000 pesetas (£271,000). Of this amount Great Britain supplied engines valued at 2,800,000 pesetas (£112,000), Belgium at 400,000 pesetas (£16,000), France at 900,000 pesetas (£36,000), and Germany at 800,000 pesetas (£32,000).

Locomotives and machinery for ships were imported for the value of 1,480,000 pesetas (£59,000). From Great Britain for the value of 507,000 pesetas (£20,000), from Belgium for 426,000 pesetas (£17,000), from France for 363,000 pesetas (£14,000), and from Germany for 184,000 pesetas (£7,000).

IMPORTATION OF ALIMENTARY SUBSTANCES AND ARTICLES.

The importation of alimentary substances and articles in 1896, 1897, and 1898 was as follows:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Meat, butter, etc.....	6,569,960	262,000	8,544,814	341,000	6,969,745	278,000
Salt cod, etc.....	26,494,038	1,059,000	25,993,669	1,039,000	22,954,810	918,000
Wheat and wheat flour.....	35,771,895	1,430,000	34,073,317	1,363,000	14,868,623	594,000
Other cereals and flour.....	24,209,597	968,000	25,110,540	1,004,000	15,983,626	639,000
Garden produce.....	5,564,328	222,000	7,081,707	283,000	4,516,864	180,000
Sugar.....	16,986,575	679,000	13,195,681	527,000	3,515,707	140,000
Cocoa.....	10,017,912	400,000	10,109,082	404,000	9,645,926	385,000
Coffee.....	18,679,474	747,000	16,137,559	645,000	13,424,082	536,000
Tea and groceries.....	1,843,756	73,000	1,634,964	65,000	1,233,366	49,000
Alcohol.....	777,008	31,000	484,839	19,000	1,111,797	44,000
Wines and beverages.....	1,178,092	47,000	1,556,037	62,000	719,629	28,000
Preserves, cheese, etc.....	5,653,958	226,000	4,313,776	172,000	3,854,226	154,000
Total	153,746,593	6,149,000	148,235,985	5,929,000	98,798,401	3,951,000

In examining this list it is seen that the decreased importation of wheat and other cereals is alone accountable for 20,000,000 pesetas (£800,000), and the decreased value of the imported sugar for a further 10,000,000 pesetas (£400,000).

In the year 1897 chickens, geese, etc., were imported from Portugal amounting to nearly 3,000,000 pesetas (£120,000), and from Russia to the value of 1,500,000 pesetas (£60,000).

Bacon valued at 1,500,000 pesetas (£60,000) was imported from the United States, and to the value of about 400,000 pesetas (£16,000) from Great Britain.

SUGAR IMPORTS AND PRODUCTION.

The following table shows the value of the sugar imported from the Spanish colonies and other countries during recent years:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Cuba.....	6,589,284	263,000	2,232,742	89,000	821,258	33,000
Porto Rico.....	8,346,838	333,000	9,285,842	371,000	2,322,902	92,000

France.....	3,018	120	2,948	110	1,800	72
Other countries.....	19,497	750	15,671	600	6,349	250
Total	16,986,575	677,870	13,195,681	526,210	3,515,707	139,422

There has been a rapid increase in the number and capacity of sugar factories in Spain. Many provinces are admirably suited for growing beet root, and this fact, coupled with the high import duties on foreign sugar, makes it probable that the home industries will soon be able to meet the demand in the Spanish market and replace the colonial sugar, on which Spain has been dependent until recent years.

COCOA AND COFFEE.

The import of cocoa is valued at about 10,000,000 pesetas (£400,000) annually. Half the supply has hitherto been furnished by the Spanish colonies. The market for the cocoa grown in the West Indian Islands should therefore be improved, as the cocoas would pay the same duties as Venezuela and Ecuador, which at present supply the greater quantity.

The importation of coffee shows a rapid decline, and should the proposed tax on colonial products be enforced, other beverages will doubtless have to take its place in the consumption of the poorer classes, by whom it is at present used as a necessity.

Coffee in 1898 was only imported for the value of 13,424,000 pesetas (£537,000), and of this the value of 10,330,000 pesetas (£413,000) was imported from Porto Rico.

The loss of this island will increase the demand on the various coffee-growing countries, and should therefore improve English markets, which have hitherto not taken so important a part in this trade as France.

EXPORTS FROM SPAIN.

Other metals and alloys	3,741,462	149,000	2,555,797	102,000	3,332,293	133,000
Total	94,161,522	3,761,500	100,230,107	4,000,700	101,303,110	4,049,000

The exportation of gold and silver jewelry and plate had been dependent in former years on the demand in the Spanish colonies, and during last year was reduced to the value of less than 500,000 pesetas (£20,000), France being the only other market for these articles.

PRODUCTION AND EXPORTATION OF PIG IRON AND MANUFACTURES OF IRON AND STEEL.

The exportation of iron in pigs has increased by 2,600 tons during the last year, although the actual production of pig iron is stated to have been less than during the year 1897. According to the Revista Minera the following quantities of pig iron were exported to various countries during the last two years:

COUNTRY.	QUANTITY.		Difference (+ increase; — decrease).
	1897	1898	
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Great Britain	9,720	15,898	+ 6,178
Italy	9,521	11,706	+ 2,185
Germany	7,860	7,660	— 200
France	9,642	7,643	— 1,999
Belgium	5,400	2,570	— 2,830
Holland	1,350	628	— 722
Total	43,493	46,105	+ 2,612

It appears, therefore, that an increase of 6,000 tons of pig iron was shipped to England in 1898 in spite of the smaller export of mineral iron.

The export of manufactured iron articles has greatly diminished, owing to the trade being practically dependent on the colonial markets. The total value of manufactured iron exported in 1898 was less than 900,000-pesetas, as compared with 2,500,000 pesetas in 1896.

The production in Spain in 1898 of steel, iron, and manufactured iron articles also shows a large decline, as well be seen from the following table:

MANUFACTURE OF IRON AND STEEL AND THEIR PRODUCTS IN SPAIN IN 1898, COMPARING TOTAL WITH THAT OF 1897.

SALT.

The production of salt, which in 1897 had fallen from 521,751 tons in 1896 to 508,605 tons, showed a further decline last year.

The exportation was as follows:

YEAR.	Quantity.
	<i>Tons.</i>
1896.....	254,803
1897.....	235,871
1898.....	219,301

The salt mines of Ibiza and Torrevieja produced 80,000 and 85,000 tons respectively in the year 1898.

COTTON GOODS AND THE COLONIAL TRADE.

The export of cotton goods has hitherto depended almost entirely on the Spanish colonies, and consequently the value of the trade in 1898 fell to almost one-half of that of the previous year.

The whole of the exported cotton goods was as follows during the last three years:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>	<i>Pesetas.</i>	<i>£</i>
White cotton tissues.....	23,908,422	956,000	28,020,445	1,120,000	9,258,176	370,000
White cotton tissues, printed and twilled.....	19,146,673	766,000	25,831,305	1,033,000	20,211,310	808,000
Hosiery.....	9,067,512	362,000	8,025,688	321,000	8,479,048	339,000
Total	52,122,607	2,084,000	61,877,498	2,474,000	37,948,534	1,517,000

Of the white cotton tissues, although the value of 27,000,000 pesetas (£1,080,000) of the total 28,000,000 pesetas (£1,120,000) were exported to the Spanish colonies in 1897, small quantities were sent to many of the Spanish-American republics. It is in these countries that it is hoped to find new markets for Spanish manufactures, and every effort will be made to make the most of the advantages of common language, race, and customs to push these wares.

In the printed and twilled cottons the decreased value of the exports last year is less important. These goods are better able to stand on their own merits, and in recent exhibitions it has been noted that great improvement has taken place both in make and design of these fabrics, which are in general use in all parts of Spain. Should they be able to compete in price with English and French cottons they will be found to rival them in foreign markets.

Cotton hosiery also forms an important article of export, and is sent to numerous foreign countries, apart from the large supply formerly sent to the Philippines and other Spanish colonies.

In the year 1897 the total export of these goods was valued at 8,000,000 pesetas (£320,000). Of this amount, hosiery for 700,000 pesetas (£28,000) was sent to France; for 224,000 pesetas (£9,000) to Venezuela; for 132,000 pesetas (£5,000) to Colombia; for 112,000 pesetas (£4,500) to Germany; for 97,000 pesetas (£3,800) to British possessions in America, as well as considerable supplies to nearly all the Spanish republics.

This having been the case two years ago, it may be expected that a much heavier competition in these goods will be offered by Spain in the markets of the world now that it is absolutely necessary for her to find an outlet for her surplus manufactures.

HEMP, JUTE, ETC.

The export of hemp, jute, and other vegetable fibers depends solely upon manufactured articles exported to the Spanish colonies, and was therefore reduced in 1898 to a very trifling value, as will be seen from the following table:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£

Cordage	530,924	21,000	611,192	24,000	521,535	21,000
Tissues	3,910,822	156,000	3,459,946	138,000	1,988,958	79,000
Total	4,526,636	180,400	4,098,348	163,100	2,564,513	102,100

WOOL AND WOOLENS.

The export of wool shows an increase in 1898 as compared with the previous year, owing to the quantity of unwashed wool sent abroad.

The following table shows the value of the exports of wool during the last three years:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Wool, unwashed	16,610,931	664,000	14,016,258	560,000	15,990,597	639,000
Wool, washed	507,548	20,000	604,359	24,000	1,095,504	42,000
Tissues	3,323,594	133,000	3,042,141	121,000	2,847,513	114,000
Total	20,442,073	817,000	17,662,758	705,000	19,933,614	795,000

Raw wool is principally exported to France, Portugal, and Great Britain. In the year 1897 the value of the raw wool exported was 14,016,258 pesetas (£560,000). Of this quantity the value of 8,530,000 pesetas (£341,000) was sent to France, of 3,894,000 pesetas (£155,000) to Portugal, and of 1,067,000 pesetas (£43,000) to Great Britain.

The export of silk has remained about the same value as in recent years, owing to the large increase in the export of cocoons, as will be seen in the following table:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Cocoons	422,112	17,000	56,292	2,200	1,386,636	55,000
Silk waste	324,703	13,000	305,998	12,000	269,547	10,500
Raw silk	273,920	11,000	335,920	13,400	973,560	39,000
Tissues	3,717,715	148,000	4,274,027	171,000	2,223,889	89,000
Total	4,648,450	189,000	4,972,237	198,600	4,847,623	193,500

The bulk of cocoons, waste, and raw silk are exported to France. The tissues were exported in large quantities to the Spanish colonies. They are now exported for a considerable value to France, Morocco, Portugal, and numerous American republics.

A considerable export trade is carried on in paper and books between Spain and the Spanish-American republics, especially in cigarette paper and Spanish publications, as will be seen from the following table:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Books and music	2,444,721	97,000	3,028,629	121,000	2,043,696	81,000
Cigarette paper.....	5,285,072	211,000	4,155,452	166,000	4,315,326	172,000
Other paper	4,702,685	188,000	4,541,035	181,000	2,415,947	96,000
Total	12,432,478	496,000	11,725,116	468,000	8,774,969	349,000

BOOTS AND SHOES AND THE COLONIAL TRADE.

The export of animals, hides, etc., has been maintained at the importance of previous years in spite of the loss of the trade with the Spanish colonies in boots and shoes, which had always been such an important industry to Spain and the Balearic Islands. This has been attained by the largely increased export in live stock and hides.

The figures are as follows:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£
Live stock.....	27,943,430	1,117,000	24,064,985	962,000	32,326,695	1,293,000
Hides, etc.....	12,048,501	482,000	14,144,725	566,000	19,937,315	797,000
Boots and shoes.....	24,307,840	972,000	23,258,880	930,000	11,097,874	444,000
Total	64,299,771	2,571,000	61,468,590	2,458,000	63,361,884	2,534,000

As in the import of live stock, the Spanish export trade is almost entirely with Portugal.

In untanned skins France imports for the value of 9,000,000 pesetas (£360,000) from Spain, out of a total value of 11,000,000 pesetas (£440,000).

The boot and shoe industry has until now depended greatly on the Spanish colonies for markets. In the year 1897 boots and shoes to the value of 21,500,000 pesetas (£860,000) were exported to Cuba, Porto Rico, and Philip-pines, the surplus export being principally to American republics. Last year the total export was reduced to 11,000,000 pesetas (£440,000).

ALIMENTARY ARTICLES.

The export of alimentary substances during last year was carried on under the most advantageous circumstances. Owing to the high rate of exchange, the good harvest, and the necessity to export as much as possible to meet extra expenses at home, this trade has increased largely.

In the following table the value of the exportation of the various descriptions of Spanish produce during the last three years can be compared:

ARTICLES.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£

Total	333,275,662	13,329,000	334,036,792	13,357,000	399,875,648	15,990,000

Hams, etc., of which the export in 1897 was valued at 1,000,000 pesetas (£40,000) were sent to the Spanish colonies for three-fourths of the total quantity, and to Great Britain for the value of 224,000 pesetas (£9,000).

The export of fish was valued at upward of 4,500,000 pesetas (£180,000), 1,500,000 pesetas (£60,000) being the value of the sardines exported. Of these, Italy received sardines for the value of 850,000 pesetas (£34,000), and France for 340,000 pesetas (£13,500). Of the other salt fish exported half was sent to Italy, and the exportation to Great Britain was only valued at 90,000 pesetas (£3,500).

The principal ports of export of sardines are Muros, Rivera, and Puebla, in Corunna, Barcelona, Vigo, and Vivero, in the province of Lugo, and include nearly all the ports on the northern coast of Spain. For salted and cured fish, Santander, Ayamonte, and Isla Cristina, in Huelva.

The export trade in cereals has until now been practically confined to supplying the Spanish colonies with flour (see page 2492). In 1897 the wheat flour exported was valued at 20,000,000 pesetas (£800,000), of which the value of 19,000,000 pesetas (£760,000) was sent to Cuba under the special privileges of the tariff in favor of the mother country.

EXPORTATION OF WINES.

The export of wine is at present the most important trade in Spain, and during the year 1898 an increased business was done in all classes.

The following table shows the value of the export of common wine in Spain during the last three years:

COUNTRY.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.

Total.....	12,680,280	506,400	11,158,390	444,600	14,180,780	564,000

The export of other full-bodied wines also shows a considerable increase, and the improvement in their quality, owing to greater care in manufactory, will probably cause an increased demand as their merits become better known.

The value of the export of these full-bodied wines during the last three years was as follows:

COUNTRY.	1896		1897		1898	
	Currency.	Sterling.	Currency.	Sterling.	Currency.	Sterling.
	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£	<i>Pesetas.</i>	£

UNCLASSIFIED GOODS.

The value of the exportation of various unclassified goods, such as fans, matches, string soled shoes (alpargatas), cards, have usually depended on the quantity of shoes shipped to the Spanish colonies.

The following table shows a great reduction in the export as compared with last year:

ARTICLES.	1896		1897		1898

THE RUSSIAN EMPIRE

AND THE
TRANS-SIBERIAN RAILROAD.

Army Department, Bureau of St

THE RUSSIAN EMPIRE,
AND
THE TRANS-SIBERIAN RAILWAY.

THE RUSSIAN EMPIRE.

ITS RAILWAY AND INDUSTRIAL DEVELOPMENT AND THEIR PROSPECTIVE EFFECT IN THE WORLD'S MARKETS.

Recent developments in the industrial and transportation facilities of Russia, by which the products of her fields, forests, factories, and mines may be increased and brought into closer competition with those of the United States in the far East and in Europe, seem to warrant a somewhat detailed discussion of these conditions in that great Empire, whose contiguous area exceeds that of any other country and whose population is exceeded by that of only one nation of the world. Recent announcements indicate that an ice-free port is to be opened at the north and connected by rail with her great lumber and ore regions; that Baltic ports, formerly closed by ice five months of the year, may now be kept constantly open by artificial processes; that railway connection is to be constructed to the Persian Gulf, thus giving an improved outlet at the south, and that her great Siberian Railway is shortly to give her a direct all-rail route to the Orient. With an increased production of natural resources likely to follow the opening of the great undeveloped region of Siberia, an increase in manufacturing interests in European Russia, and the opening of these new doors through which she may send her products to all the world, and especially to the Orient, by competing rail and water lines, Russian products and manufactures may prove important, if not serious, competitors with those of the United States in the commercial world, and especially in the Orient.

Russia presents certain characteristics, physical and otherwise, somewhat similar to those of the United States. Her territory extends from the Atlantic to the Pacific, the Baltic and Bothnia, which wash her western coast, being practically a continuation of the Atlantic. When Columbus sailed westward to discover America, the adventurous spirits of Russia were peering eastward over the Ural Mountains, and when Raleigh was attempting to plant colonies in America, the Russians were making their first permanent settlements in Siberia. Owing to the proximity of that territory and the absence of serious opposition from its people, the occupation of all Siberia by Russia required less than a century, and her first permanent settlement on the Pacific was made long before the last of our thirteen colonies was planted; and long before our colonies had become united as a nation Russia had thoroughly explored Siberia, pushed across the Bering Straits, and established herself on the mainland of America, now our own Alaska. The spanning of our own continent by railway lines thirty years ago, and the internal development which followed, suggested a similar course to the Russians, who soon began their railroad development, and during the present decade planned their great trans-Siberian railway line, which is soon to connect the Atlantic with the Pacific across her vast territory, and thus open to the world an enormous area which may become a rival of the great grain and stock producing section of the United States.

Like the United States, Russia has such variety of soil, climate, and minerals that she is able to produce within her own borders a large proportion of the necessities and comforts of life. Corn, wheat, barley, and rye furnish an ample supply of breadstuffs; vast stock-growing areas produce cattle, horses, hogs, sheep, wool, hides, and provisions in abundance; beet sugar is produced in great quantities; hemp and other fiber plants flourish in certain provinces; cotton is successfully grown in the extreme south; virgin forests promise an enormous lumber supply; coal, iron, and other minerals required for manufactures are believed to be abundant, and her mineral oil is so plentiful and cheap that it is freely used as fuel and is also becoming a serious competitor with our own in the markets of Europe and Asia.

With these natural supplies of all materials required for manufacturing, she is strengthening her industrial system, following closely the lines marked out by the United States, and now manufactories of cottons and woollens, iron and steel and their products, machinery, lumber, and other of the requirements of her people are being established and increased. Foreign capital is encouraged to contribute to this activity, and with her 125,000,000 of industrious, frugal people she seems likely to increase her ability to supply her own markets, and in certain lines may also increase her exports. When to these developments in the producing lines are added the new

transportation routes by which these supplies may be sent to the markets of Asia and Europe, and, indeed, of the world, putting rail in competition with water, and water again in competition with railway lines controlled and owned by the Government, and all these combining to bring undeveloped areas and resources into development, their importance to the commercial world and to the commerce of the United States seems worthy of consideration.

With the completion of the Russian-Chinese railway system (see *Commercial China*, in *Summary of Commerce and Finance* for March, 1899) the question naturally presents itself: What are the chances of Russian competition in this immense international market, where the standard of wants is, to be sure, low as yet, but where expansion of wants is sure to follow increased earnings and contact with European methods, and where there is now a growing demand for products of the United States?

Russia is already an important factor in the international oil and wheat market. It is therefore very important to know whether the opening of Siberia means also the opening of a new wheat-producing area. Is Siberia, as Nordenskjöld is reported as having said, the future wheat chamber of Europe, or are conditions such that for a calculable time at least the danger of Europe being flooded by cheap Siberian wheat need not be feared? That this question is not merely an academic one, but one of great practical importance, can best be seen from the fact that for the year 1897, notwithstanding the partial failure of crops in some parts of European Russia, the decrease of exported cereals was but 3 per cent below the figures for the normal year 1896, and that the shortage, according to official admissions of the Russian ministry of finance (*Messenger of Finance*, No. 36, 1898, Russian), was partly made up by the export of Siberian wheat, which during this year first reached the Baltic Sea ports and thence the foreign markets after the opening of the Samara-Zlatoust Railway.

Another phase of the same question presents itself in connection with the trans-Siberian railway. As is well known, this railway is being constructed and will be operated by the Russian Government. The fixing of railway rates, this powerful weapon of directing the channels of trade, will thus lie in the hands of the Government. If, as recent reports indicate, the cultivable wheat area in eastern Siberia is larger than has been assumed by the great authorities on the question, such as Kropotkin and Ballod, then the Russian Government has it in its power to put the Siberian wheat producer in such a position that he will be able to become a formidable competitor in the eastern market. A study of Russia's agricultural and industrial resources and its commercial policy and relations must therefore be of especial interest to the American people.

From another and equally important standpoint the developments in Russia, and particularly in Siberia, are of moment to the people of the United States. With increased developments come increased wants, and particularly in developments, such as are predicted with reference to those portions of Siberia likely to be opened and developed by the trans-Siberian railroad. Already this is being felt in an increased demand upon the manufacturers and producers of the United States. Exports from the United States to the Baltic ports of Russia in the nine months ending with March, 1899, were \$5,724,720, against \$4,302,509 in the corresponding months of the preceding fiscal year; those to the Black Sea ports were \$1,059,734, against \$663,382 in the corresponding months of last year; those to Asiatic Russia were \$1,101,960, against \$130,177 in the corresponding months of the fiscal year 1898, and \$154,559 in the corresponding months of 1897.

It is thus apparent that the developments in Russia, both as relate to manufacturing industries and the extension of railways and opening of new areas of natural production, are important to the people of the United States from a double standpoint.

When it is considered that the cultivable area of Siberia is now, by very conservative estimates, put at a total equal to the area of Missouri, Kansas, Nebraska, Iowa, North and South Dakota, it will be seen that its importance as a future grain producer is not inconsiderable, while on the other hand its future importance as a consumer of manufactured articles of the class now being exported from the United States is also worthy of consideration.

PRESENT CONDITION OF THE TRANS-SIBERIAN ROAD.

That a complete transportation line across Siberia connecting the Atlantic with the Pacific will soon be in active operation is evident. An examination of the accompanying map shows that the trans-Siberian road is now complete from its junction with the railway system of European Russia on the western border of Siberia to Lake Baikal, nearly two-thirds the distance toward the Pacific, and that the construction of 600 miles of track eastward from Lake Baikal will bring trans-Siberian trains to the navigable waters of the Shilka and Amoor rivers, which flow into the Pacific. Thus the construction of 600 miles of track will put into operation a complete rail and water transit system across Russia and Siberia, connecting the Atlantic with the Pacific, and thence to the ports of the great consuming countries of the Orient.

The Russian Government, however, will not rest content with the mere connection of its transcontinental line with the navigable waters of the Amoor and Shilka, but will push the railway itself along the banks of the river to connect with the Pacific coast section now constructed and leading to Vladivostok. It is also actively at work preparing to construct a direct line connecting the Siberian road through Manchuria with its recently leased ports of Talienwan and Port Arthur, in China, as shown by the accompanying map.

The total length of the trans-Siberian line is 4,950 miles and the date originally set for its completion 1905. It is expected, however, that through transit will be had much earlier than that date by utilization of the rivers already named, and that the shorter line connecting the system with the ice-free ports of Port Arthur and Talienwan may also be completed earlier than the original date of 1905. Traffic over the road is now in progress from European Russia eastward as far as Lake Baikal and across this by steamer, leaving at the present moment only 600 miles for transportation by wagons or sledges. Construction is now going on at the rate of about 330 miles per year, though this naturally varies according to the character of the territory through which the work is in progress. Passengers and mails from St. Petersburg to Vladivostok now require 45 days by the usually traveled route of the Suez Canal, Indian Ocean, and Pacific, while by way of New York, San Francisco, and across the Pacific the time occupied is 35 days. It is estimated that when the trans-Siberian road is completed the time occupied from St. Petersburg to Vladivostok, in China, will be about 10 days. The distance from St. Petersburg to Vladivostok or Port Arthur by the completed trans-Siberian line will be in round terms 6,500 miles, and to Port Arthur about 6,900, or about twice the distance from New York to San Francisco.

OTHER NEW RAILWAY PROJECTS AND THE ORIENTAL MARKETS.

Two other important railway projects, one nearly complete and another which is projected, seem likely on completion to bring the trade of Russia into closer relationship with that of the Orient, though touching it from two entirely different directions and sources. One of these is a railway line now nearing completion which is to carry the great trans-Caspian system to the western borders of the Chinese Empire; the other proposes to connect the trans-Caspian system with the Indian Ocean and thence by water communication with the eastern coast of China. The eastern extension of the trans-Caspian system, begun in 1895, extends that line, which is already a thousand miles in length, 350 miles farther eastward to a point near the western border of the Chinese Empire. One of the western dependencies of China is the vast section known as East Turkestan, while West Turkestan, which adjoins it, is a part of southeastern Russia. The trans-Caspian railway, stretching eastwardly from the great Caspian Sea a thousand miles, formerly terminated at Samarcand in central West Turkestan. By the project of 1895 work was begun for an addition of 350 miles eastward from Samarcand, carrying the line to Andijan, in the province of Ferghana, upon the eastern border of West Turkestan and bordering upon the Chinese possession of East Turkestan. While East Turkestan is a sparsely settled territory, the possible importance of this extension of the Russian system to the borders of China at this point is very considerable in its strategic and future commercial possibilities. Stretching eastwardly from Andijan, West Turkestan, the terminus of the line now being completed, lies a comparatively level section, through which caravan routes have for centuries extended, connecting China with Europe across this arid district. Along this caravan route the Chinese Government now maintains a telegraph line from Peking to the very point at which the new Russian line will terminate, while railway lines are already projected westward from Peking over a considerable portion of that distance. While it is scarcely to be expected that the eastward extension of the trans-Caspian system will result in an all-rail line to the Pacific for many years, it will, at least, touch the caravan route through which the inhabitants of that sparsely populated region obtain their supplies, and suggests the possibility, if not the probability of a Russo-Chinese intercontinental and international line paralleling the trans-Siberian at such distance to the south as to render it practically noncompetitive, the difficulties of such an enormous undertaking being no greater now than those which confronted the Russians a decade ago when they planned the trans-Siberian railroad.

The other and still later reported project looks to the establishment of railway lines from southern Russia across Persia to the Persian Gulf, giving direct transportation thence by steamship lines to the western Pacific and the markets of China and Japan. Recent publications indicate that the Russian Government has obtained control of the port of Bander Abbas, on the Persian Gulf, and with it the privilege of constructing a railway line from its trans-Caspian railway system across Persia to that point. Another and still more recent publication indicates that a railway line is being surveyed across Persia by Russian engineers at a point still farther west, to connect the railway system of southern Caucasus with the head of the Persian Gulf, thus realizing, should these reports be true, her long-cherished ambition for a direct outlet by rail and water to the Indian Ocean and the markets of the Orient.

The *Sviet*, of St. Petersburg, in an article in which it opposes the suggestion of a junction between the trans-Caspian and Indian railways as tending only to promote British trade in Central Asia and encourage political agitation, remarks:

Russia should occupy herself exclusively with establishing communication between her possessions in Central Asia and the Indian Ocean by means of a railway traversing Persia. This line and the Trans-Siberian Railway would then constitute two gigantic arms, with which Russia would encircle all the spheres of British interest in Asia, and would not allow England to extend her influence indefinitely at the expense of Russian interests. The line in question, connecting Russia by way of Persia with the Indian Ocean, would be of real use to Russia, while the junction of the Russian and Indian lines would be specially advantageous to the British Government.

METHODS OF TRANSPORTATION: RAILWAY LINES, WATER TRANSPORTATION.

Russia possesses a very extensive system of waterways. In European Russia alone (exclusive of Finland), according to Statesman's Handbook for Russia (St. Petersburg, 1896), the total length of rivers, lakes, and canals amounts to 102,689 versts (68,459 miles). For Siberia complete figures are as yet wanting, but there flow vast rivers, rivaling in their dimensions the most considerable rivers of America. Such are the Obi, with a length of over 3,500 miles, possessing an extensive basin, in which navigation is regularly maintained over a course of over 9,660 miles; the Yenisei and Angara (about 3,200 miles); the Lena (about 2,800 miles), forming with its affluents one of the richest water systems of the Old World; and, finally, on the Pacific slope the Amoor and its tributaries, with about 4,660 navigable miles. The distribution of the rivers is such that almost every province is either intersected by or adjacent to some river. At the same time, however, Russia's navigable rivers are much less extensive in proportion to the total area than those of other European countries. The official handbook gives the following data, showing extent of navigable waterways of European Russia:

NAVIGABLE WATERWAYS OF EUROPEAN RUSSIA.		English miles.	Per cent.
Suitable for floating rafts		15,977	23
Navigable downstream		7,475	11
Navigable up and down stream.....		23,079	37
Total		46,531	71

Out of these but 21,045 versts, or 14,030 miles, 20 per cent of the total extent of 102,689 versts (68,459 miles) are navigable for steamers. Thus Russia, to quote the handbook, for every 4,900 square versts, has but 38 versts of navigable waterways (up and down stream), or from three to four times less than Great Britain, France, and Germany.

Of artificial waterways, Russia possesses several systems which unite the basins of the Baltic and Caspian seas, those of the Baltic and White, and finally those of the Baltic and Black seas. Finally, in Siberia quite recently (1896), the Obi-Yenisei system has been completed "by means of which an immense water route over 5,000 versts long has been opened, traversing the whole of western Siberia from Tiumen to Irkutsk." Recent statements reprinted also by the American press, that the Russian Government contemplates the construction of a ship canal which is to connect the Baltic and the Black seas and is to be deep enough to permit the passage of war ships, are denied authoritatively by the ministry of communication. (See Bulletin Russe de Statistique Financière, Nos. 1 to 3, p. 188: Un Canal Imaginaire.)

The number of river craft, engaged in domestic transportation, according to the registry of 1896, amounted to about 20,000, made up of 2,500 steamers, with a tonnage of 211,000, and 17,000 other vessels, with a tonnage of 8,640,000 tons.

RAILWAYS.

The importance of railways as means of communication is now greater than that of the rivers and other water routes, as is shown by accompanying tables. The building of the trunk lines, with the exception of the St. Petersburg-Warsaw-Vienna, built during the years 1845-1848 and 1853-1862, respectively, and the St. Petersburg-Moscow (Nicholas line), constructed between 1843 and 1851, dates back to the decade between 1860 and 1870. These years witnessed the construction of the entire group of railways, with Moscow as their common starting point, viz: Moscow-Nijni-Novgorod (1861-1862), Moscow-Voronezh (1862-1869), Moscow-Volodga (1862-1872), Moscow-Kharkov (1866-1869), with its branch to Kief (1868-1870), and Moscow-Warsaw (1866-1871). Next in point of time comes the construction of roads connecting the black-soil region with its natural outlets, the ports of the Baltic and Black seas: Riga-Tsaritsyn (1861-1871), Kief-Konigsberg (1870-1873), Libau-Romny (1871-1874), and Samara-Viasma (1866-1871), all of which lead to the Baltic. Simultaneously, lines were built connecting each one of the more important southern seaports with the agricultural provinces. Chief among them are: The Odessa line, with its branch to Yelisavetgrad (1867-1869), and its Bassarabian branch (1871-1874), Kharkov-Nikolaiev (1869-1873), Kharkov-Taganrog (1869), Voronezh-Rostov (1861-1876), and, finally, Kharkov-Sevastopol (1869-1875). The Russo-Turkish war of 1878-1879 caused an almost entire suspension of railway building. It was only during the decade beginning with 1880 that activity in this field was again resumed, but the character and method of construction of the newly built roads changed abruptly. In place of the former trunk lines, connecting either the black-soil area with the seaboard of the Baltic, Azov, and Black seas, or with the central industrial region around Moscow, these years witnessed the construction of great strategic railroads, such as the trans-Caspian, the Polessie system, besides roads primarily destined for the service of relatively small though important industrial regions (Catherine line, Ivangorod-Dombrovo). Moreover, the system of granting franchises (concessions) was

superseded by the building and working of roads directly by and on account of the State. At the same time the redemption by the Government of great railway systems was going on, so that for some time it seemed as if all private roads were going to be acquired by the State. Although of late greater latitude has been given to private initiative, by far the greater part of Russian railways is in the hands of the Government. Out of 24,591 miles under the control of the ministry of communication, 16,453 are worked by the State, and 8,138 miles only by private companies (the trans-Caspian, 1,027 miles, being under the ministry of war).

The adverse years, 1891 and 1892, gave a new impetus to railway: "In order to give employment to the starving peasantry," the Government undertook and encouraged the construction of new roads. A new era of railway building began with these years, which, in its vigor, soon surpassed anything seen not only in Russia itself, but anywhere else in Europe. Thus, while during the above years the number of versts opened for traffic was but 123 and 419, respectively, the succeeding years mark the beginning of an exceedingly energetic expansion of the railway system, whose termination does not seem to be at hand even in the near future. According to figures given by the official Bulletin Russe de Statistique Financière (1898, Nos. 4 to 6, p. 452), there were opened for traffic during the year:

YEAR.	Miles.
1893.....	1, 124
1894.....	1, 136
1895.....	1, 230
1897.....	2, 900

For the year past, 1898, the Russian Messenger of Finance, the official organ of the finance ministry, gives 2,065 miles completed and opened for traffic. These figures include roads built not only by the State, which has its hands full in the construction of the grand trans-Siberian railway, but also by corporations whose activity now almost surpasses that of the early years of the decade beginning with 1870, the first period of great railway construction, when the building of roads, for some time at least, became the monopoly of a few private companies. At present franchises are eagerly contested by competing corporations, a fact unheard of until recently in Russia, where the State, not so very long ago, had yet to guarantee the interest on the stock and bonds of the chief railroad corporations. The ministries of finance and transportation have, during the latest years, been literally swamped with petitions coming not only from railroad and construction companies, but also from representatives of "local interests," as mining, manufacturing, and agricultural groups. The length of Russian railways has thus considerably increased during the last five years and surpasses now that of France and Great Britain, respectively, being inferior only to that of Germany.

According to a statement published in No. 9 of the Russian Messenger of Finance, 1899, the total length of all Russian railways (both in Europe and Asia) and those in Finland on January 1, 1899, amounted to over 29,070 miles as against 27,005 miles on January 1, 1898. This figure does not include roads under construction or for which merely franchises have been granted. Of all lines open for traffic the State operates 17,743 miles, private corporations 9,711, the remainder being made up of the State railways of Finland, 1,616 miles; but 5,335 miles were double track roads.

While thus the energy shown in the development of railway systems has been great indeed (by the end of 1893 over \$1,600,000,000 had been expended on the construction and improvement of railways), it must be owned that Russia is still much behind the other European countries if relation of mileage to population or to national area is taken into consideration. However, the ministry of finance, according to a recent statement of the St. Petersburg New Times (Novoie Vremia), holds under advisement the construction of over 23,000 miles, and among lines projected there figure such important ones as the St. Petersburg-Kief, St. Petersburg-Viatka, Moscow-Ufa, and Orenburg-Tashkent, of which the latter only is to be constructed by the State. In its review of railway building of 1898 the Messenger of Finance enumerates, among roads in process of construction by the Government, among others, the lines Samarkand-Andijan (335 miles), with a branch to Tashkent (97 miles); Tiflis-Kars (186 miles), and a number of branch roads which are to give better service to the different parts of the mining district in southeastern Russia (altogether, about 218 miles). On the Siberian railway the following sections are stated as not yet completed: The trans-Baikalian, with branches (948 miles); the Central Siberian to Irkutsk (671 miles); and the Oussuri (476 miles), besides the European section of the trans-Siberian railway, Perm-Kotlass, with branches (545 miles). If to this number be added the extent of railway construction by private corporations, which, as was said above, was never greater than it is at present, then a total number of over 7,000 miles is reached, whose completion may be expected within the first years of the coming century.

An interesting feature of Russian railway growth deserves to be mentioned—the tendency toward concentration and consolidation of the railway property under private management. According to figures given by W. G. Mikhaylovski, in the transactions of the St. Petersburg Free Economic Society for 1898, instead of forty-four

private corporations, which managed all the private roads in 1886, there are now but seventeen, of which seven controlled 11,103 miles—98.2 per cent of all the 12,450 miles now under private management or construction.

Simultaneously with the redemption of the greater part of Russian railways the Government undertook the difficult task of regulating the railway tariffs both for passengers and goods. The principles adopted were those of the "zone" tariff, and the results of the innovation have been very encouraging, for both passenger and freight traffic have increased considerably since the introduction of the new tariff. (For movement of freights over railways, see accompanying tables.)

TELEGRAPHS.

Russia holds first place among European countries both in regard to length of its telegraph lines (80,665 miles) and to length of wires (195,330 miles), although the number of telegrams is exceedingly small, being but 12 telegrams per 100 inhabitants. (Figures for 1893, the latest attainable date). By far the greater part of all the telegraphs is owned by the Government.

AREA AND POPULATION.

To the great public on this side of the Atlantic, Russia until lately was practically an unknown quantity. It was but when the news of a projected trans-Siberian railway reached this country that interest in Russia among Americans began to show itself. The Russian Government itself tried to awaken interest and spread information about the country and its material resources in a five-volume report on the industries of Russia, an excellent work, to which the most prominent Russian experts had contributed. It is from this work mainly that the data in this study are derived.

The Russian Empire, including its Asiatic dominions, comprises an area of 8,644,100 English square miles. This is about five times the size of Western and Southern Europe combined, or about two and a half times the size of the United States. Out of this total, 51 provinces of European Russia proper cover, according to the data furnished by the first Russian census of 1897, an area of 1,902,202 English square miles, with a population of 94,215,415, which would give an average density of population of 51 persons per square mile. This average, however, is far from being a fair index of the different degrees of agglomeration in the various parts of Russia. The density is naturally greater in the industrial provinces, or those containing large city centers, as Moscow (189 per square mile), St. Petersburg (123 per square mile), the Polish provinces (193 per square mile), and the so-called black-soil region, in which almost all provinces show a greater density of population than 100 per square mile. On the other hand, Finland and the immense sub-Arctic region bring down the more favorable average of density shown by the central and southern parts of European Russia. Thus Finland has only an average population of 20 persons per square mile, while the province of Archangelsk, with an area double that of all the States of the North Atlantic division (i. e., the New England States and also New York, New Jersey, and Pennsylvania), has but an average density of one person per square mile.

In the Asiatic dominions the twelve provinces of the Caucasus contain an area of 180,843 square miles, with a population of 9,248,695, the average density thus exceeding that of European Russia (54 as against 51 persons per square mile). The rest of Asiatic Russia is very sparsely populated, with the sole exception of the fertile and artificially irrigated oases of Turkestan, with its ancient and original civilization. "The Asiatic dominions of Russia may still be considered a huge reserve of free land, and present a wide field of enterprise for emigrants from European Russia." (D. P. Semenonev, in Vol. III of *Industries of Russia*, p. 33.) Siberia shows exactly the same density as that of Archangelsk (1 person per square mile), though here, again, the central and more southern parts (the so-called governorship-general of the Steppe and Turkestan) present a better showing—4 and 15 persons, respectively, per square mile. The entire population of Asiatic Russia, with an area of 6,564,778 square miles, constitutes but 22,697,469 persons, giving thus an average density of but 4 persons per square mile. The population of the total Empire, both in Europe and Asia, is 128,932,173, which would make the average density for the Empire about 15 persons per square mile. Out of this total population of almost 129,000,000 but 16,280,978, or about 13 per cent, live in towns, although it must be said that the general law of progressive concentration of the population in city centers applies to Russia as well. Professor Miliukoff, in his *History of Civilization in Russia*, shows conclusively that the growth of city centers dates back only to the years following the Crimean war, when Russia, after its defeat by the European allies, began the modernization of its means of transportation and other industrial agencies. Still the relative economic and social backwardness of the country can be seen by the following comparison: While in England and Wales, according to the latest data given by the *Statesman's Year-Book* for 1899, 71.7 per cent of the total population lived in urban sanitary districts, in Germany 49.9 per cent in towns with over 2,000 of population (according to the data of 1895); in France, 37.4 per cent in towns with over 2,000 (data of 1891); and in the United States 29.2 per cent in towns with over 8,000 (data of 1890), the rate for Russia is but 13 per cent, and this for all towns, some with a population of even less than 1,000.

AGRICULTURE: PRODUCTION AND EXPORTATION.

Russia's agricultural productions are more varied than those of perhaps any other country except the United States. Corn, wheat, rye, millet, flax, hemp, beet sugar, tobacco, and cotton are produced in quantities sufficient not only to supply the demand of her population, but in many cases for exportation. The wheat crop of European Russia in 1897 was, according to the Statesman's Year-Book for 1899, over 6,600,000 tons; rye, over 14,000,000 tons; barley, more than 4,000,000 tons; oats, 7,500,000 tons; potatoes, nearly 16,000,000 tons; flax, 290,000 tons of fiber and 645,000 tons of linseed; hemp, 300,000 tons of fiber and 370,000 tons of seed; hops, 650,000 hundredweight; hay, 33,000,000 tons. The annual product of tobacco ranges about 1,250,000 hundredweight, and in Turkestan, southeastern Russia, nearly a half million acres are now devoted to cotton, much of which has been planted from seed obtained from the United States and carefully selected with reference to locality, soil, and climate, thus increasing the production and quality and bringing the product into direct competition with cotton of the United States, at least so far as relates to the markets of Russia, the product of 1895 being over 2,500,000 hundredweight. Over 2,500,000 hundredweight of rice are grown annually in Turkestan and about 330,000 hundredweight of cocoon silk. The total value of cereals exported from Russia in 1896 was 323,177,000 rubles; of flax, 72,364,000 rubles; hemp, 19,212,000 rubles; seeds, 41,627,000 rubles; and of sugar, 11,830,000 rubles. The American Annual Cyclopædia for 1897 says:

Russia exports 51 per cent of the breadstuffs required by importing European countries, and the proportion of her exports compared with those of America increased in a marked degree between 1891 and 1896. The chief economic feature of wheat growing in Russia is the low cost of production, lower even than on the best virgin soils of the United States, due to the existence of a belt of rich, black earth extending across the southern part of European Russia and across the Ural Mountains into Siberia.

The exports of breadstuffs from Russia, including wheat, barley, oats, and flour, which in 1886 amounted to 278,547,000 poods, had by 1896 increased to 506,844,000, those of wheat alone increasing from 91,517,000 poods in 1886 to 219,589,000 in 1896. The exportation of raw flax increased from 7,110,000 poods in 1886 to 12,601,000 poods in 1896; raw hemp, from 2,361,000 poods in 1886 to 3,003,000 in 1896; oil cake, from 4,810,000 poods in 1886 to 17,513,000 in 1896; and oleaginous seeds from 10,346,000 poods in 1886 to 31,968,000 in 1896. Wool exports have decreased, probably owing to the increased consumption for manufacturing purposes, the exports of 1886 having been 2,525,000 poods and in 1896 only 1,012,000. Eggs form an important item of the agricultural exports of Russia, the exports of 1886 being 332,764,000 in number, and those of 1896, 1,475,000,000.

PROVISIONS: PRODUCTION AND EXPORTATION.

As a producer and exporter of provisions Russia occupies an important position and has future possibilities worthy of serious consideration. Her capacity for growing domestic animals exceeds in some particulars that of any other country. The reindeer thrives and finds useful occupation at the extreme north, and the camel at the extreme south, while in the intermediate section cattle, horses, sheep, and swine are produced in enormous numbers, with the possibility of an almost unlimited increase by reason of the great area suitable for their production. In Caucasus and Turkestan alone there were in 1892 6,500,000 head of cattle, 20,000,000 sheep, 1,000,000 swine, and nearly 500,000 camels, while the latest attainable figures show the number of cattle in European Russia at 25,000,000, sheep 45,000,000, swine nearly 10,000,000, and horses 20,000,000.

Hon. Charles Emory Smith, the present Postmaster-General, formerly minister to Russia, discussing this subject in the section of Johnson's Universal Cyclopædia devoted to Russia, Volume VII, says:

The raising of stock constitutes a very important branch of farming, sometimes intimately related to agriculture and sometimes an independent and exclusive occupation of the peasants. In the northwestern governments, in the Baltic provinces, and in Finland the most important branch is the dairy and the fattening of cattle for slaughter. In the southeastern districts and in Bessarabia work cattle and horses are of great importance, but sheep breeding for wool is also a profitable industry. In northeastern Russia the breeding of horses for work purposes heads the other departments of stock raising, but milch cows are also largely raised for the production of high-grade butter and cheese. In the central region the fertility of the soil precludes profitable herding on a large scale, but the breeding of milch cows, the fattening of fine beefs and hogs, and the raising of good trotters and of large draft horses are much developed. In the southern and southeastern steppe districts and also in the region of the Don herding is of great importance owing to the great amount of pasture land, but the most extensive branch there is that of herding fine-wool Merino sheep, exclusively confined to rich estates, the peasants raising as a rule only horned cattle.

The exports of animals, which in 1889 amounted to 12,597,000 rubles, amounted in 1897 to 17,092,000, and while the export of provisions has not up to the present time developed into considerable importance, the export possibilities of provisions in a country of such a large area and varied climate are worthy of serious consideration in view of the prospective increase in transportation facilities.

TIMBER: PRODUCTION AND EXPORTATION.

Russia has now the most important remaining area of the world's virgin forests. Enormous sections of northern Russia and Siberia remain yet untouched and capable of supplying the world with timber and lumber when they can be brought into market by rail and water. Volume V of the series, entitled *Industries of Russia*, issued by the Russian Government in 1893, says:

Siberia belongs to the number of countries abounding in forests. In western Siberia alone the area of forests belonging to the Crown is estimated at 110,000,000 dessiatines (297,000,000 acres); in eastern Siberia the area so occupied is considerably greater, while the Littoral-Amoor region is also rich in forests, consisting of very various and valuable species. The northern forest zone occupies all those regions of Siberia where agriculture is impossible from the deficient quantity of heat. The fixed population is insignificant. The forest-reaches of this vast zone have up to the present time been abandoned exclusively to the forces of nature, but preserve within themselves an inexhaustible supply of splendid building material. There are many localities where for tens and hundreds of versts in every direction stand clean plantations of pine which, with their interlaced summits, hide the sky. The absolutely naked trunks rising perfectly straight to an enormous height are so monotonous that a man who once chances into such a part of the Siberian taiga, or even a wild beast, can not find his way out again. Experienced native trappers are afraid to penetrate into one of these, in their opinion, enchanted spots, and they record every step they take by scoring the trees.

Recurring again to the statement of Johnson's *Cyclopædia* prepared by the former ambassador to Russia, Hon. Charles Emory Smith, from which quotations were made above, it gives the forest area of European Russia, Poland, and Caucasia alone at 498,000,000 acres, and says: "In this forest region of the north there are immense districts in which the only roads are the rivers flowing between interminable walls of trees," while the article on Siberia in the same volume, by Prof. Mark W. Harrington, says: "The forest area of Siberia is enormous. That of Tomsk and Tobolsk is estimated at 250,000 square miles, and probably this is only a third or quarter of the area for all Siberia."

While much of the valuable forest area of northern Russia is yet untouched and inaccessible for lack of transportation facilities, the increase in its value as producing an article of export is shown by the fact that the exportation of wood of all sorts, which in 1886 amounted to 24,195,000 rubles, were in 1897 54,781,000, having more than doubled during the period in question.

PETROLEUM: PRODUCTION AND EXPORTATION.

Among the industries which have developed most during the last quarter of a century, the mineral-oil industry, namely, of the Baku districts, stands foremost.

It is to the growth of this industry, and the hope of overcoming American competition, that Russians look forward. The opinion is expressed among Russians that the yield of American oil is on the decline, and that Russia, whose supply appears to be great, will eventually have a monopoly in the supply of oil in the world market. That the exportation of Russian oil is yet comparatively small may be seen from the fact that out of a total production of about 500,000,000 poods (1 pood = 36 pounds English), there were exported as follows:

[Figures taken from *Messenger of Finance*, No. 36, 1898.]

YEAR.	Poods.	Value.
1896.....	63,300,000	<i>Rubles.</i> 28,700,000
1897.....	62,700,000	25,200,000

As will be seen from this table, the exportation for the year 1897 has decreased as compared with the preceding year. This decrease, according to official admissions, is due to successful competition of the American oil in the European markets, and even more so to the greater demand for the residual products (for the purpose of fuel mainly) within the Empire itself, where petroleum is taxed since 1896 1 rouble per pood (51 cents per 36 pounds). The countries in Europe to which Russian oil is mainly shipped are the following:

COUNTRIES.	1896.	1897.	1896.	1897.
	<i>Poods.</i>	<i>Poods.</i>	<i>Rubles.</i>	<i>Rubles.</i>
Germany.....	1,553,000	1,335,000	1,091,000	533,000
Great Britain.....	7,887,000	4,989,000	3,490,000	1,490,000
France.....	2,433,000	2,450,000	719,000	747,000
Austria-Hungary.....	1,964,000	2,827,000	687,000	932,000
Belgium.....	1,703,000	569,000	803,000	208,000

As will be seen by this table, the Russian illuminating oils, while unable to hold their own against the American product in the German, English, and Belgian markets, are gaining ground in other European countries—as, for instance, Austria and France. In Germany the decrease appears much larger if the realized prices, not mere

quantities exported, are studied. Asiatic markets, the Chinese particularly, according to statements of the inspector-general of customs in China, in his 1897 report, seemed to be another battle ground for these competing products. "American oil," he says, "is finding vigorous rivals in Russian and especially Sumatran oil." In 1894 the imports into China were: American oil, 51,670,853 gallons; Russian, 17,500,283; Sumatran, 534,280; while in 1897 they were: American, 48,212,505 gallons; Russian, 36,924,125, and Sumatran 14,212,278, thus showing a slight decrease from 1894 to 1897 in the importations into China of American oils; an increase of 100 per cent in the imports of Russian, and a much larger percentage of increase in Sumatran."

The production of crude petroleum in Russia is now nearly equal to that in the United States, but the result in illuminating oil is far below that of this country. American crude petroleum supplies about three-fourths of its bulk in refined illuminating oil, while Russian petroleum produces but about three-eighths of its bulk in refined illuminating oil. The production of crude petroleum in Russia in 1897 was 2,260,572,000 gallons, against 2,560,335,000 in the United States, but the equivalent in refined illuminating oil was: Russia, 847,715,000 gallons; United States, 1,920,252,000 gallons. A table showing the production of petroleum in Russia and United States in each year from 1881 to 1897 and its equivalent in refined illuminating oil is presented on another page (2541) under the head of "Petroleum production in Russia."

COTTON: PRODUCTION, MANUFACTURE, AND EXPORTATION.

Cotton, as already indicated, is successfully grown in the southern sections of Russia, and its conditions and prospects as a suitable crop have been materially improved by the introduction of American cotton seed carefully selected with reference to locality, soil, and climate. The Statesman's Year-Book for 1899 says on this subject:

The cotton crops in Turkestan which covered, in 1888, 214,115 acres, and yielded 325,148 hundredweight of raw cotton, one-half of which was the American and the other half the local cotton tree, attained in 1895 to 469,800 acres, chiefly in Ferghana (351,000 acres), and yielding over 840,000 hundredweight of purified cotton (2,080,000 hundredweight of raw cotton). Khiva and Bokhara supply annually about 322,000 hundredweight. Attempts at raising cotton have also been made in Trans-Caucasia, the crop of 1891 attaining 2,900 hundredweight in Elisabethpol, and 200,000 hundredweight in Erivan; 9,833 acres were under cotton trees in 1892.

Manufactures of cotton are taking an important place in the industries of Russia, the value of her cotton-spinning industry having increased from 74,000,000 rubles in 1880 to 135,000,000 in 1893; weaving of cotton, from 99,000,000 rubles in 1880 to 160,000,000 in 1893; and the total value of the product of her cotton mills from 240,000,000 rubles in 1880 to 398,000,000 rubles in 1893, while the growth since that date has been very rapid, bringing the figures to a much larger total than those already quoted, though the information gathered on this subject by the recent Russian census is not yet available in detail. Meantime, cotton manufactures are becoming an appreciable feature of Russia's exports, the value of the exports of cotton manufactures in 1886 being 4,100,000 rubles, and in 1896, 9,199,000, having more than doubled in the decade in value, while in quantity the increase was doubtless much greater, owing to the general fall in values of the manufactures of cotton.

THE MANUFACTURING INDUSTRIES.

Upon this subject, Hon. Charles Emory Smith, in Volume VII of Johnson's Universal Cyclopædia, says:

It is only in very recent years that Russia has exhibited strength as a manufacturing nation at all commensurate with her importance in other respects. The patriarchal state of domestic economy under which each family was its own producer and consumer longer held sway there than in most other countries in Europe, and in many cases the breaking away was not noticeable until about the middle of the nineteenth century. But the vast and vigorous growth of manufacture began in the decade following the emancipation of the serfs (1861), expanding in the succeeding one, in which railway building was begun on a colossal scale. Manufactures including mining industries, amounted in value to 905,000,000 rubles (\$452,500,000) in 1878, and in 1890 the total valuation of the output reached 1,656,000,000 rubles (\$828,000,000), irrespective of the smaller industries of which statistics are unattainable.

The annual volume of Johnson's Cyclopædia for 1898 says:

Enormous strides have been made in Russian manufactures and industries whereby the output is now valued at 2,000,000,000 rubles.

The Russian minister of finance, M. Witte, in his annual report of 1897, says of the development of manufactures:

Among the prominent events in the economic life of Russia during the past year it is necessary to mention the Russian industrial and art exhibition at Nijni-Novgorod, originated at the desire of the late Emperor Alexander III. Started with the intention of verifying the progress attained by Russia and of showing what problems in the industrial development of the country required solution, the exhibition of 1896 fulfilled every expectation and yielded abundant material for the study of the present conditions and requirements of the various branches of our national industry. From the extensive labors of the committees of experts, in which several hundreds of scientists and practical specialists of various branches of industry took part, the Government obtained a plentiful supply of materials both for forming an opinion on the present condition of our industries and for working out measures for their further development. The experts' verdicts showed that since the last exhibition of 1882, almost every branch of our industry has progressed greatly, both in quality and quantity. During this period, under the shelter of a long peace, many perfectly new branches of industry have sprung up and expanded, while those that already existed have developed and grown stronger. It is enough to speak of the vast progress in metallurgy, manufacture of machinery, coal mining, and the petroleum, chemical, and cotton industries, in the

cultivation of cotton, in wine making, and in many other branches. Such cheering results are the consequences of the protective policy recently adopted by the Government. In the history of this system the measures taken in 1877, 1880-1885, and 1891 are specially to be noted. The payment of custom-house duties in gold, brought into force in 1877, increased the protection of all goods by 30 per cent, corresponding to the depreciation of the paper currency at that time.

The smaller industries alluded to by Hon. Charles Emory Smith in his Cyclopædia article include mainly the so-called "village," "kustar," or domestic industries, in which besides the head of the family, the other members, male and female, not unfrequently even children of 7 to 10 years of age, take part. There are according to the Statesman's Handbook of Russia (St. Petersburg, 1896), now in all over 50 distinct kinds of kustar trades, chiefly those connected with the manufacture of wood. There are as many as 80,000 households employed in making baskets, mats, wheels, carts, buttons, spoons, and even furniture. The northern flax-growing districts manufacture linen, tablecloths, and towels. The central districts take orders from the manufacturers for weaving the lower sorts of cotton goods. More than 150,000 men are occupied in the preparation of leather. As many as 19,000 peasant households are employed in the manufacture of hardware, particularly at Pávlovo (the "Russian Sheffield"), in the province of Nijni-Novgorod. Other important industries are the samovar industry in the province of Tula, the painting of holy images on wood, lace making, and the manufacture of toys. The entire value of the products of the home industries is practically unknown. Some estimate it at from 75,000,000 to 100,000,000 rubles, while others raise the figures to many times this sum. An equal uncertainty reigns as to the exact number of persons employed in this industry. Some investigators fix this number at 6,000,000, or many times larger than the combined number of factory hands and miners. That the existence of these industries has not proven and is not proving a serious obstacle to the rapid growth of the machine industry, and that, on the other hand, the above industries when meeting the competition of mechanical power and machines very soon degenerate to the condition of "sweated" industries, needs no comment. Their relative vitality can be best explained by the fact that the workers engaged in them as well as a large proportion of Russian factory hands, resort to the particular work in order to add to the scanty earnings derived from agriculture, their original and sometimes main occupation. It must be said, however, that at present in many instances agricultural pursuits are being more and more abandoned by them, the workers devoting themselves more exclusively to the purely industrial occupations in the narrower sense of the term.

Some remarks seem appropriate with regard to the figures given for the total output of manufactures first calculated by the celebrated Russian chemist, Professor Mendeleiev, reiterated by the present Finance Minister, and then reproduced by the greater part of foreign writers on this question. It is claimed on good authority that the figures given contain a great element of duplication and triplication, so that in order to get the true figures the amount given must be greatly reduced. Thus, for instance, it is pointed out that in some cases the value of cotton products and of wools is first calculated in their primary stage of yarn, then as texture, and finally sometimes as dyed or finished stuffs. In other instances, it is pointed out, the whole amount of an excise tax had been added to the value of excisable commodities. However this be, there can hardly be any doubt that the tendencies of Russia's modern industrial development are correctly stated in the report of the Russian Minister of Finance. Thus, for instance, the output of coal, according to figures given in the London Economist of April 22, 1899, has more than doubled within the last ten years, being 4,202,850 tons in 1885, and 9,700,000 tons in 1897. The average importation of raw cotton from 7,300,000 poods during the years 1889-1891, has risen to 9,900,000 poods in the year 1897, and this latter figure does not include yet the 2,500,000 to 3,000,000 poods now annually raised in central Asia and the Caucasus. Such facts and others, as the growing number of factory hands and the increase in the number of spindles in the cotton and woolen factories, are more reliable and trustworthy indices of Russia's industrial progress.

IRON AND STEEL—PRODUCTION AND MANUFACTURES.

The production and manufactures of iron and steel have grown very rapidly in the past few years, as have other branches of the manufacturing industries. The production of pig iron, which in 1880 was 448,000 tons, in 1896 amounted to 1,612,000 tons, or nearly four times that of 1880. Of iron in other forms the productions in 1880 were 292,000 tons, and in 1895 440,000 tons, the figures for 1896 not being available. Of steel, the products of 1880 were 307,000 tons, those of 1895 897,000 tons, while coal production increased from 3,289,000 tons in 1880 to 9,314,000 tons in 1896. The Statesman's Year-Book for 1899 says:

The province of Ekaterinoslav grows to be an important center of iron mining. In 1895 South Russia yielded 533,000 tons of pig iron, 35,000 tons of steel, and 194,000 tons of rails. The manufacture of agricultural machinery, which was valued at 2,250,000 rubles in 1867, rose to nearly 10,000,000 rubles in 1895, and has much increased since.

The growth in the production of iron in Russia is illustrated by the fact that despite the great increase in manufactures, imports of pig iron have fallen from 14,852,000 poods in 1885 to 3,793,000 in 1896, though the importation of higher grades of manufactured iron have increased meantime. Bars, blooms, rails, etc., increased from 3,226,000 poods to 8,560,000; iron in sheets or plates from 1,373,000 poods to 8,135,000, and steel in bars, rails, or sheets, from 563,000 poods to 4,427,000 poods during the decade, this increase being largely due to the growth of railroad construction and other developments of the higher-grade industries.

IMPORTS AND DEMAND FOR FOREIGN GOODS.

Russia as a market is of growing importance to the United States. During the fiscal year about to end our own exports to the Baltic ports will show an increase of fully 25 per cent, to the Black Sea ports more than 50 per cent, and to Asiatic Russia more than 200 per cent. The total exports to Russia in the fiscal year about to end will exceed \$10,000,000, mostly in manufactures. The demand for lines of manufactures especially produced in the United States is rapidly increasing. Her importation of agricultural machinery in 1886 was 1,325,000 rubles and in 1896 7,065,000. Engines and machinery, which in 1886 amounted to 14,628,000 rubles were in 1896 53,380,000, while imports of watches and clocks increased from 2,160,000 rubles in 1886 to 5,199,000 in 1896; metal wares, iron, steel, tin, etc., from 10,777,000 rubles in 1886 to 24,915,000 in 1896, while in the various manufactures of iron and steel the growth has been already noted.

That the products of the United States are finding favor with Russia and our market in that country is increasing is shown by the fact that the reports of the Russian Government place the value of imports from the United States in 1886 at 26,774,000 rubles, and in 1896 at 65,671,000 rubles, an increase of nearly 150 per cent, while the total importations into Russia during that period show an increase of but 30 per cent, the total figures for 1886 being 438,296,000 rubles and for 1896 589,810,000 rubles. No country showed during the decade so rapid an increase in her share of imports into Russia as did the United States. The imports into Russia from Germany in 1886 were 135,355,000 rubles and in 1896 190,170,000; those from the United Kingdom in 1886 110,071,000 rubles and in 1896 111,399,000; France in 1886, 12,274,000 rubles, and in 1896, 23,412,000; Austria-Hungary, in 1886, 16,996,000, and in 1896, 22,902,000; China, in 1886, 30,016,000, and in 1896, 41,457,000.

(For details of Russia's imports and exports see accompanying tables).

CURRENCY OF RUSSIA.

Under the régime of the present minister of finance the Russian treasury, or rather the State bank, have resumed cash payments in gold, after the Government had accumulated an enormous stock of gold, including \$70,000,000 of American extraction. According to the last bank statement, found in the Economist of April 29, 1899, the Bank of Russia, the only issue institution of the country, possessed a stock of gold equal to about \$475,000,000 and about \$25,000,000 worth in silver. The total volume of the circulating medium was composed mainly of about \$300,000,000 of credit notes, and a comparatively small, though constantly increasing, amount of gold coin, besides standard silver ruble and fractional currency, both silver and copper. Russia, then, has definitely adopted the gold standard, making the ruble (equal to 51.5 cents) its monetary unit, silver being coined but in limited amounts at the pleasure of the Government. Lately the Government decided to supplant the notes of lesser denomination by standard silver rubles (of $\frac{9}{16}$ fineness), leaving undisturbed the existing fractional currency (silver at $\frac{5}{16}$ and copper).

THE SIBERIAN RAILWAY AND ITS PROBABLE EFFECT UPON COMMERCE.

The approaching completion of the trans-Siberian railway naturally brings up the question of its economic importance for the country it traverses. As already shown, the population of Siberia amounts to about 5,000,000 people. This figure alone suffices to show of what development the country is yet capable in view of its enormous material resources. As a matter of fact, colonization more or less systematic has begun but recently, after the Government undertook its regulation and direction. Immigration, which during the eighties amounted to but ten to twenty thousand per year, has been steadily swelling since 1892, and reached about 200,000 in the year 1896. It is thus clear that Siberia contains an available area for the cultivation of cereals, for almost all these immigrants are agriculturists and continue their occupation on the new sites. The questions then to be answered in this study will naturally be the following:

First. What is approximately the area available for the cultivation of different cereals?

Second. What may be the probable increase in the production of cereals, due directly and indirectly to a completed railway?

Third. What are the possibilities of exports for the different Siberian products, particularly wheat, to Europe and more especially to eastern Asia?

Official estimates of the Russian Government given some twenty years ago put the cultivable area as high as 268,090 English square miles or 32.4 per cent of the total area for western Siberia and 653,760 square miles for eastern Siberia. Yadrintzeff, one of the best authorities on Siberia, while reproducing these figures in his work on Siberia, makes, however, the significant statement that these estimates have but "a relative value." Since that time the knowledge of Siberia among Russians has increased, with the effect that the cultivable area is being estimated lower every year and according to the most recent calculation constitutes but 8 or 9 per cent of the entire area, about 425,000 English square miles. As will be seen from these figures, it is rather premature to accept definitely any data until the results of the official survey now going on shall be given to the world. This work is proceeding rapidly. According to a statement found in Behm and Wagner's Geographical Annals, reproduced by Dr. Ballod, about 7,090,000 dessiatins or 18,900,000 acres have been surveyed during the years 1893 and 1894, and out of these 800,000 dessiatins or over 2,000,000 acres prepared for settlers.

AGRICULTURAL POSSIBILITIES AND PROBABILITIES.

In western Siberia the cultivable area is to be looked for in what the official report calls the "zone of cultivation," i. e., the region between 55° and $58\frac{1}{2}^{\circ}$ north (in the Altai region only to the fifty-first degree north), containing altogether about 340,000 English square miles, with about 2,500,000 population. Out of this total area a considerable part would have to be excluded, made up of marshes and moors, salt and sweet water lakes, particularly the so-called Barbara steppe, so that only about 127,500 English square miles here, and 65,000 English square miles in the Altai region might be regarded really cultivable land. Although the average yearly temperature is but zero Celsius (32° F.), such an average is due to the extreme winter colds; for the five months of May to September the average temperature is about $+14^{\circ}$ to 15° Celsius, or about the same as in European Russia under the same latitude. For settlement this part of Siberia presents, moreover, some advantages not to be found in the corresponding parts of European Russia and these are the relative wealth of forest and streams, more extensive natural meadows and a soil less exhausted. The amount of yearly precipitation however is considerably less for western Siberia than it is for Germany or Russia under equal latitudes, the yearly average in the agricultural zone being but 380 millimeters, as compared with 500 millimeters in the northern part of Russia. However, this circumstance does not yet present any danger to the cultivation of cereals, for the amount of precipitation during the three summer months is 175 millimeters, only 10 millimeters less than that for northern Russia. The agricultural zone in western Siberia shows about the same features as the regions of western Canada, Manitoba, Alberta, Saskatchewan; just as there a severe winter lasting six months is followed by a short transition period and a short and warm summer.

North of this agricultural zone there extends the forest zone. Agriculture is pursued there but sporadically, between the 59th and 60th degrees of latitude, and this only on the protected slopes, which suffer less from excessive moisture and summer frosts. By far the greater part of this region is forest desert—"Taiga" or swamp woods (Ourmans), out of which only here and there emerge meadows and arable grounds. For the purpose of this study the agricultural possibilities of this region, as well as the "Polar Region," to use the nomenclature of the official report, may be safely neglected. It is interesting to note that the number of domestic animals in western Siberia is much larger per head of population than in European Russia. There were about 1,400,000 head of cattle, 1,700,000 horses, and 2,300,000 sheep. For every 100 inhabitants in the zone of cultivation there are thus 63 horses and 52 cows.

South of western Siberia proper, between the fifty-fifth and forty-second degrees of latitude, extends the governorship-general of the Steppe, whose northern border is touched by the Siberian Trans-Continental. Out of the 530,000 English square miles taken up by these regions, the districts of Akmolinsk and Semipalatinsk (about 380,000 English square miles), while having a higher annual temperature, suffer, however, from lack of rainfall, so that agriculture can be safely carried on without artificial irrigation only in the northern border of this region, and also in the moister river valleys; but even there the crops often suffer from droughts. Dr. Ballod estimates the entire cultivable area of the two above-named districts at less than a million dessiatins, or about 2,700,000 acres. The rest of the Kirgis steppe presents, according to this writer, but pasture grounds of the worst quality. Even the northern slopes of the Thian-Schan, while showing more favorable climatic and soil conditions, could be made available for agriculture only if properly irrigated. The average temperature for the seven months (April to October) is about the same as that of northern Italy; cereals ripen just as there, about the beginning or middle of June, and, provided there is sufficient irrigation, another harvest of leguminous crops becomes possible in the fall. It is estimated that about 20,000 English square miles could be gained for agricultural purposes by systematic irrigation. The number of domestic animals is here even greater than in western Siberia, cattle constituting the only wealth of the nomadic Kirghiz. There are about 1,800,000 horses, 1,000,000 head of cattle, and about 10,000,000 to 11,000,000 sheep.

As regards the agricultural possibilities of eastern Siberia, or the provinces of Yenisseisk, Irkutsk, and Yakutsk, it must be said that the area available for cultivation is even smaller there than in the west. Owing to the mountainous, precipitous, in some parts exceedingly cold and swampy character of the country, only a little over 100,000 English square miles are regarded as fit for cultivation. Climatic conditions are less favorable here than in the west, the yearly amount of rain and snow-fall being but 360 mm. and for the summer 150 (instead of 175, as in the west). As a matter of fact, even the region most favored for wheat cultivation, the district of Minussinsk (a little over 40,000 English square miles), with an average temperature of 15.5° Celsius during the vegetation period, had already to resort to artificial irrigation. It is interesting to note that in this district beginnings have been made with the cultivation of the sugar beet, which have given good results, the raw sugar thus gained being refined on the spot. The zone of cultivation in eastern Siberia, it must be said, is on the whole richer in forests than the corresponding zone in the western part of Siberia. The mountains and mountain slopes particularly are covered with dense forests; extended grass steppes (prairies) are to be found only in the district of Minussinsk; but even these latter do not lack entirely forest growth. In some parts they even contain excellent soil; some, however, present but desolate, cheerless alkali, or sand deserts.

As regards the forest zone and the region of sporadic agriculture, it extends in eastern Siberia two degrees higher to the north than in western Siberia. Although the average temperature is lower than in the west (-3° Celsius instead of -2°), yet the summer is one degree warmer (15° Celsius as against 14°). On the other hand, the period of vegetation has but an average of $+11^{\circ}$ Celsius, thus being less favorable for cultivation than the corresponding period in western Siberia. The amount of precipitation is about 400 millimeters, of which one-half falls to the summer, and it is this relatively high summer temperature, coupled with abundant precipitation, which even under so high latitudes permits still of the growth of tall-tree forests, whereas in North America (on the Hudson Bay and in Labrador), with an equal average temperature, the northern boundary line for forest growth lies ten to twelve degrees more southward. The area of this region is enormous, about 1,380,000 English square miles. Its value for agricultural purposes, however, is altogether insignificant, since night frosts occur normally even during the summer, thus making agriculture too precarious an occupation. The population of eastern Siberia numbers about 900,000; that of the Yakutsk region alone about a quarter of a million, the greater part being indigenous nomadic Bouriards. The stock of domestic animals is greater than in the west; thus, in the agricultural zone of eastern Siberia for every hundred of population there are 72 horses, 70 head of cattle, and about 135 sheep; altogether, 640,000 horses, 630,000 head of cattle, and about 2,000,000 sheep.

Of greater importance for agricultural purposes is the trans-Baikalian district (south of eastern Siberia proper), which contains an area of about 230,000 English square miles and almost entirely falls within the cultivable zone. The extremely mountainous character of this district, intersected as it is by the Stanovoi range, reduces, however, the really cultivable area to about one-third (about 85,000 English square miles). The climate is extremely continental, the yearly average temperature, even within the cultivable region ($-2\frac{3}{4}^{\circ}$ Celsius), hardly exceeds that of the forest zone of eastern Siberia; the summer, however, is a little warmer than the corresponding period within the agricultural region of eastern Siberia ($+17^{\circ}$ Celsius and 16.5° , respectively), this advantage being set off by the lower temperature during the vegetation period proper (13.5° Celsius). Even with such a temperature cereals can ripen fully because, on account of the more southern geographical situation of the country, the sun's rays fall more vertically, and also because the sky is less covered with clouds during the year than in eastern or western Siberia. The amount of precipitation during the summer is nevertheless quite high, reaching 200 millimeters (as against 150 millimeters in eastern Siberia), being by far the greater part of the total yearly precipitation. This fact—i. e., because the greater part of precipitation occurs within the vegetation period—enables agriculture to be carried on pretty safely. This region, as a matter of fact, is regarded by the Russian Government as the prospective "chief granary of the whole Amour-Littoral region" (p. 57, vol. 5, *The Industries of Russia*). On account of the cold, snowless winters, only summer or spring cereals can be cultivated. For a population of about 570,000 human beings, of whom 170,000 are indigenous Bouriards and Tunguz (mainly nomads), there are 400,000 horses, 570,000 head of cattle, and about 2,000,000 sheep.

Quite different features in regard to soil, climate, and vegetation are presented by the regions of the Amoor and the Ousoury, both on the Pacific coast. For while eastern and western Siberia suffer very often from droughts, the Amoor region suffers from excessive humidity, which is unfavorable to agriculture. The natural fertility of the soil is not great. Although harvests obtained on virgin soil are abundant, yet the crops are bad in quality and but little nutritive. Diverse mountain ranges crossing these regions and very wide swamps reduce the cultivable area to over 40,000 English square miles (out of a total area of 200,000 to 225,000 English square miles). Although the average temperature for Blagovestchensk, for instance (50° north), is still below 0° Celsius, yet the average summer temperature is $+19^{\circ}$ Celsius and that of the vegetation period $+15.6^{\circ}$ Celsius. For the lower part of the Amoor these figures become less favorable. Thus, the temperature of the vegetation period goes down to 11.6° Celsius, rendering the cultivation of any cereals almost impossible. The excessive amount of precipitation, over 500 millimeters (as against 290 millimeters for the trans-Baikalian region), out of which 290 millimeters belong to the three summer months, favor a luxuriant growth of wild vegetation. All the lower slopes of the mountain ridges are overgrown with weeds, and the upper declivities with trees, which so powerfully arrest the moisture that the soil does not dry up. Here and there grassy plains occur, particularly in places subject to the inundations of the Amoor. These inundations prove a further hindrance to agriculture, since the river, when receding to its normal bed, leaves a great mass of swamps and pools, which by their evaporations and moist fogs exercise a most unfavorable influence upon the growth of cereals. These latter, when sown upon clearings, although running to straw of incredible height, frequently yield but a poor grain, sometimes not ripening completely.

Almost the same characteristics apply to the Ousoury region, extending along the coast of the Pacific. The climate, although warmer (the temperature for the vegetation period being 17° Celsius), yet shows the same peculiarities with reference to excessive moisture as the Amoor region, the averages in this regard (ranging all the way from 336 millimeters for Vladivostok up to 1,024 $^{\circ}$ for the Olga Bay) being on the whole still less favorable to agriculture than those for the Amoor region. In certain localities, notwithstanding peculiar methods of cultivation, especially adapted to the dampness of the soil, a development of sporiferous plants or microfungi takes place on the ears of the grain, so that bread baked from the flour of grain stricken with these blights becomes intoxicating,

producing in fact such symptoms in those who eat it. This inconvenience, called forth by climatic conditions, sometimes even causes immigrants to abandon the "spots which produce intoxicating bread." (P. 67, vol. 5, Industries of Russia.) The entire area capable of cultivation is estimated at a little over 63,000 English square miles. But while the outlook is far from encouraging for the raising of cereals, leguminous plants, such as peas and beans, vetches, potatoes, and a certain species of millet called "Buda" thrive moderately well both in regard to quantity and quality. This has caused a Russian explorer, Professor Krasnov, to assert that the prosperous development of the country depends on whether the settlers could become used to feed to a great extent on millet, which in the course of time could be as well exported to the overpopulated regions of neighboring China, where millet constitutes an important article of food.

The official report notes some improvement of the agricultural conditions for the last forty years, and expresses the idea that with the progressive rooting out of forests and drying up of the swamps more favorable conditions for agriculture would originate. Yet it has to be borne in mind that some influences, such as geographical proximity to the sea or the ruinous inundations of the great rivers, could not be changed by such work of man as is approvingly pointed out by the Government. The proximate effects, for instance, of clearing the forests would, as Dr. Ballod justly remarks, be still vaster and more ruinous inundations by the rivers. Such ravages might, of course, be prevented by a system of dikes and dams, but this would imply an outlay unprecedented in the history of public waterworks. Greater possibilities are perhaps open to the development of the cattle-raising industry, although here, as well as in the rest of Siberia, the general statement (p. 111, vol. 5, Industries of Russia) must be borne in mind that the low nutritive value of forest herbage, as well as of the natural meadow grass, makes it necessary in the greater part of Siberia to expend much more hay and grazing space upon rearing cattle than would be required under similar circumstances in European Russia, and, for that matter, in the rest of the world. In any case, there can hardly be any doubt that with present primitive, exceedingly extensive, methods of cultivation ("rapacious," as the report terms them) no cereals can be produced for export, because the quality of the crop raised turns out too bad. Whether the application of animal or mineral manuring would improve the quality is a question which has never yet been answered.

There remains but an examination of the agricultural possibilities of the island of Sakhalin. These possibilities, according to all reliable reports, can be safely put down as *nil*; fisheries on the eastern seaboard of the island, coal mines, and mineral oil wells, these are the main resources of the island.

TOTAL CULTIVABLE AREA OF SIBERIA.

Summing up the figures given for the cultivable areas in the different parts of Siberia, we get a total of about 425,000 English square miles. This total would still be equivalent to the combined areas of Iowa, Missouri, Kansas, Nebraska, and both Dakotas.

PRODUCING QUALITIES OF SOIL.

As regards the properties of the cultivable soil very little is yet known. The quality varies greatly in the different parts and even in the same regions. At the outset it should be remembered that Siberia has been under cultivation for over two hundred and fifty years; that the settlement of the more hospitable regions has been accomplished long ago; that the most fertile regions have been preoccupied, so that new settlers have to crowd in among the old ones, who are by no means willing to cede to the newcomers the best parts. There are no thousands of unoccupied acres of fertile, virgin soil, as in North Dakota or Manitoba. Another fact which is being more and more corroborated by recent investigators is that the Siberian black soil on the whole does not possess the thickness and fertility of the Russian black soil region and that the traditional fabulous yields are either a myth or a matter of the past. It is true that at times the Siberian crop yield reaches dimensions which are attained only on lands with intensive cultivation, but such yields are relatively rare and are more than offset by total failures of crops, which often happen even on soils of the best quality. Another point which must be borne in mind is that in the more thickly settled portions, as, for instance, in the province of Tobolsk, fertilizing is applied in almost all parts. It is not proposed to go into the technical details, as the humus capacity and thickness of the arable soil, for which the reader may turn to the official English publication of the Russian Government. Enough, however, has been said to warrant the conclusion that the Siberian soil in very rare cases only compares with the black soil of European Russia: as a rule the soil of the cultivable area in Siberia can be characterized as being of but mediocre quality. For the cultivation of wheat, which alone may be able to bear the high cost of transportation to the world market, hardly one-half, i. e., the more southern part of the cultivable area, would seem to be available. These are the extreme south of the province of Tobolsk, the Ishim steppe mainly, the more northern, rainier parts of the Kirgizian steppe, the agricultural zone on the slopes and foothills of the Altai and in the district of Minussinsk, besides some few parts of Transbaikalia. In the middle agricultural zone of the province of Tobolsk summer rye, oats, and barley are mainly raised; in the middle and northern parts of the cultivable zone in eastern Siberia the loose, black soil favors the cultivation of winter rye. Along the Siberian

caravan route, the so-called Great Siberian Tract, oats constitute the chief crop, being in steady demand as fodder for the 80,000 horses that frequent this artery of communication, now to be superseded by the Siberian Railway.

On the whole, it must be said that the cultivation of the soil in Siberia is more thorough and satisfactory than in European Russia, for the simple reason that the peasant possesses a greater number of live stock, and his relative well-being permits the use of better implements. This greater prosperity showed itself also in the relatively high proportion of cereals consumed by the peasant himself, amounting in the province of Tobolsk to about 66 per cent, leaving but 34 per cent available for the market. This latter share is higher in the province of Irkutsk, viz, 41 per cent, and still higher in some parts of Minussinsk and in the Altai region, viz, 50 per cent. The total crops of Siberia for an average year are given by official estimates as about 160,000,000 poods, of which 85,000,000 fall to the share of western Siberia. According to these calculations, the Siberian harvest reaches but about one-twelfth of that of European Russia. The corresponding figures in the Statesman's Year-Book for 1896 are 43,630 tons (European Russia), as against 15,272 quarters for four provinces of Siberia. The amount, however, to be deducted for seed grain is considerable, as for winter grain the yield is not more than sixfold, for spring grains even less (four to fivefold), about as much as in European Russia, and this notwithstanding the greater freshness of the soil. There were exported during the last years about 10,000,000 to 12,000,000 poods from western Siberia, where the great rivers, as the Obi, Irtysh, and Tobol, presented convenient means of communication up to the Ural. For the year 1898, however, the amount of Siberian wheat which actually reached the west European border (i. e., Prussia and Austria) or Russian ports of export is given as ever 40,000 carloads, which, multiplied by 600 poods, would give 24,000,000 poods exported to Europe. (Messenger of Finance, 1899, No. 9.) The rest of the marketable cereals has been consumed within the country itself, mainly by the mining districts, particularly the places of gold-washing, by the towns and northern forest regions, which all purchased part of their cereal supply from the agricultural zone; distilleries are now using up about 3,000,000 poods of flour, the Great Siberian Tract consumed a few million poods of oats, and, lastly, the nomadic Kirgiz of the steppe provinces received cereals from the Russian settlers in exchange for their cattle.

CATTLE RAISING AND DAIRY FARMING.

Some remarks would seem appropriate in regard to the possibilities of animal industry and dairy farming. As was seen above, the relative number of horses, cattle, and sheep per unit of population is larger than for European Russia, and although the cattle raised are of the most inferior grade and but small in size (a full-grown cow has a carcass weighing from 5½ to 7 poods—1 pood equals 36 pounds—rather lean, and yields a correspondingly small amount of milk), yet butter prepared by the peasants is even at present shipped to European Russia, and there is no reason why, with better transportation facilities, this product might not find its way East as well as West. Sheep are even more inferior of grade, their wool and carcass are poor, and are used mainly by the peasants themselves. Only kirghizian sheep are being exported, which furnish a good deal of tallow used in the manufacture of candles.

FOREST WEALTH.

As may be seen from the above survey of the country, Siberia is preeminently rich in forests. The forest zone contains about 2,000,000 English square miles of forest area, and for western Siberia alone the area of forests belonging to the Crown is estimated at about 300,000,000 acres. All this vast timber supply is practically untouched, and its possibilities, both for home consumption and exportation abroad, are enormous. The great drawback (lack of transportation facilities), which Dr. Ballod seems to regard as well-nigh insuperable, will no doubt be overcome in time, when with a denser population the industrial uses of timber will spread more and more. The forest vegetation is various, but conifers prevail, especially in the mountain woodlands, such as the larch, pitch pine, pine, and cedar, the birch prevailing in the Steppe portion of Siberia. The important fact, however, should not be overlooked, that the chief forest wealth is situated in the northern part, on the lower course of the great rivers, ice-bound ten to eleven months during the year.

MINERAL WEALTH.

The mineral wealth of Siberia is more particularly described in the annexed article of Mr. N. J. Stone. According to recent information rich layers of coal and iron ore have been found in more than fifty places along the great trans-Siberian road, and among others extensive coal mines at the northern slope of the Altai, in the district of Kusnetzki.

PROSPECTIVE INCREASE OF WHEAT PRODUCTION.

As already shown, the estimated annual yield of crops amounts to 160,000,000 poods for all Siberia, while the entire cultivable area is estimated at about 425,000 English square miles. With an immigration of, say, 200,000 persons per year going on steadily for years to come, the a priori possibilities of a marked increase of

the cereal production are apparent. From the export figures of 1898 it is seen that under favorable conditions, such as better prices on the world market and simultaneous partial failure of crops in European Russia, the importance of Siberian grain may grow very quickly. On the other hand, however, there are a number of limitations, already stated in part, which, for years to come at least, will cause disappointment to those who expect Siberia to become a powerful factor in the cereals supply of the world after the completion of the great transcontinental railway.

Apart from the purely natural factors, such as climatic conditions, natural fertility of the soil, which, as has been seen, are far from favorable to a rapid extension of the agricultural area, there are yet social and economic factors which should by no means be neglected. First, the fact noted that the best soils are already preoccupied. It might be said that the word "best," economically speaking, has but a relative meaning; that the construction of a railway or any other circumstance that brings the place nearer a market affects the economic value of the land, and that changes of agricultural methods have very often changed the places regarded as having no agricultural value whatever to highly prized agricultural areas. Now, there can be no doubt that in the greater part of Siberia the agricultural methods used are yet very low. "But how could a mass of primitive and uneducated peasantry be moved to abandon within a short period a system to which it has clung for centuries?" (Leroy Beaulieu, in the *Économiste Français*, October, 1897.) Assuming the present tide of immigration to go on undiminished for the coming twenty-five years; furthermore, that all this immigration is to be made up of agricultural elements; then the occupation of the available cultivation areas would go on at a very rapid rate, provided the present standard of allotment is continued by the Government during the entire period in question, as can be easily established by simple calculation. Supposing the agricultural population to have doubled at the end of twenty-five years and the cultivable area to have increased even 25 per cent, we may calculate the Siberian harvest, with present methods of cultivation remaining stationary at from about 400,000,000 to 500,000,000 poods (1 pood = 36 pounds English). It must not be forgotten, however, that the industrial population will increase proportionately if not more, so that only about the same ratio as at present will remain for export. Without going into tedious calculations, which at best would be but conjectural, it might be stated that for the coming thirty or forty years Siberia's chances of becoming the "granary" of the world and a serious competitor of American wheat are not great.

OTHER AGRICULTURAL PRODUCTS.

The eastern parts of Siberia, the Littoral region more particularly, already shown, can not be regarded as a hopeful wheat area; more likely is the production and exportation of considerable quantities of millet to neighboring China. In the more southern regions, the Semiretchie, and those of the Syr-Daria and Amudaria, however, the possibilities for cotton cultivation are great, particularly after the completion of the projected irrigation system, and it is quite likely that Russia will soon raise there all the cotton required for its manufactures both for consumption at home and for export to the East. It is to the transportation of these and other manufactured goods eastward, as well as silks, furs, butter, meat, tea, and cereals westward, that the Siberian Railway may owe its financial success, if any awaits it. That the prospective eastward wheat shipments from the Transbaikalian region will be sufficient to make the eastern part of the Siberian and the Manchurian railways a profitable investment from the purely financial standpoint is more than doubtful. The Government itself expects this region to become but "the chief granary of the Amoor Littoral region."

The same remarks apply to the transportation of bulky articles, such as coal and iron, which will scarcely ever be able to bear the high cost of land transportation to China, whatever the optimistic views now expressed on the subject. The prospects of developing an iron and coal industry close by the Chinese border are not superior to those of developing the same industries in China itself, where ore and coal are known to exist in larger quantities than in Siberia.

POSSIBLE INCREASE IN QUALITY AND QUANTITY OF SIBERIAN IMMIGRATION.

Recent reports from Europe state that the Russian Government contemplates a complete cessation of the transportation of convicts, political or otherwise, to Siberia. Should this prove true, and especially should it be accompanied by further encouragement of emigration from the densely populated regions of European Russia to Siberia, a marked improvement both in number and character of immigrants into Siberia might follow, and with it a more rapid development than has been expected from those already occupying its populated areas.

PROSPECTIVE COMMERCIAL EFFECTS OF THE SIBERIAN RAILWAY.

Summing up, the main conclusions would be:

1. The Siberian railway by facilitating immigration will contribute to a speedier settlement of the available area of cultivation, provided the Government favors an energetic colonization policy; for the years immediately following the construction of the railway the importance of Siberia as a competitive area will be small, though steadily increasing, sending its wheat rather West than East.

2. Its importance in the development of great industries, such as mining, iron, and gold, may be greater, as enabling the placing in the proper localities of European and American capital; also the transportation for greater distances of the output of these industries.

3. The railway will most likely in the near future become the mail route and the great highway of travel between Europe and the Orient because of the economies of time and money, respectively, as compared with the steamship routes over Suez and the Indian Ocean.

4. With the further industrial development of Russia, the railway may serve the purposes of industrial expansion—i. e., the conquests of markets for Russian manufactures—already begun at the expense of England. Its greatest importance is, of course, of strategic character, as tending to enhance the political influence of Russia in the far East—a question that naturally falls outside the limits of this study.

AGRICULTURAL, MINERAL, AND MANUFACTURING RESOURCES OF SIBERIA.

[BY N. J. STONE.]

With all the difference in the outer forms of political constitution and forms of government, one can hardly find two other civilized countries so similar in their geographical, economic, and other essential features as the United States and the far-away land of the Czar. Though one a Republic, and the other an unlimited despotism, they have both got rid of slavery but yesterday and almost simultaneously, the emancipation proclamation of Alexander II having been given to the world on the 3d of March, 1861, that of Abraham Lincoln on January 1, 1863. Both are primarily agricultural countries, and are destined to remain such, owing to their vast areas of fertile land, situated on the opposite sides of the globe. Although the Republic is far in advance of its agricultural rival in industrial development, she, too, like the latter, is the youngest member in the family of capitalistic nations, both having started on their career of building up cities and manufactures after the abolition of slavery and serfdom respectively, and each but beginning to force her way and gain recognition in the great marts of the world.

They are the only two countries stretching in one unbroken expanse from the Atlantic to the Pacific, Russia's western frontier beginning at the Baltic Sea, which is but a part of the Atlantic. This gives them the strongest foothold on the Pacific that any nation of the white race can lay claim to, since the possessions of other nations on the Pacific are but distant colonies, the retention of which is always more or less a problematic matter, of which not even a superficial student of English history needs to be reminded. If we bear in mind that the Pacific is ever gaining in importance in the world's commerce, that it touches the two continents which contain at present nearly two-thirds of the total population of the world; if we consider the enormous possibilities hidden in the now awakening peoples of Asia, in the ever progressing, still practically unsettled countries of America, in the construction of the canal that will soon cut this hemisphere in two, and in the opening up of the great Siberian railway; if we think but for a moment that at the present rate of growth the Anglo-Saxon and Russian will be the greatest, numerically, nationalities in the white family a century hence, we can see before us a picture of a not very distant future which by its grandeur, originality, and gigantic proportions exceeds everything the wildest imagination of a poet has ever conceived.

It is this that lends to Russia and all things Russian that peculiar interest in the eyes of the intelligent American which other countries do not enjoy in his eyes. And if in the ears of the average Russian the name "America" sounds like the embodiment of political freedom, manly independence, and self-assertion, the solemn declarations of historical friendship and like sentiments which are frequently forthcoming from the mouthpieces of the Russian autocracy are by no means due to sentimental feelings, of which no autocracy has ever been capable, but to considerations of the great political rôle the transatlantic Republic is bound to play in international affairs for reasons outlined above. And just as she was assisted at her birth throes by the greatest autocrat then ruling in Europe, so will the now powerful Republic in all probability not fail to utilize all the advantages that will be offered to her by the White Bear after she has turned a new leaf in her history.

While by no means inclined to underestimate the strength of other nations and the possibilities lying in the great colonial acquisitions they are making in Africa and in other tropical countries, we wish to point out that the adaptability of all these lands to the ends and desires of the white race, as well as the adaptability of the latter to the tropical countries, with their unhealthy climate, threatening the health and life of the settlers, is still a question to be settled, while just the opposite is true of the greater part of the unsettled areas of America and Russia.

AGRICULTURAL RESOURCES AND PROSPECTS.

The quick opening up of the western prairies and plateaus of this country, for which we can hardly find a precedent in history, had been due not only to the liberal policy of the American Government, which allotted to every settler a piece of land, nor to the abundance of a working population, coming from a relatively overcrowded continent and anxious for just such opportunities as opened themselves in America, but also to the fact that the new country they now came to occupy differed little, if at all, from the homes they had left, in point of climate, topography, and physical surroundings. Whatever difference there was, was in favor of the new home, such as greater fertility of the soil, more elbow-room, etc. In the case of Siberia, it is history repeating itself. The boundless area of Siberia is a point which can not be dwelt upon too much. Probably the figure of 5,500,000 square miles does not convey as graphic an idea to the mind of the reader as the excellent illustration based on actual figures for the respective countries which Mr. Kennan gave more than ten years ago, and which we quote here in full:

If it were possible to move entire countries from one part of the globe to another, you could take the whole United States of America, from Maine to California and from Lake Superior to the Gulf of Mexico, and set it down in the middle of Siberia without touching anywhere the boundaries of the latter territory. You could then take Alaska and all the States of Europe, with the single exception of Russia, and fit them into the remaining margin like the pieces of a dissected map; and after having thus accommodated all of the United States, including Alaska and all of Europe except Russia, you would still have more than 300,000 square miles of Siberian territory to spare; or, in other words, you would still leave unoccupied in Siberia an area half as large again as the Empire of Germany.

True, as we shall see, not all this territory is equally valuable and well adapted for cultivation, or even habitation, but what there is left is still sufficient to inspire respect of any statistician who loves to dwell on magnitudes of things.

According to Mr. Yadrinzeff, a Russian authority on the subject, more than one-fifth of the land can lend itself to cultivation, but even accepting the very conservative figures of Dr. Ballod, who estimates the area fit for cultivation at but one-tenth of the total area, we still get nearly 500,000 square miles, which is a little more than one-half the land in farms in the United States, and is approximately equal to the total area under actual cultivation in the United States in the census year 1889; moreover, it is twice the area of the land devoted to the cultivation of cereals in this country during the same year. This should be sufficient to justify one in disagreeing with Dr. Ballod, who thinks Siberia is in no way to become a formidable rival of the United States in the agricultural markets of the world. Of course, if we measure the importance of Siberia in this respect by its present output of cereals, it does not seem to be a formidable rival. The total cereal crop of Siberia in 1894 was about 135,000,000 bushels, which is but slightly more than one-thirtieth of that of the United States in 1889. Still, western Siberia managed to export from 10,000,000 to 12,000,000 poods of grain (a pood equals 36.08 pounds avoirdupois). This is easily understood when one considers the insignificant number representing the population of Siberia, namely, 6,000,000 in round numbers, of which almost one-half represents seminomadic tribes, still at the low stage of barbarism.

But it is only when we turn from the actual to the potential that we can perceive the importance of Siberia in all its bearings. The second condition, which we mentioned above as the prerequisite for success in colonizing a country, is the presence of an immigrating element fit for the conditions that it is to face in settling it. That Russia has in great abundance, and in a way has the advantage over the United States, for the immigrants that are pouring in hundreds of thousands into the vast plains of Siberia are not foreigners, likely to become an element of social friction in the process of assimilation and adaptation, but native-born Russian peasants, used to the hardships of peasant life in the unequal struggle with the new conditions of life which have been staring them grimly in the face at home ever since the days of emancipation.

The immigration to Siberia, which consisted almost exclusively of exiles and Cossacks until the latter half of this century, and had not exceeded the figure of 20,000 per year during the eighties, received a sudden impulse during the present decade and rose from 60,000 in 1892 to 100,000 in 1895, reaching, according to Dr. Ballod, 145,000 during the few months of 1896 ending in June.

This is not a place to dwell upon the causes which prompt the migration of so large numbers of people who are proverbially known for their passionate attachment to the homes of their birth and the burial places of their fathers. We can hardly agree with Mr. Leroy-Beaulieu, who ascribes it, in his letters from Siberia, to the comparatively rapid growth of the rural population in European Russia as compared with the progress it is making in its primitive methods of cultivation. Were this the case, we should expect to see in Russia a uniform system of very small land proprietorship, similar somewhat to what we see in Belgium and France. But in reality we see a dual process going on in Russia; on the one hand a steady diminution of land possessions both in the sum total and in the average size of holdings of the bulk of the peasants, and on the other a concentration of these possessions in the hands of a small class of rich peasants, the new élite rising from the ranks of the peasantry itself. It is this concentration of land in the hands of the few, due to causes of which the discussion lies beyond the limits of this article, that has brought about a class of propertyless peasants during the last two decades and

is furnishing an abundant and practically inexhaustible colonizing material for the newly opening territories of Siberia.

With the Government anxious to have the vast realm settled, and the prospective settlers helpless and poor, it was but natural for the former to take the initiative in its own hands and organize the immigration on a large scale. Accordingly, the peasants starting for Siberia are informed beforehand by the Government agents as to the land they are going to receive, and the location it is situated in. On arriving at the place of destination they are allotted 15 dessiatines (40 acres) of land for each adult male, besides the right of grazing the cattle on the common pastures, and obtaining wood for fuel from the common forests. In addition to that, the peasants receive monetary loans from the Government on long terms, at the discretion of the local authorities. All that leads to the ever-growing influx of immigrants, which has to be checked by the Government, partly because of lack of facilities for the great numbers, partly for reasons more sordid—I have in mind the complaints of the landlords in European Russia, who protest against the permission to emigrate given by the Government to the peasants, since it leads to a scarcity of agricultural laborers and a consequent rise in their wages. No peasant is allowed to leave his home, let alone emigrate to Siberia, without permission of the authorities.

That this vast mass of peasants settling by the hundreds of thousands on the virgin soil of Siberia is bound to considerably raise its yearly output of agricultural products needs no argument. The only drawback on their part lies in the fact that they as yet follow the system of extensive cultivation; but that it is only a question of a few years when they will have to abandon it for better ways the history of farming in our West, and especially the experience of the “bonanza” farms, best attests. And the subsequent increase of population will still further tend to improve the methods of cultivation.

THE MINERAL RESOURCES OF SIBERIA.

Siberia's mineral wealth is also a matter of great importance. The well-known French economist, M. Leroy-Beaulieu, in concluding his letters from Siberia a few months ago, expressed the opinion that Siberia is not ripe for developing manufactures, but needs only foreign capital and foreign skill to bring out the enormous mineral wealth that lies hidden in its bowels. And here he struck the keynote of the situation. Let us try to get a glimpse of Siberia as she appears to the eye of the geographer and mineralogist, before we draw our own conclusions.

According to Russian geographies, Siberia may be divided into three principal zones:

- (1) The agricultural zone.
- (2) The forest zone.
- (3) Polar, or northern, zone.

The following brief table, taken from the Statistical Almanac “The Whole Russia,” for 1895, gives an idea of their relative importance:

ZONE.	Area.	Per cent.	Population.
	<i>Square miles.</i>		
Agricultural.....	1,366,151	25	5,500,000
Forest.....	2,326,539	43	845,000
Polar.....	1,728,896	32	75,000

What makes a particularly cold country less adapted for agriculture than regions of European Russia situated at a corresponding latitude is the conformation of its surface. A vast, endless plain, with the highest mountains in the world situated at its southern borders, and thus effectually cutting her off from the influence of the milder climate of the south, she lies open to the northern winds and the Arctic Ocean. The figures given above for the area of the agricultural zone (which is more than twice that given by Dr. Ballod) are based on the assumption that the lowest average yearly temperature compatible with agriculture is slightly above 57° F. If we were to draw a line on a map denoting the limits of that zone, we would get a sloping line beginning at the extreme western end of Siberia, at about 60° north latitude, sloping southward on its way to the east, cutting through Lake Baikal in its northern part, and coinciding with the parallel 50° north latitude at the extreme east. This zone in its western part may be subdivided into two parts—the southern, which is hilly, and the northern, consisting of steppes. The former, protected from the north by a chain of high mountains, has a mild climate, in fact one of the finest in the Russian Empire, allowing not only of the growing of cereals and vegetables, but even of that of fruits, grapes not excepted.

The northern level country is very arid, and in consequence suffers from extremes of heat and cold; still its colds are not as severe as in the rest of Siberia. Besides raising all sorts of cereals from wheat to oats, it has many other resources for the population to fall back upon. Its fisheries alone might furnish employment to many more thousands of people than they do now, but for lack of capital. The rarest and choicest of fish, such as make

up the delicacies of the most exacting gastronome, are caught here in abundance, and the export trade, which has now become so easy, owing to the Trans-Caspian Railway, and which amounts to thousands of poods at present, needs yet to be properly organized. The white steppes of the Semipalatinsk territory, a region only slightly less in area than France, overflow with an abundance of cattle, grazing being the chief occupation of the nomadic tribes wandering here, and offer exceptional opportunities for soap and leather manufacture, which is just now in its infancy; and though the forest zone justly lays claim to the fame of being the richest part of Siberia it is by no means the only one that can boast of great mineral wealth. Rich deposits of gold, silver, and minerals are found in the various parts of Siberia which make up the agricultural zone. In the territory of Semipalatinsk alone there are about thirty gold mines, besides rich deposits of silver and lead, coal and graphite, all of which are now being extracted and give good profits in spite of the primitive means employed in the work.

The same may be said of the province of Amoor, where gold mining is assuming the leading place in the industries of that region, both by the value of its output and the number of workmen employed. The following table shows the growth of the output of gold in that region:

PERIOD.	Gravel washed.	Gold obtained.
	<i>Poods.</i>	<i>Poods.</i>
1868-1874.....	155,893,554	958
1875-1879.....	270,012,404	920
1880-1884.....	373,821,364	1,327
1885-1889.....	369,749,050	1,922
1890.....	107,997,460	486
1891.....		427

Gold is obtained here almost exclusively by the process of placer mining, while the extraction of gold from mineral ore has hardly been begun. The good profits the Amoor fields are yielding, are still more surprising when to the primitive methods of working are added comparatively high wages—from five to six hundred rubles per year besides board. (The value of the ruble is equal to 51½ cents; but its purchasing power in Russia is nearly equal to that of a dollar in the United States.) Still the chief occupation in that province is agriculture; spring corn, wheat, oats, barley, and buckwheat are raised; the local product is, however, insufficient for the needs of the population, and grain has to be imported to a considerable extent.

The mountainous part of the government of Tomsk is one of the richest in the empire in mineral wealth. Mining was started here as early as 1726, by the famous Prince Demidoff. The best-paying mines are those extracting gold, silver and lead, and iron, the latter especially in the Alatau and Salair mountains. The Altai Mountains are rich in quarries of stone. In the district of Biysk more than five hundred different kinds of colored stone are obtained, besides a great variety of building material, such as granite, porphyry, sandstone, limestone, and also salt. In the district lying within less than 75 miles from Tomsk an immense coal field has been lately discovered, which, it is asserted, will furnish a product exceeding in quality the best English kind. There are even two springs of hot mineral water in that neighborhood. Apiculture furnishes occupation to fifteen thousand men. Fishing also occupies a prominent place.

The forest zone, which contains such a small fraction of the population of Siberia, is in reality the richest and most important part; in fact, the one that is destined to prove the point of attraction for foreign and home capital, and therefore to play that commanding part in the economic and political life of the young country which the East has been playing in the United States. Being situated to the north of the agricultural zone, it is marked for its more severe climate. Its northern limits begin where the soil is continually in a frozen state. Thus in the town of Berezoff, situated in this zone, only the upper layer of the soil is not frozen during the brief summers, but at a depth of 2½ feet the ground is constantly in a frozen state. This is, however, true only of its northern part; as it approaches the south conditions change for the better. Though the smaller in population, it is greater than the agricultural zone in extent. Its mineral wealth is inexhaustible. Mining has been carried on here for the last two centuries. The metals extracted are chiefly gold, silver, mercury, tin, lead, copper, and iron; turf, hard coal, graphite, sulphur, and naphtha are also mined, besides two kinds of salt, the ordinary table salt and the medical Glauber's salt.

As we shall see when reviewing the resources of some of the provinces in that region, rich finds of precious stones are not infrequent. This is perfectly natural when we recall the fact that Siberia was once a tropical country, covered with the richest of primeval forests, a country with a nature in no way second to that of Brazil. Finds of skeletons of mastodons and other primitive animals naturally suggest the probable presence of rich coal-fields as well as of precious stones, both of which are now in great evidence. The exploitation of diamond fields may in time become here as important an industry as in Brazil or South Africa.

Passing now to some of the provinces in that zone, we may mention the Transbaikal province, with an area exceeding that of France. Here, besides gold, silver, lead, iron, tin, and copper mines, are also found and obtained mercury and the following precious stones: Amethyst, jasper, carnelian, agate, opals, topaz, etc. Besides that the province is rich in mineral waters, boiling mineral springs being met with in several places. The flora and fauna are very rich and of great variety. In the part of Amoor province belonging to the forest zone silver and lead, copper, and iron are in abundance. In the tributaries of the Selimja River pearl has been discovered in quantities sufficient to promise a new valuable industry. Here as in the other provinces are to be found ferruginous springs. The flora is luxuriant and differs from that of Continental Asia. The forests are in many parts impassable, presenting a solid phalanx of century-old cedars and pines 100 feet high, swarming with animals of the most widely different kinds, from deer to tiger.

The island of Sakhalin is known for the rich coal fields which are worked at present only under contracts for the government, which uses the coal for its fleet on the Pacific. With the development of commerce this large island will, no doubt, become an important factor in the Orient. The same is true of the peninsula of Kamchatka, which, though situated far to the north, is rich in virgin sulphur, virgin copper, magnetic ore, coal, amber, and mica.

And, finally, that dreadful Yakutsk province, which has so much to offset the great disadvantages of its severe colds. That province, twice the size of the countries of France, Austria-Hungary, and Germany combined, equal to eight-tenths the area of European Russia, with a density of population amounting to one person for each 6 $\frac{1}{2}$ square miles, has no lack of mineral wealth. The Stanovoi Mountains, stretching along its eastern boundary, from the south to the north, contain rich ores of silver and lead. Iron and coal are found throughout the province. But the only industry developed here is that of placer mining, especially along the Lena River, which is rich in gold fields.

THE FOREST AREA AND ITS IMPORTANCE.

Aside from the mining industry, however, the forest region will play a very important part, owing to the vast, practically inexhaustible, forests, which will for a long time to come furnish both fuel and building material to Siberian industry. At present their chief use lies in furnishing an abundance of wild animals, constituting the chief source of the fur trade. The panther, lynx, wolf, fox, sable, ermine, glutton, badger, and bear—all these are hunted for by the nomadic tribes inhabiting this zone, furnishing their chief occupation.

The Primorskaya (literally meaning the seacoast) province is so advantageously adopted for fishing that, according to competent men, it is only lack of capital that prevents a great export trade of fish from here. When it is considered that a third of all the imports into eastern Siberia consists of foreign goods, mostly articles of manufacture (such as metallic goods, dry goods, besides butter and cattle), which are exempt here from custom duties, and that the imports are growing from year to year, one need not be very optimistic to venture to predict that an American line of steamers started here would in a few years from now build up a lucrative traffic between the two continents, besides the islands of Japan, situated hard by.

THE SIBERIAN RIVERS AND THEIR COMMERCIAL POSSIBILITIES.

To what an extent the Russian Government is anxious to see enterprises started, which would be conducive to the development of trade, one may see from the experience of the English company, which has been making an attempt to establish direct communication by sea between England and central Siberia. The history of these efforts, described recently by M. Leroy-Beaulieu, is so interesting as to be worth repeating here in brief. The rivers Obi and Yenisei, flowing through the western and central parts of Siberia respectively, enter, within a short distance from one another, the Arctic Ocean, which is frozen through the greater part of the year. During the few summer months, when the harbors into which these rivers flow are free from their wonted coat of mail, there still remain the great icebergs floating all along the coast in the ocean, making navigation an extremely dangerous venture. In spite of these difficulties several attempts have been made both by the Russians and English to discover some possible route for regular navigation for the following reasons: Both of these rivers flow through the most inhabited and richest part of the country through a length of thousands of miles, mostly navigable.

Like the rest of the great rivers of Siberia (with the exception of the Amoor River), they flow northward, starting from the extreme southern end of the country; their tributaries extend both east and west, thus making it possible to cover a very great territory if only the entrance to the mouths of these rivers in the north lay open to navigation. To add to these allurements, the distance from the mouths of the Obi and Yenisei to the ice-free coast of Norway is but 1,000 to 1,200 miles. A line of direct communication by sea with England, especially at a time when the Siberian Railway had not been even considered seriously, furnishing the cheapest and shortest route for conveying the bulky traffic of Siberian products in exchange for English goods, was too good a prize not to call for the enterprise of English capital and maritime valor. Repeated attempts failed, until in 1874 when Captain Wiggins, on board the *Diana*, successfully ran his course far up the river; he kept up his yearly visits until 1878,

when for some reason the enterprise came to an end. A partial success was reached in 1887, and the matter remained in abeyance until 1896, when the English Company, formed for the purpose a few years previous, sent a few steamers which discharged their cargoes at Turukhansk, about 500 miles inland from the mouth of Yenisei, whence the goods were sent southward on barges to Krasnoyarsk, an important center in Siberia. The interesting feature in connection with this is that the Russian Government, in appreciation of the efforts and the risks incurred by the English Company, allowed it to dispose of its goods free of duty.

The commercial importance of the Siberian rivers is increasing from year to year in spite, or, perhaps, thanks to the opening of the great railway. Before the opening of the Ural railway the combined freight shipped along the Toora and Tobolsk rivers did not exceed 45,100 tons; in 1894 (after the opening of that railway) it reached 360,800 tons—i. e., increased eight times. A regular line of river communication along the system Obi-Irtysh with their tributaries is kept up throughout a length of nearly 10,000 miles, reaching the extreme eastern rivers of European Russia.

Finally comes the third and last, the Polar or "Tundra" Zone, an immense frozen, marshy, field, covered with moss. It lies to the north of the Forest Zone and extends to the Arctic Ocean. It is inhabited exclusively by the half-wild nomadic tribes, following their deer through the endless expanse of their grim land, varying this by occasional hunting and fishing. A white man is met with here only when traveling. That part of the country will hardly ever be of any account in the economic life of Siberia.

One more important item to be mentioned in connection with the actual conditions of the country is the cheapness of labor. With the exception of the gold fields in the Amoor Province mentioned above, labor in other parts of Siberia is very cheap, owing to the low standard of life of the Russian peasant. In the Semipalatinsk Province the workmen engaged in the gold mines are paid on the average at the rate of 30 rubles and board for the whole period of six months, constituting the season during which mining operations are carried on there. In general the miners and iron-mill workers are the most poorly paid of all the poorly rewarded Russian workmen.

BUSINESS OPPORTUNITIES DISCUSSED.

The reader who has been patiently laboring through this description of the country and its marvelous wealth may finally ask: "Why, if that is the case, do not the Russian capitalists rush into Siberia rather than leave its vast resources lying idle or waiting for the foreign capitalists to pick them up?" That question will sound perfectly natural to every one not familiar with the conditions of Russian industry. In no western country, at least at present, are such large returns obtained, as a rule, upon investments of industrial and commercial capital as in Russia. Profits of 20 per cent are hardly considered worth troubling about. As an example, we may quote here the official returns of the profits made in the textile industry—the most important one in Russia. The Yaroslav cotton factory has yielded to its owners an average yearly profit during 1891–1893 equal to 34.6 per cent on its capital stock and 65.5 per cent in 1895. The Ismail factory gave 45 per cent during the same year, the Russian Cotton Spinning Company 30 per cent, the Neva 60.5 per cent, Tver 40 per cent, the Baranoff Company 39 per cent, Krenholm 31 per cent, Zindel Company 46 per cent; Morozoff & Sons, the largest in Russia in their line, declared a 52 per cent yearly dividend during each of the three years previous to 1895 and 65 per cent during the latter year. Finally, the Sobin factory gave the, one might say, incredible figure, were it not for the official sources, of 144 per cent profit in 1895. The Kievlianin, a leading daily in southern Russia, commenting upon the fact that stock companies in all branches of industry declaring dividends from 40 per cent to 100 per cent and over are counted in Russia by dozens, remarks: "Can we speak after that of the influx of foreign capital in our country? No; if the foreigners were better acquainted with the conditions of our industry that influx would assume incomparably greater dimensions."

Whatever may be said of the influx of foreign capital, which is far from being insignificant in European Russia, one thing is evident—that is, that the openings for highly profitable investment are so great in European Russia as to push the question of the opening up of new fields in Siberia far down to the bottom on the calendar of the proceedings of Russian capital. The perusal of the volumes of reports of the British consuls in Asiatic countries, such as Persia, for example, will show that the Russian manufacturers have no difficulty in forcing the English goods out of the market whenever they want to; and if we do not see as yet as intensive a striving after the foreign market on their part as on that of the French or German business men, it is only because the field at home is far too rich and unoccupied as yet to justify any extra exertions for additional and less paying markets where competition of foreign goods reigns supreme. Not before Russian capital subjugates the great fields of home production, driving out of the field the still prevalent house industry, not before the accumulation of capital, which is now going on at a neck-breaking rate, overruns its channels, as had been the case in England decades ago, not before that time can Russian capital, in the nature of things, be expected to turn its attention to the riches of Siberia. And in the meanwhile that country remains open to receive the seeds of industry from any other source that may come forth.

Speaking of a country as offering an outlet for foreign capital, we must keep in mind that this may take place in two ways. English capital, for example, saw only one way of investment in this country during the colonial period—that was furnishing it with its products manufactured in Great Britain. Now, however, when the United States have developed an industry of their own, English capital finds it often more to its advantage to invest itself in the productive process in this country rather than to try supplying it with manufactured articles. With the development of the modern system with its great facilities, not only for transportation of goods, but also for the transportation of capital, due to the uniformity of methods of trade and production the world over, the latter method is ever gaining in prominence. And it is mainly in this direction that the beginning in Siberia will have to be made. Commerce and interchange of goods will as naturally follow the industrial development of that country as the water in the stream follows its prearranged course; but it will have to follow, and not come first.

AMERICAN INTEREST IN RUSSIAN DEVELOPMENTS.

To American capital it is not an entirely new field, for American iron mills and other establishments counting their capital in millions of dollars are now in existence in Russia. But the influence which the opening up of Siberia is likely to exert on America itself is far greater than that which might be exerted by the former on any other country outside of Asia. The great West, which has so far been preserving largely an agricultural and mining character, may yet develop industries of its own owing to the new trade with Siberia and partly also with Japan. And this will be true notwithstanding the character of the first investments in Siberia pointed out above. The development of mining, for instance, in Siberia will at once create a great demand for mining machinery; the same is true of the railways of which the enormous rolling stock hauled through its magnificent distances will have to be constantly renewed; the same is true of the many other industries devoted to turning out crude products. From personal conversation with responsible persons, such as Government officials visiting this country with the object of studying American machinery, the writer of this knows there is a decided preference given in Russia, and especially in Siberia, to American machinery as over against the German; but owing to the better acquaintance of the latter with the business methods and needs of Russian trade, their willingness to extend credit where the Americans do not, etc., they have been quite effectually keeping out American goods from European Russia.

The Siberian manufacturers who have, so far, been entirely dependent on the Russian middlemen had to submit, though reluctantly, to the inevitable. But with the completion of the Siberian railway the tables will be turned, so to say, and this is one of the chief reasons why the Siberian people are looking with such eagerness toward that end. With the extremely low railway rates for freight (about 4 mills per ton mile), the Siberian manufacturer knows he will be able to procure the better American product at a cheaper rate than the poor German goods. The Government itself follows the same principle. The United States consular report for July, 1898, mentions a large order for American locomotives and air brakes placed by the Russian Government for the Manchurian railway; such and similar orders placed with various American firms have already led to the opening of new manufacturing establishments in the West, especially California, and, with the opening of Siberia in real earnest, will no doubt stimulate the West to new forms of activity. The Reports on Commercial Relations of the United States for 1895-96 contain the following statement:

German manufacturers are injuring American trade [in Russia] to a great extent, especially in the line of machinery. The Germans are now supplying Russians with machinery which was formerly imported from the United States. They imitate American patents, and on account of cheaper labor and cheaper transportation, can afford to sell for less than American manufacturers.

After what has been said above no comments to that statement are necessary.

With idle capital eagerly seeking a place for investment in the leading industrial countries; with the boundless wealth waiting in the widely outstretched arms of Siberia to be taken by the first comer, with the Occident and Orient preparing to meet in brotherly or deadly embrace in the "Old Cradle of Man;" with the great untouched resources of that enormous continent only beginning to come within the horizon of the hungry eye of civilized man, and with the great Siberian railway tolling, like a death bell, the good old sleepy past, the clouds that hitherto tried to conceal from us the picture of the coming century are quickly breaking away, showing us the direction in which triumphant civilization is taking the next step on the march to its final goal.

THE RUSSIAN-ENGLISH AGREEMENT REGARDING RAILWAY INTERESTS IN CHINA.

The following is a copy of the agreement signed April 28, 1899, by representatives of the Russian and English Governments, regarding their respective railway interests in China. It is officially published by the British Government, under the title of Treaty Series, No. 11, 1899, Exchange of Notes between the United Kingdom and Russia with regard to their respective railway interests in China :

Russia and Great Britain, animated by the sincere desire to avoid in China all cause of conflict on questions where their interests meet, and taking into consideration the economic and geographical gravitation of certain parts of that Empire, have agreed as follows:

1. Russia engages not to seek for her own account, or on behalf of Russian subjects or of others, any railway concessions in the basin of the Yang-tsze, and not to obstruct, directly or indirectly, applications for railway concessions in that region supported by the British Government.

2. Great Britain, on her part, engages not to seek for her own account, and on behalf of British subjects or of others, any railway concessions to the north of the Great Wall of China, and not to obstruct, directly or indirectly, applications for railway concessions in that region supported by the Russian Government.

The two contracting parties, having nowise in view to infringe in any way the sovereign rights of China or of existing treaties, will not fail to communicate to the Chinese Government the present arrangement, which, by averting all cause of complication between them, is of a nature to consolidate peace in the far East, and to serve the primordial interests of China herself.

SECOND NOTE.

In order to complete the notes exchanged this day respecting the partition of spheres for concessions for the construction and working of railways in China, it has been agreed to record in the present additional note the arrangement arrived at with regard to the line Shanghai-Kuan-Newchwang, for the construction of which a loan has been already contracted by the Chinese Government with the Shanghai-Hongkong Bank, acting on behalf of the British and Chinese corporation.

The general arrangement established by the above-mentioned notes is not to infringe in any way the rights acquired under the said loan contract, and the Chinese Government may appoint both an English engineer and a European accountant to supervise the construction of the line in question, and the expenditure of the money appropriated to it.

But it remains understood that this fact can not be taken as constituting a right of property or foreign control, and that the line in question is to remain a Chinese line under the control of the Chinese Government, and can not be mortgaged or alienated to a non-Chinese Company.

As regards the branch line from Siaoheichan to Sinminting, in addition to the aforesaid restrictions, it has been agreed that it is to be constructed by China herself, which may permit European—not necessarily British—engineers to periodically inspect it, and to verify and certify that the work is being properly executed.

The present special agreement is naturally not to interfere in any way with the right of the Russian Government to support, if it thinks fit, applications of Russian subjects or establishments for concessions for railways, which, starting from the main Manchurian line in a southwesterly direction, would traverse the region in which the Chinese line terminating at Sinminting and Newchwang is to be constructed.

The above agreements are signed by the Russian Minister of Foreign Affairs and the British Ambassador at St. Petersburg.

RUSSIA'S INDUSTRIAL DEVELOPMENT.

[United States Consul Monaghan in Consular Reports, 1897.]

Although Russia's record in recent years in industrial development is enough to encourage her most progressive statesmen, she must stay a long time in foreign markets buying machinery to help her make the most possible out of her huge natural resources. She must buy. She will buy, however, only where she knows or believes she will be best served. For years German intelligence has taught the Teutons how to beat others in Russia's markets. To German energy and German technical skill is due the fact that this Empire has furnished Russia three-fourths of her best industry-developing forces. This, in turn, has given Germans a not undeserved influence. At this year's Nijni-Novgorod fair it was German-trained and German-supervised industries that won the highest prizes. This was especially true of the machine-building branches, in which a great majority of the master mechanics and engineers are Germans. The same may be said of the mining experts. In the silk mills the French examples rule; in cotton, the English. High tariffs on imports have helped to build up the home industries. This is especially true in the cheaper grades of goods. Goods of higher grades must be bought for a long time in foreign parts. England complains of her constant losses and Germany's gains in Russia's markets. England's losses are due to the indifference of her agents in learning the Russian language. Not an English traveler or agent understands or speaks Russian, while not a German agent lacks the language, and, what is equally important, a knowledge of the nation's industrial needs. These he studies as diligently as he does the

language. Another great advantage the Germans have over all other competitors, even the French, is the knowledge the Russian merchants have of German.

Not only has Russia's industrial development been remarkable, but her natural-wealth resources have been extensively opened up. Here, too, Germans have had their hands in up to the wrists. The coal production has gone up threefold in fifteen years. Baku's petroleum export has increased year after year till to-day it is a question whether Germany can not get her total supply from the Baku wells, thus shutting out American oil. New wells have been opened recently near Vladicaucus and are yielding profitable returns.

Beyond the Caucasian provinces cotton is being successfully grown in large quantities. Even tea, that tantalizing product, believed hitherto impossible outside of China and India, is being successfully cultivated. California grapevines on trans-Caucasian hills are yielding fruit for wine and raisins. Anything more active than the iron industries in the Russian Empire does not exist. This is especially true of iron and steel pertaining to railroads, due to the remarkable development of new lines going on all over the country. Farmers alone suffer. Ignorance and lack of funds force them to the wall when they enter the world's markets against men trained scientifically in agricultural and horticultural schools, and whose position among older and richer countries puts ready, cheap money within easy reach at reasonable rates.

PROGRESS OF MANUFACTURING INDUSTRIES IN RUSSIA.

The rapid development of manufacturing in Russia is interestingly told by United States Consul Monaghan, of Chemnitz, in a communication to the Department of State, in which he says:

In 1790 Russia saw its first steam engine built. The imperial foundries that mold for the Empire's marine, even to-day, owe their origin to the enterprise and genius of Gascoigne. The first large private machine-building concern in the Empire (erected by Bird) is now in the hands of a Franco-Russian syndicate, which builds engines and boilers for steamships. Wilson, Gascoigne's successor, also a Scotchman, introduced, in 1802, the manufacture of agricultural machinery. The years 1815, 1818, and 1824 saw several large concerns added; but nothing like the progress made in other countries was recorded in Russia. In 1825 the first stone was laid for what was afterwards to prove especially interesting to Americans. I refer to the Alexander Foundry and Machine Factory. Intended originally for tool making, it was converted into a shop for locomotives, cars, etc. In 1844 it was placed under control of an American company, which put new life, not only into its workings, but into the whole Empire. To-day this establishment is under State control. In 1850 the Government controlled nearly all the large concerns. Only twenty-five in the whole Empire were in the hands of private parties, and these turned out machines valued at 423,300 rubles, while the machines imported were entered as worth 2,315,000 rubles. After the war in the Crimea, under the enlightened patronage of Alexander II, new life was infused into machine building. Directly after the war the privilege to bring in machinery by sea, hitherto prohibited, was granted. It was certainly an indirect, if not a direct, consequence of the war.

The rapid development of railroad systems brought with it great changes, if not reforms. In 1859 the high tariffs on machinery imported by sea were removed, to the lasting damage of the home industries. In 1860 the number of private concerns had gone up to 92, the value of the product to 846,215 rubles, while the number of persons employed went up to 1,862 from 1,475. This shows, as hardly anything else could, the development of the Empire.

The ten years beginning with 1860 were profitable to those interested in the iron industries, both as merchants and manufacturers. They were allowed to import cast steel and iron for ship engines and machines, also for river steamers, free of duty. In 1869 an imperial edict permitted textile, paper-making, book-making, and agricultural machinery to come in free of duty. In 1861 the serfs were freed. This was a great boon to the builders of machinery. From 1865 to 1870 the development was so rapid that the product surpassed by many millions all of the preceding years. In 1870 there were 145 factories and 27,117 hands, turning out wares worth 23,391,755 rubles. The imports (machines, etc.) amounted to 37,576,654 rubles.

The decade 1870-1880 was progressive also. In 1877 the Empire made money by compelling importers to pay duties, not in credit rubles, but in gold or on the gold basis. This was equivalent to an increase in duties, but lacked the objectionable features inseparable from every effort, however honest, to satisfy all sections of a large country with diversified interests, when protective tariffs are to be adjusted. This was a time, too, in which high tariffs, backed by efforts in favor of technical schools, prevailed. Factories sprang up all over the Empire. In 1880 there were 237 factories, and 56,165 hands, producing machines worth 72,289,200 rubles, surpassing for the first time in the Empire's history the amount imported (67,345,477 rubles). The dangers of overspeculation brought evils against which the Empire was at first unable to make headway. Instead of beginning on a small scale, with modest factories, building as the demand grew, the manufacturers constructed huge concerns, fitted up extravagant offices, appointed numberless high-salaried officials, and—failed. The best and most complicated machinery was bought in England, France, and other countries and given to rough-fingered Russians, not to run, but to spoil. The auctioneer's hammer was heard on all sides. Factories that had cost fabulous sums of money were sold for a mere song.

Industrial economy now took the place of extravagance; protective tariffs were increased and extended to articles hitherto untaxed; imported textile and book and paper making machinery was taxed. Agricultural machines still stayed on the free list, in order to facilitate progress from primitive methods. The result was that factories gave attention to the highly protected industries. This was also partly due to the fact that cast steel and iron, much of which was used in the manufacture of agricultural implements, had again been placed under protective tariffs. Since 1885 agricultural implements have paid duties, at first 50 copecks in gold per pood, and now 70 copecks. Even this is not enough.

The following table shows the progress made in recent years:

IN—	Factories.	Hands.	Value of production.
1885.			Rubles.
European Russia	266	37,928	34,978,000
Poland	70	4,854	6,372,000
Total	336	42,772	41,350,000
1887.			
European Russia	302	40,701	41,793,000
Poland	68	5,405	7,616,000
The Caucasus	10	410	312,000
Siberia	2	302	222,000
Total	382	46,818	49,943,000
1889.			
European Russia	331	44,360	46,882,000
Poland	60	4,908	7,784,000
The Caucasus	10	831	1,076,000
Siberia	4	319	416,000
Total	405	50,418	56,158,000
1890.			
European Russia	338	43,328	42,669,000
Poland	57	4,241	5,907,000

Siberia	4	300	204,000
Total	412	49,082	49,911,000

To give a general idea of the growth of the machine-making industries in all parts of the Empire, I submit the following table. I may say here, to avoid error, that the figures given above apply also to machine building. In the following table 1850 is taken as a basis for comparison. The actual numbers in 1850 were: Mills, 25; hands, 1,475; product, 423,390 rubles; imports, 2,315,000 rubles. To one factory, one workman, 1 ruble of production, and 1 ruble of imports in 1850, the other years have the numbers or ratios given in the table.

DESCRIPTION.	1860	1870	1880	1882	1883	1884	1885	1886	1887	1889	1890
1 mill	3.96	5.8	9.45	9.36	9.52	10.44	10.64	11.12	12.08	13.25	13.52
1 hand	7.19	18.31	31.26	30.37	29.95	28	25.71	28.46	27.59	30.07	29.37
1 ruble of production	18.78	64.7	170.4	109.9	100.96	92.47	82.61	92.76	98.71	100.71	100.78
1 ruble of import	3.68	16.2	29.1	9.03	8.52	9.78	6.21	6.28	9.47	9.7	8.88

At present, in many branches of machine making, Russia is independent of the outside world. The kinds of machines she must still import—a matter that should interest us as much as Germany or England—are agricultural, textile, paper-making, and printing machines and presses. Our makes of all these machines are not only better than those of England or Germany, but they are most admirably suited to Russian agricultural conditions, because agriculture in Russian is conducted on the same extensive scale as in the United States. Many gas engines are being imported. The Empire builds now all the other kinds of machinery needed. Its locomotives look well, but are never so well built as ours. They work neither as long nor as well; after running a short time, they need all kinds of repair. An important fact is Russia's friendship for the United States; this may mean a great deal to her as well as to us in the coming years, during which Russia is to win that place among industrial states that a bountiful Providence has destined her to fill. If the progress of the past has been slow, that of the future is to be fast. The preparations now being made justify this assertion. Besides carefully prepared treaties of commerce, industrial, industrial art, and technical schools are being erected all over the Empire. Most important among the many factors in the growth of the Empire are the new railroads and waterways that are being built. Great efforts will be made to bring the East and West closer together. Siberia is to be plowed, harrowed, and cultivated as are to-day our Western prairies. To do this how many agricultural machines will be needed? Who is to supply them? We have several advantages—first, Russia's good will; second, our superior wares; third, the analogous agricultural conditions.

IRON INDUSTRY IN RUSSIA.

According to the statistics collected by the central office of the Russian iron manufacturers and reported to the State Department by Consul-General Karel, the iron works in Russia produced, in 1896, 98,414,000 poods (1,776,963 tons) of cast iron, 30,661,000 poods (553,615 tons) of iron, and 42,596,000 poods (768,113 tons) of steel. Of the above quantity of cast iron, 92,145,000 poods (1,663,770 tons) were produced by 187 private iron works, 4,404,000 poods (79,519 tons) by 21 Government iron works in European Russia, 1,271,000 poods (22,949 tons) in the iron works of Finland, and 594,000 poods (10,725 tons) in Siberia. This is an increase of 9,629,000 poods (173,861 tons) over 1895, in which year the output of cast iron amounted to 88,785,000 poods (1,603,102 tons).

The largest quantity of cast iron, namely, 38,995,000 poods (704,094 tons), was smelted by 8 iron works in the southern region, while the 91 private and 13 Government works in the Ural produced 35,457,000 poods (640,212 tons). Thus these two regions produced over 74,000,000 poods (1,336,144 tons), whereas the other regions together produced only about 22,000,000 poods (397,232 tons), namely: The northern, 357,000 poods (6,446 tons); the Moscow, 8,226,000 poods (148,529 tons); the southwestern, 174,000 poods (3,142 tons), and the Polish, 13,062,000 poods (235,847 tons).

The import from abroad of cast iron, iron, and steel into Russia during 1896 was: Cast iron, 4,592,000 poods (82,913 tons); iron and steel, unwrought, 23,009,000 poods (415,455 tons); iron and steel articles, 2,744,000 poods (49,546 tons), and machines and apparatus 5,269,000 poods (95,137 tons). The iron, steel, and manufactures of the same amounted to 31,022,000 poods (560,133 tons), which, if changed into cast iron (counting $1\frac{1}{2}$ poods of cast iron for every pood of iron), would give 46,533,000 poods (840,200 tons). This, together with the 4,592,000 poods (82,913 tons) of cast iron imported into Russia, will make a total of 51,125,000 poods (923,113 tons). From the foregoing it can be seen that, in order to satisfy the requirements of Russia's interior market, it required in 1896, 149,540,000 poods (2,700,094 tons) of cast iron, which, according to the population of 130,000,000, shows 1.1 poods (39.72 pounds) per head.

The quantity of cast iron smelted, the import from abroad, and the consumption in Russia during the last four years can be seen from the following:

DESCRIPTION.	1893.		1894.		1895.		1896.

Spain	12,604,000	227,578	0.7	0.92	332	1.6	57 $\frac{1}{2}$
Total	1,745,292,000	31,512,992					

The percentage relation of the duty to the price of cast iron in Russia in 1896 was: Price per pood (36.112 pounds) of cast iron in St. Petersburg—Cleveland, 85 $\frac{3}{4}$ copecks (44 cents); shots, 1.01 rubles (52 cents); duty per pood, 30 copecks (23 cents); percentage relation of the duty to the price—Cleveland, 111 per cent; shots, 80 per cent.

[From British Board of Trade Journal, June, 1898.]

According to a report of H. M. Consul at Taganrog (Foreign Office Annual Series, 2076), the iron industry in the south of Russia is assuming considerable dimensions. About ten years ago the southern part of the Empire, which has now become a mining district, was very little more than a desert, with the exception of localities in the immediate neighborhood of salt and coal mines, and the factories of Messrs. Hughes (the only British enterprise in the southeast of Russia at the time), and Pastoukhoff, where laborers started small settlements.

The towns of this district, such as Ekaterinoslav, Bakhmout, Lugansk, Mariupol, Taganrog, etc. (with the exception of the first named, which began to show signs of probable development of metallurgic enterprise, did not dream of their becoming manufacturing centers. Taganrog was considered only as an administrative town and a grain market, which, by the bye, began to fall off, and Mariupol had all its hopes on the deep port constructed there. The building of the Mariupol Railway in 1883, and that of Ekaterina in 1884, linked together, the former

the coal mines with the Sea of Azof, and the latter the ore beds of Krivoy Rog (which is partly in the province of Ekaterinoslav) with the coal mines. These railways have contributed greatly toward the population of the neighborhood, but the springing up of so many factories was caused by the protective duty imposed upon foreign cast iron (about £1 10s. in 1884 and £3 in 1891, per ton) on one side, and the discovery of iron ore on the other.

As an instance of the rapid increase of population, the town of Ekaterinoslav, which in 1887 had 40,000 inhabitants, counts now 120,000; another instance is the factory of Messrs. Hughes, which has developed into a town, Hughesoffka, of 20,000 inhabitants. The factories in Taganrog have attracted nearly 2,000 new inhabitants, mostly foreigners (Belgians).

All the above shows plainly that a great future is before this hitherto poorly populated part of Russia covered by extensive steppes.

During the year 1897 a vast amount of foreign capital (mostly Belgian and French) has been invested in numerous enterprises, mainly metallurgic.

Besides the two factories of ten years ago, mentioned before, there are now 12 new ones, with 25 blast furnaces with a yearly increasing production of cast iron. The surmise that the above factories would produce about 55,000,000 poods of cast iron in 1897 proved to be correct, as the statistics show that 62,500,000 poods—i. e., 1,000,000 tons—were put on the market during the said year.

It remains a wonder that British capitalists are not more alive to the state of affairs, and allow other nations to be first in this field of enterprise.

A few figures will show the results of the last ten years of protective tariff on the growth of the iron industry in southern Russia. The British vice-consul at Kertch states that in 1887 there were only three blast furnaces at work; in 1898 the number is being raised to 38. The production of cast iron for 1897 is given as 1,000,000 tons, nearly double the figure for 1886, and in 1898 it is expected to reach 1,500,000 tons. These statistics refer to the south alone, where the number of new works created during the period in question amounts to 57, besides 10 new coal mines and several iron mines, employing about 80,000 men. It would seem to be the beginning of a gigantic industrial movement which will gradually draw most of the energy of the country toward the Black Sea, not merely displacing but transforming the population, and promising consequences, domestic and international, of a most important nature.

PRODUCTION AND IMPORTS OF IRON AND STEEL IN RUSSIA.

According to figures given in the Russian *Viestnik Finansoff*, the total production of pig iron in the whole Empire in 1897 was 113,982,394 poods, and the production of manufactured iron and of steel was respectively 30,610,984 poods and 52,963,928 poods. (Pood = 36 pounds avoirdupois.)

As regards Finland and the mines of the Imperial Cabinet, the figures are a repetition of those for 1895, there being no later particulars. The total as given above is not much vitiated by this fact; firstly, because the production of Finland and the Imperial Cabinet mines varies hardly at all from year to year, and, secondly, because in any case it is but a small fraction of the total; thus 1,610,000 poods of pig iron, 730,619 poods of manufactured iron, and 393,960 poods of steel, represent the figures for 1895.

The following statement is given showing the total production, imports, and consumption of pig iron for the Russian Empire in each of the last four years:

	1894	1895	1896	1897
	<i>Poods.</i>	<i>Poods.</i>	<i>Poods.</i>	<i>Poods.</i>
Pig iron produced.....	80,144,000	88,785,000	98,414,000	113,982,000
Pig iron imported.....	47,511,000	47,496,000	51,126,000	52,247,000
Total consumption.....	127,655,000	136,281,000	149,540,000	166,229,000
Proportion of imports to consumption (per cent).....	38	34.8	34.2	31.4

RUSSIAN WOOL SUPPLY ABSORBED BY RUSSIAN FACTORIES.

Consul Heenan reports to the State Department that only the coarse carpet wools are shipped from Russia and the time is fast approaching when the export of these coarse wools will cease altogether. It is now many years since foreign buyers of the finer grades of wool have been able to compete with home purchasers. Formerly the quantity of fine wools annually shipped to Great Britain and the Continent amounted yearly to several million dollars. At present these shipments have altogether ceased. Russian manufacturing interests have increased so largely during the past ten years as to consume not only the entire home product in these fine wools, but a fair share from abroad as well. The demand for the coarse carpet wools by the home manufacturer has increased

steadily, and it is only a question of a very short time when they will disappear from the list of articles exported. Wool is the only Russian product grown in this consular district which is exported to the United States. Of late years quantities of goatskins have been shipped via Odessa to the United States, but these come from central Asia, and Odessa at present happens to be a favorable shipping point. With the stoppage of wool shipments from this consular district would disappear the entire Government revenue from invoices.

THE RUSSIAN TARIFF AND ITS EFFECTS.

The Russian minister of finance, M. Witte, in his report of 1897, commenting on the new tariff rates adopted from time to time since 1880, says:

From 1880 the Government began a systematic increase of custom-house duties, among which it is necessary to note the imposition and subsequent increase of the duty on iron and coal and the 10 per cent increase (in 1881) on all articles of import, and a second increase in 1885 of nearly 20 per cent on the majority of the articles in the tariff. In 1891, after a general increase of duties by 20 per cent in consequence of the very great rise in the course of exchange, which weakened the effect of protection by means of duties payable in gold, a new tariff was introduced, which protected almost every branch of our industry and in every stage of manufacture, from the cultivation or extraction of the raw material to its final manufacture into more or less expensive articles of trade. Among the measures favoring the development of our industries it is necessary to make special mention of the abolishing of the trans-Caucasian transit of goods in 1883 and the revision of the Russo-Finnish custom-house tariff in 1885.

All these measures, which have exerted such a favorable influence on the development of Russia's productive forces, were taken by three of my predecessors. For the last four years the increase of protection has been limited almost entirely to the increase of the duty on raw cotton and a corresponding rise in the duty on cotton yarn. On the other hand, the system of protection adopted by most of the European powers with regard to their agriculture, and expressed by imposing or increasing the duty on raw agricultural produce—our most important article of export—induced our Government to pass from a system of autonomic tariffs to one of conventions and concessions, on the basis of special mercantile treaties, in return for corresponding concessions to the import of our agricultural produce into those countries. But such lowering of our tariff, made in the interests of our agriculture, has not altered the protective character of our tariff policy with regard to manufactures. Thus, during a period of twenty years the Government has remained firm in its protection of national production, and the results obtained during this period by Russian industry fully justify such a policy. Of course, we have a long way to go before we can create a firm and widespread national industry, equally satisfactory to every branch of the national economy. And of course such a time will come all the sooner the more energetic are the efforts of the Government to influence the growth of national industrial life by every available means. But one comes across, and will continue to do so, declarations and even petitions for a departure from the protective system, or at any rate a more or less considerable relaxation of it.

Under a system of protection there is no doubt that at first, before the industry is fully developed and firm, the interests of the direct consumers often have to suffer. There is likewise no doubt that the prices of instruments of trade and manufacture rise under the influence of custom-house duties, and the raw material imported from abroad rises in price, too. On the other hand, there can scarcely be any doubt that the growth of national industry, the establishment of a steady home market for agriculture, and the protection of national labor can not be effected without infringing the interests of separate bodies of men, as the general law of organic development—the inevitableness of sacrifices for the attainment of great aims—is fully applicable to the economic growth of a country.

To the question, Which is preferable, an intensified development of manufacturing industry in a short period of time or a less vigorous and slower progress? there can indeed be several answers; but there can scarcely be any dispute that once government for a long period of time has kept to a strict and consistent system of protection any serious relaxation of protection would be a great political blunder and would jar the economic organism of the country. In the history of the material culture of every country the birth of manufacturing industry is rightly considered a very important turning point in the economic life of the nation. Exclusively agricultural countries are justly considered to be poorer than those in which national labor finds a variety of employment, thus creating new sources of wealth. But Russia, even at her present stage of industrial development, can no more be considered an exclusively agricultural country, as her manufacturing industries have already reached a considerable sum, and the further development of her material well-being is closely connected with the flourishing state of her manufacturing industries.

The price of the total annual agricultural produce of Russia does not exceed 1,500,000,000 rubles, while the annual produce of our mining and manufacturing industries exceeds 2,000,000,000 rubles. The growth of such an important branch of national productiveness could not but lead to a corresponding redistribution of the country's economic forces. Under the influence of the development of the manufacturing industries the conditions of economic life in the country have altered greatly. Capital has found another channel, labor has discovered other employments, credit and the monetary currency have taken peculiar forms, etc. Under such conditions the reorganization of a vast State into the type of an agricultural country would lead to a catastrophe. The very possibility of an abrupt transition in industrial policy is capable of relaxing the economic energy and arresting productive expenditure.

But such a revolution, even if it were possible, would not improve the position of Russian agriculture in the international market. Russia would be flooded with the productions of western industrial countries, at the cost of her own poverty she would aid in developing foreign manufactures, while our agricultural produce would still retain the same straitened position in the foreign market. At the present time an agricultural country is deprived of the possibility of an international interchange of produce on equal terms of import and export, as most European States, in adopting a system of protection with regard to agriculture, have protected it by exceedingly high duties. In such a state of affairs for an agricultural country to decline seriously protecting its manufacturing industries would be nothing else than giving full consent to a system of international exchange based on a manifest, open exploitation of its productive forces—i. e., a position incompatible with the dignity of a great nation.

With all this the policy of protection does not exclude the possibility, while carefully watching the development of national economy, of some lowering of particular paragraphs in our tariff in those cases when one branch or another is strong enough to

withstand foreign competition, and especially when foreign countries, in return for such a concession, agree to lower the duties on our agricultural exports.

Among the prominent events in the economic life of Russia during the past year it is necessary to mention the Russian industrial and art exhibition at Nijni-Novgorod, originated at the desire of the late Emperor Alexander III. Started with the intention of verifying the progress attained by Russia and of showing what problems in the industrial development of the country required solution, the exhibition of 1896 fulfilled every expectation and yielded abundant material for the study of the present conditions and requirements of the various branches of our national industry.

From the extensive labors of the committees of experts, in which several hundreds of scientists and practical specialists of various branches of industry took part, the Government obtained a plentiful supply of materials both for forming an opinion on the present condition of our industries and for working out measures for their further development.

The experts' verdicts showed that since the last exhibition of 1882 almost every branch of our industry has progressed greatly, both in quality and quantity. During this period, under the shelter of a long peace, many perfectly new branches of industry have sprung up and expanded, while those that already existed have developed and grown stronger. It is enough to speak of the vast progress in metallurgy, manufacture of machinery, coal mining, and the petroleum, chemical, and cotton industries, in the cultivation of cotton, in wine making, and in many other branches. Such cheering results are the consequences of the protective policy recently adopted by the Government. In the history of this system the measures taken in 1877, 1880-1885, and 1891 are specially to be noted. The payment of custom-house duties in gold, brought into force in 1877, increased the protection of all goods by 30 per cent, corresponding to the depreciation of the paper currency at that time.

REDUCTION OF DUTIES ON AGRICULTURAL MACHINERY IMPORTED INTO RUSSIA.

The Russian Government recently reduced the rates of duty on agricultural machinery, to continue in most cases until 1903. Consul-General Holloway is reported in the United States Consular Reports of 1898 as saying upon this subject:

During the years 1895-96 the ministry of finance and also the ministry of agriculture and crown domains received applications from several agricultural associations and private persons, interceding for an improvement in economical conditions of the agricultural industry, as the prices of farm products in the international market were rapidly falling. This, they claimed, could be facilitated by reduction of the price of agricultural machinery, implements, and manure. Owing to the present condition of agriculture and of the machine-building industry in Russia, the duty on foreign agricultural machinery, amounting to 35 cents per 36 pounds, is excessive and prevents the general use in Russia of the latest improved implements. The manufacture of agricultural machinery in this country has made considerable progress owing to the protective tariff, but is still unable to satisfy the requirements of the agricultural industry, as many machines and implements, especially complicated and patented apparatus, are not manufactured in Russia. In view of these facts, the farmers and agricultural associations have requested a material reduction or entire suspension of the duty on such machinery and manure.

Furthermore, in order to assist the home production of wine and enable it to resist the various diseases of the vine and other plants, the ministry of agriculture and crown domains has considered the question of importing, duty free, chemical products and apparatus to be used for this purpose.

In transmitting the requests to the ministry of finance, the minister of agriculture said that it would be too much to put all agricultural implements on the free list, but that it would benefit the agricultural classes to remove the duty from implements and machinery not manufactured in Russia.

In view of these recommendations, the minister of finance appointed a commission, consisting of representatives of the departments of finance, agriculture, and interior, as well as of farmers and manufacturers, to consider the subjects in detail. This resulted in a recommendation that agricultural implements and fertilizing substances be admitted free of duty into Russia, as follows:

(1) Such agricultural machinery and implements as are not produced in Russia, and the production of which requires special technical facilities, or which are patented, and therefore can not be established in the near future, viz: Harvesting and stacking machines, sheaf binders, steam plows, complex thrashing machines with double drums, tedders, horseshakes, assorting machines for grass seeds, assorting machines for potatoes, manure spreaders, pulverizers for sprinkling vines and trees, injectors for sprinkling sulphurous carbon under the roots of the vines in order to destroy the phylloxera, uninterrupted grape pressers, centrifugal cream separators and their parts, etc.

(2) Cloth for sheaf binders, stackers, and assorting machines.

(3) Special twine for stackers, made of manila hemp.

This twine formerly paid a duty of 52½ cents per 36 pounds, and the import of it duty free is even more desirable than the import of the stackers or sheaf binders themselves, as these latter, weighing about 1,080 pounds each, paid a duty of \$11.25, whereas the 3,600 pounds of twine necessary for the working of the machine during eight years paid a duty of \$52.50. But taking into consideration that the manila twine can be also used for other purposes, and that the import of it duty free would be detrimental to the Russian production of twine, especially as trials have been made to produce such twine in Russia from hemp imported from Manila, it was found necessary to limit the duty-free import of said twine to an amount not exceeding 1,080 pounds per machine—i. e., the quantity necessary for the working of the machine during three years.

Further recommendations were made as follows:

Duty on steam locomotives, imported together with thrashing machines and steam plows, to be lowered to 35 cents per 36 pounds.

Duty on reserve parts of agricultural machinery and implements, imported together with the machines, to be lowered to 35 cents per 36 pounds, when the machines imported have also to pay that duty; but when the machinery imported is duty free, then its reserve parts, coming at the same time, are also to pay no duty.

In order to acquaint landowners and manufacturers with the most recent inventions in that branch of industry, all kinds of new agricultural machinery and implements, imported for experimental stations and museums, to be admitted duty free.

The following products used as manure and for exterminating noxious insects to be imported free of duty: Strassfurt salts, chloride of potassium, sulphate of magnesium, kainite (mixture of chloride of potassium and sulphate of magnesium), saltpeter of Chile, sulphuric acid, copper-arsenic salts, the so-called caterpillar glue, and all other apparatus for the purpose of preventing or destroying the diseases of the vine and fruit trees.

The recommendations have been adopted, and the regulations will come into force for locomotives, agricultural machinery, and parts of same, on September 1/13, 1898. For the other articles mentioned above the regulations came into force June 6/18, 1898, and will apply to all machinery, implements, and other articles mentioned herein, up to December 18/30, 1903.

TARIFF REDUCTION ON IRON STEAMSHIPS FOR RUSSIA AND MINING AND AGRICULTURAL MACHINERY FOR SIBERIA.

[London Times, June 4, 1898.]

The Russian minister of finance has just decided to admit a number of various imports free of duty and to reduce the duties on certain others. These concessions, although temporary and experimental, constitute certain relaxations of the hard-and-fast tariff of 1891. First of all, as likely to extend the large amount of work already done for Russia by English shipbuilders, comes a ukase abolishing the high duties on seagoing vessels built abroad. Freedom from duty is granted for ten years, from July 1 next, on iron vessels for external navigation not imported in pieces; on steam yachts, dredgers, ice breakers for seaports, floating docks, chains, anchors, and wire cables for ocean-going ships and all vessels for service under the Russian flag on the Danube. A reduced duty of 20 rubles gold (\$10.28) per ton of carrying capacity is to be charged on iron vessels for rivers, lakes, and the Caspian Sea; also on tugs, barges, and floating cranes for work at ports on the Russian Pacific coast, besides 3 rubles (\$1.54) per square foot of boiler-heating surface in steamers of this category. The duty on wooden sea and river boats imported whole is fixed at 8 rubles (\$4.11) per ton, with the addition of the above-mentioned boiler tax.

M. Witte has also at last settled the much-debated question of the duties on imports into Siberia by direct sea route. The Moscow manufacturers, who claim the Siberian market exclusively for themselves, raised powerful opposition to the free importation by English shippers at the mouths of the Ob and Yenisei. The Siberians of the Yenisei Basin, however, were tired of paying tribute to Moscow in the form of exorbitant prices, and those on the Ob were anxious to have English purchasers and cheap sea carriage for their surplus wheat, which, even in this year of dearth and distress in many of the Russian provinces, lies piled up along the railway beyond Cheliabinsk in thousands of tons, awaiting buyers and rolling stock.

A special commission discussed the subject here several months ago with Muscovite, Siberian, and English representatives. The result, as now determined upon, is that the following imports by sea via Siberian rivers are to be free of duty: Machinery for Siberian gold works, salt, coal, agricultural machinery, and parts of machines, to an unlimited extent; machines for equipping Siberian mills and workshops, fishing nets and twine for the same, certain chemicals—but only in quantities actually required by works in Siberia—tin, lead, and olive oil in the quantities required in each separate business for preparing fish preserves, and sacks to the extent necessary for the actual export of grain. Duties of $4\frac{1}{2}$ rubles (\$2.31) per pood on Ob and 4 rubles (\$2.05) on Yenisei will be charged on brick tea, so that a Kiakhta tea merchant, who pays only $2\frac{1}{2}$ rubles (\$1.29), will be protected and the overland trade preserved from ruin.

The minister has made the above exceptions for the present year and hopes to have them prolonged for the next five years. All machinery for gold mining in Siberia is furthermore made free of duty on all the frontiers of the Empire. Duties are likewise repealed or reduced for five years from September 1 next on agricultural machinery. Steam plows, various kinds of thrashing machines, reapers, sorters, harrows, etc., will be free of duty, while duties on other special kinds will be reduced from 1.20 rubles (62 cents) to 50 copecks (25.7 cents) per pood. Finally, duties on nearly all chemical manures and remedies against diseases of trees and vines are abolished.

COMMERCE BETWEEN AMERICA AND RUSSIA.

Consul Karel, of St. Petersburg, in a recent report to the State Department, gives the following advance figures from the Russian official reports of the trade between America and Russia:

IMPORTED BY RUSSIA FROM AMERICA.

ARTICLES.	Amount.		Value.	
	<i>Poods.</i>	<i>Tons.</i>	<i>Credit rubles.</i>	<i>Dollars.</i>
Cotton.....	3,164,393	57,136	24,153,037	12,414,761
Coffee.....	2,254	41	22,458	11,543
Cacao.....	1,590	29	19,100	9,817

1895.....	29,456,599	15,140,691	2,207,342	1,133,863

PROPOSED UNITED STATES-RUSSIAN EXPOSITION.

[From Washington Post, May 15, 1899.]

Official assurances have been obtained that the Russian Government will make easy the way to display American exhibits either at St. Petersburg or Moscow after the close of the Paris Exposition. Wherever the proposition has been given any consideration it has been recognized as of great merit. Russia to-day offers a virgin field for the introduction of American manufactures. The possibilities of trade extension in that country are very great. When the subject was broached to the Emperor of Russia, in a personal interview by the then American ambassador, Mr. Hitchcock, some months ago, it drew forth an expression that the Russian people would be glad to see the practical results of American invention and manufacture. The project was so well received by the Russian Government that with the approval of this Government the following formal note was addressed setting forth the scope of the proposed display:

EMBASSY OF THE UNITED STATES,
St. Petersburg, January 8/20, 1899.

YOUR EXCELLENCY: Fully confident of your excellency's desire to promote in every way the historical relations of friendship and the growing intercourse between my country and the Empire of Russia, I wish to lay before your excellency a plan which could not fail to increase the commercial intercourse between our countries and consequently to promote international relations.

It has long been my opinion that an exposition of certain specialties of American manufacture in Russia would be of great interest and value, as exhibiting such progress as we have made in our development, for the study and comparison of the Russian Government and people in their industrial advance on similar lines, which might well serve a useful end by suggesting improved methods as well as stimulating enterprise and inventive faculty. Such an exposition would include methods and appliances for transportation, both by land and by water, including the most modern and improved devices in use in my country for conveying passengers and merchandise at the lowest cost; machinery of various sorts, agricultural, mining, and manufacturing, for operation both by hand and by power, for the growth and development of the natural products which are to be found in such abundant variety in this vast empire, such as cotton, flax, grain, timber, the metals, and other minerals, including coal and petroleum, and their by-products; electrical apparatus and machinery, both scientific and industrial; systems and apparatus for irrigation and water supply, with their economical application; apparatus and improvements used in preventing, controlling, and extinguishing fires; methods and apparatus employed in sanitation, including the canalization, or sewerage, of cities and towns, and the sanitary equipment of public buildings and dwellings; systems of lighting and heating; hand tools and implements which, while operated by the mechanic's hand, serve to lighten his labor, increase its fruitfulness, and improve its results. In short, all of the various processes and apparatus which the peculiar inventive faculty of my countrymen have brought to bear upon our own industrial development.

In considering how best such an exposition of American industries in Russia could be brought about, it occurred to my mind that following the international exposition to be held in Paris in 1900 it would be possible to bring to Russia practically the entire American exhibit, and to this end I consulted with the director-general of our American exhibit there, as well as with the representatives of many of our leading intending exhibitors, all of whom I found to be heartily in accord with the idea. Of course I was unable to make any promises to them beyond the assurance that I would endeavor to ascertain the views of the Imperial Government on the subject, and this is the object of the present communication.

Should the idea expressed in the foregoing meet with your excellency's approval, my plan would be to obtain from the Imperial Government a sufficiently large plot of ground, either at St. Petersburg or Moscow, as would best serve the purpose of the exposition, upon which should be erected suitable building or buildings worthy of the purpose, but keeping in view their temporary character, the cost of which I would have defrayed by my Government, asking in return for such expenditure by my Government and the American exhibitors such reduction in the rate of transportation through Russian territory, and such stipulation and concessions with respect to customs dues and other conditions as would operate for the success of the exposition and the mutual benefit of the Imperial Government and the exhibitors.

I would point out to your excellency that the accumulation at Paris, a point comparatively near at hand, adds a feature of feasibility to the proposition which would be unlikely to occur at a future time.

An expression of your excellency's views on this subject before my departure would be greatly desirable, in order that I may, if the Imperial Government is in accord with the suggestion, take the matter up immediately on my arrival in America, as the time is now too early to commence the necessary preliminary steps, not only as regards my Government, but with the proposed exhibitors, who would require timely notice of such proposed enlargement into a dual exposition.

I avail myself of this occasion to renew to your excellency the assurance of my highest consideration.

ETHAN A. HITCHCOCK.

His Excellency Count MOURAVIEFF, *Imperial Minister of Foreign Affairs, etc.*

Secretary Hay says the Russian Government has intimated willingness to do all that can be asked fairly in the way of official encouragement. Concessions may be made in customs, transportation charges may be reduced, and a site may be furnished. Recent advices to Secretary Hay from Ambassador Tower, who succeeded to the post at St. Petersburg when Mr. Hitchcock entered the Cabinet, show that so far as diplomacy is concerned little remains to be done.

This Government is now waiting to hear from the manufacturers who propose to send exhibits to Paris. Individual manufacturers have expressed hearty appreciation of the opportunity. If there is a general disposition manifested by boards of trade and associations of manufacturers, Congress, at the coming session, will undoubtedly enact the legislation necessary to put the project through. The cost will be nothing compared to the trade advantages secured. The demands of Russia are just beginning to be felt. On the part of the Russians there is a most friendly feeling toward the United States, and they are naturally inclined to adopt American methods rather than those of any other nation. The plan is to move the exhibits to either St. Petersburg or Moscow, and

to carry on for four or five months an exposition of American manufactures and products on the lines suggested in Secretary Hitchcock's letter.

Senators and Representatives to whom the proposition has been stated approve it warmly, and say that Congress will act promptly if there is manifested by manufacturers a desire for the display of their exhibits in Russia.

AMERICAN AND GERMAN COMPETITION IN RUSSIA.

[British Board of Trade Journal.]

The foreign office have received, through Her Majesty's ambassador in Berlin, a memorandum containing summary of an article published in the German trade journal *Export* on the competition of American goods with German, especially in the Russian trade.

Several reports emanating from the chambers of commerce in 1897 emphatically point out the importance of the competition of foreign countries, and especially of the United States, which the products of the German iron and steel industries have to meet in foreign markets. This view is now confirmed by the official statistics of exports. The exportation to Russia, which increased rapidly on the conclusion of the Russo-German treaty, shows for 1897 a considerable retrogression in a number of articles. Whereas during 1894 the iron and steel exports, as also those of iron and steel wares, machines, and vehicles amounted in value to £2,150,000 only, they had risen in 1895 to £3,000,000, and in 1896 to £3,850,000, during 1897 they fell to about £3,500,000. The loss is chiefly in locomotives and in machinery. In 1896 Germany delivered £450,000 worth of engines to Russia; in 1897 the value had fallen to £300,000. This loss, for its greater part, is to be accounted for by the keener competition of America, which country, since 1896, has greatly increased its exportation of locomotives, and especially to Russian markets.

At the time of the coronation, when 60 new engines were required, Russia first turned to England, but eventually bought them in America. Again, a short time ago, when 200 engines (the American papers say 400) were required by Russia for the Siberian Railway, the order was given to American firms, on account of lower tenders than those made by either English or German makers. It was thought that on account of the reduced capacity of English firms, consequent on the strike of the engineers, German firms would have secured the order, but it was not so.

The production of iron in America has developed to a quite unexpected extent, which enables the prices to be put down extraordinarily low, and it is pointed out that still greater expansion will take place. It is a fact that American iron and steel products are now placed on Russian, as also on other markets, at a price with which neither English nor German industries can compete.

HINTS TO AMERICAN EXPORTERS.

GOODS FROM THE UNITED STATES POPULAR AT RIGA.

The United States consul at Riga, in a recent report to the State Department, says:

The articles imported from the United States to this port are agricultural implements, hardware, tools, and similar goods in smaller quantities, besides cotton, rosin, lard, leather, and phosphate; but it is difficult to estimate the exact quantity and value of the same, as the goods, with the exception of phosphate and rosin, do not come direct in vessels from the United States, but are transhipped in continental or English ports, and the goods appear in the statistics as coming from that country where the transshipment has taken place.

American goods are liked in this district, because of their superiority and their packing, which is done with great care and in the most economical way as regards space; but the terms offered by English and German manufacturers are more liberal than those offered by our manufacturers, and the Russian merchants prefer buying their goods from those who give the longest periods of credit. The merchants here, as a rule, require from six to nine months' credit, while the American manufacturers generally require cash or, in some cases, payment even before shipment, and many negotiations have thus failed and the orders have gone to European competitors.

The goods exported from here to the United States consist chiefly of albumen, books (printed), bristles, flax, hemp, liquors, rennet, rubber waste, skins, etc.

The slower transportation of goods, in addition to higher sea freights between the United States and this country, is a drawback to the development of the trade. There being no direct steamer communication, all goods have to be transhipped in an English or other European port, the transit occupying, as a rule, about five weeks.

The United Steamship Company of Copenhagen has established a line of steamers from New Orleans, Newport News, and Norfolk, with monthly sailings to the Russian ports in the Baltic Sea, either direct or via Copenhagen. This line, having connection with the Chesapeake and Ohio, Norfolk and Western, Southern, Seaboard Air Line, and Atlantic Coast Line railway companies, will be of some importance for the importation of goods from the United States.

The want of agencies or showrooms where samples of American goods could be permanently exhibited to the Russian public, is also felt, and the establishment of such would no doubt tend to the improvement of the trade.

Horses, mostly for racing or breeding purposes, have been imported to Russia from the United States, and, as the trotters have been exceedingly successful, there seems to be a prospect of extending the importation.

EXISTING OBSTACLES TO TRADE BETWEEN RUSSIA AND THE UNITED STATES.

The existing obstructions to direct commercial trade between the United States and Russia, as stated by Consul-General Karel, are—

1. The slow and expensive transportation of freights, there being no direct transportation line between the two countries, goods shipped from Russia to the United States, or vice versa, being forwarded to British or other foreign ports for reshipment to their destination. The time occupied in the transportation of goods from St. Petersburg to New York averages five weeks, and the freight rates are, for example: Sheet iron, \$7.30 per ton; crash, \$8.02 per ton; goatskins, \$10.21 per ton, etc.

2. German manufactures are injuring American trade to a great extent, especially in the line of machinery. The Germans are now supplying Russia with machinery which was formerly imported from the United States. They imitate American patents, and, on account of cheaper labor and cheaper transportation, can afford to sell for less than the American manufacturers.

3. Manufacturers and business firms in the United States are in the habit of doing business promptly on thirty, sixty, and ninety days, which is too short for Russian purchasers. The latter usually require six, nine, and even twelve months, but they are willing to pay, and do pay, prices accordingly. Again, American exporters do not seem to be acquainted with the Russian trade. They lack confidence in the Russian merchant, and many goods from the United States are sold first to English commission men, who have a more intimate knowledge of business methods in Russia, and are thus enabled to sell the same goods in the latter country for the desired time, and to charge profits thereon accordingly.

The sale of American manufactures in Russia would be much facilitated by the establishment of a suitable agency where samples of goods would be permanently exposed for examination by the Russian public and where selections and orders could be made. American goods are liked in Russia, and are acknowledged to be neat and practical. American manufacturers and business houses, if they wish to do business at home, are obliged to send agents with samples to purchasers throughout the United States several times a year. Such a course is much more necessary in foreign countries. Working up trade through the personal efforts of the United States consuls is impracticable. The consul can advise and furnish information concerning the trade of the country in which he is located, but he can not take a personal part in soliciting orders.

Commercial credits.—The Government bank of Russia makes loans on goods of home manufacture in transit, not easily spoiled—i. e., on warehouse receipts, bills of lading of steamship and forwarding companies, and on duplicates of railway bills, etc., but loans on goods of foreign manufacture can be made only by a special order from the council of the bank confirmed by the minister of finance. Bills are discounted for three and six months, in exceptional cases for twelve months, and the rates charged are $4\frac{1}{2}$ per cent for three months; $5\frac{1}{2}$ per cent for six months; 7 per cent for nine months, and $7\frac{1}{2}$ per cent for twelve months.

THE NIJNI NOVGOROD FAIR.

[New York Journal of Commerce, May 20, 1899.]

Frequently local exporters transacting business with Russia have approached manufacturers here for the purpose of calling attention to the importance, from a business point of view, of the fair at Nijni Novgorod, which is held every year from July 27 to September 6. That city has a population of nearly 95,000, and is only 227 miles from Moscow. In answer to inquiries made by parties in Indiana, Consul Thomas Smith, at Moscow, has sent some valuable information concerning this fair, which in part is as follows: "It is attended by nearly half a million of people from both European and oriental Russia, and the amount of business generally transacted is estimated at about \$35,000,000. The following goods are sold: Cottons, prints, carpets, cloths, linen, flannels, silks, lace, bags of jute and hemp, leather, skins, chamois, furs, paper, copper, cast iron, enameled ware, cutlery, agricultural implements, implements for mechanical and other industries, seeds for farmers, oats, corn, wines, spirits, paints, varnish, lime, cement, etc. Sheet iron, boiler plates, copper, precious stones, and a variety of geological specimens from Siberia are also exhibited, as well as cotton in a raw state from central Asia and Persia, and turquoises, silks, and silverware, made in oriental style, from Persia, Bokhara, Taschent, etc. The fair is well managed, the governor of Nijni staying there during the time it is open. He has a military staff, and the discipline is very strict. The merchants have their own committee, before which everything concerning trade is laid. On the fair grounds there are hotels, churches, dining saloons, theaters, and Tartar and Chinese quarters. There is good sewerage and waterworks, and the place is surrounded by a canal of water as a protection against fire. Some three months before the commencement of the fair notices are inserted in the papers stating the stores that are to be let, giving all particulars and where to apply. The rents of the stores range from \$100 to \$1,450; but, in addition to this, there are taxes for the police, city, and other purposes, which amount to about 5 per cent on the rent. It must be understood that the word "fair" does not signify an exhibition, but a large market where goods are exposed for sale and yearly contracts concluded."

TRADE OPENINGS IN SIBERIA.

The Board of Trade Journal, London, January, 1899, quotes the following from the London and China Telegraph:

A German firm has one of the largest establishments in the town of Blagovestchensk. The premises consist of a handsome building of brick, arranged so as to look like stone, with lofty showrooms and electric light within and without. It is like most shops of any importance in Siberia—a general shop where groceries and stationery, clothes and machinery, and all manner of other goods may be bought. They do business wholesale as well as retail. The same firm has a depot in the next province westward, at Strelensk; and at Vladivostock its establishment is, it is said, larger than the one at Blagovestchensk. In the same square is a large Russian shop of the same kind, and not far off a French firm carries on a retail business, especially in perfumery, French preserves, and ladies' hats. It appears strange that no Englishman should make an attempt in such a fast-growing city of some 50,000 inhabitants as Blagovestchensk—with a frontage to the Amur of 6 or 7 miles, another river (the Zega) as its eastern side—a city which is beginning to turn the wooden buildings in its splendidly broad streets into brick, if not into stone.

PETROLEUM PRODUCTION IN RUSSIA.

[From report of United States Consul Chambers, September, 1897.]

The production of crude petroleum in Russia continues to increase, as is shown by the statistics annexed, and notwithstanding the steady and material increase in production the price of crude has been maintained at a high figure for nearly two years, averaging for the past year and a half about 35 cents per barrel of 42 gallons at refineries, which is equivalent to about 32½ cents per barrel at wells. This is also the price to-day.

Early in this year the Bibi-Eibat district, which is between 2 and 3 miles south of Baku, was visited by two very disastrous fires, both, it is asserted, having been caused by stones thrown out from a flowing well striking iron. The first occurred in February in a well which was said to be flowing at the daily rate of 50,000 barrels. The fire continued some days. Owing to favorable winds it did not spread to a great extent, but it destroyed several wells and 500,000 to 600,000 barrels of crude oil, stored in pits on the property where the well was located. The second fire started a few weeks later, upon a well which was said to be flowing about 100,000 barrels per day, not more than half a mile south of the first fire; this continued for several weeks, as it was found impossible to stop the well flowing, and destroyed twelve or thirteen wells and a large amount of crude oil which was stored in pits near by.

The increase in the crude production is not due to larger wells, but to a larger number of wells, as the total number of wells producing in July, 1897, was 668 against 566 in the same month last year; and a careful review of the statistics at hand covering the last two or three years shows that the daily production has increased about 230 barrels for every well added to those producing. If this rate of increase is maintained in the future, as there is every reason to believe it will be, the production must materially increase because of the great advance in drilling operations. On the last day of August last year there were 156 wells drilling, 139 being drilled deeper or cleaned out, and 49 new derricks ready to drill, while upon the same day this year there were 265 wells drilling, 122 repairing or drilling deeper, and 90 derricks. In the first six months of this year 138 wells were started, while only 78 were commenced in the same time last year.

This great increase in drilling operations is wholly due to the fact that last year was probably the most profitable the trade has ever had, and there is no doubt that the producers believed that prosperity was permanent. It now looks, however, as though the business were being rapidly overdone. The only producers making money are those who have no refineries and who sell their crude, for there is no doubt that at present prices crude oil producing is exceedingly profitable. Unfortunately, however, at least 75 per cent of the crude production is refined by those who produce it, as they combine refining and producing; and in this manner they not only lose the profit upon the crude, but also lose upon their refined, as the prices of the latter product are so low that it is absolutely impossible for a refiner to pay existing prices for crude and make money. As a result of these conditions, it is asserted that more than half the refineries at Baku are now not working.

Last year the price realized for refined oil for export was a trifle over 2½ cents per gallon at refinery, while this year the price has been steadily declining, so that some refined has been sold which did not net refiners more than one-third that figure, and the average for the year so far will hardly be more than 1½ cents per gallon. Last year crude oil was about the same price as this, and residuum was a trifle cheaper, but the difference in the price of residuum last year and this will not nearly compensate for the decline in price of refined; and yet the whole talk at Baku is of the profitableness of residuum, and because it is a tenth of a cent per gallon dearer than crude, much crude is being sold and shipped as residuum; so much, in fact, that the yield of crude this year in residuum has been over 60 per cent, while the refined has been only about 20 per cent. The average is 25 to 30 per cent refined and 45 to 50 per cent residuum from the crude. My impression, based upon very accurate and reliable information, is that at present prices of crude, residuum, and refined, the refiner buying crude must lose not less than three-fourths of a cent upon the refined he produces.

ESTIMATE OF THE FINANCIAL RESULTS OF THE BAKU OIL BUSINESS IN 1895 AND 1896.

DESCRIPTION.	1895	1896
EXPENSES.		
Producing:	<i>Dollars.</i>	<i>Dollars.</i>
Drilling 146,048 feet in 1895 and 196,000 feet in 1896, including cost of machinery	2,712,320	3,640,000
Royalty, one-half of a copeck (about two-tenths of a cent) per pood (36.112 pounds) on 377,000,000 poods (13,614,224,000 pounds) in 1895 and 386,000,000 poods (13,939,232,000 pounds) in 1896	980,200	1,036,000
Working expenses, 1 copeck (about four-tenths of a cent) per pood	1,600,400	2,672,000
Pipeage, storage, etc., one-half of a copeck per pood	980,200	1,036,000
Refining:		
Labor, etc., 2 copecks per pood on 87,200,000 poods (3,148,966,400 pounds) of refined in 1895 and 89,300,000 poods (3,224,801,600 pounds) in 1896	910,000	928,720
Chemicals, 2 copecks per pood	910,000	928,720
Office expenses, storage of refined, and other expenses	455,000	461,360
Total	8,908,120	10,105,800
RECEIPTS.		
From sale of 81,000,000 poods (2,925,072,000 pounds) of refined in 1895 at 16.2 copecks per pood and 85,500,000 poods (3,087,576,000 pounds) in 1896, at 19 copecks per pood	6,823,440	8,447,400
From sale of 180,400,000 poods (6,514,704,800 pounds) of residuum in 1895, at 6.1 copecks per pood and 185,500,000 poods (6,520,021,600 pounds) in 1896, at 7.5 copecks per pood	5,722,080	7,231,575
From sale of 15,000,000 poods (541,680,000 pounds) of crude in 1895, at 6.9 copecks per pood and 25,485,000 poods (920,314,320 pounds) in 1896, at 7.5 copecks per pood	512,880	988,714
Total	13,058,400	16,667,689
Apparent profits	4,180,280	6,561,889

NOTE.—One hundred gallons of American petroleum produce about 75 gallons of refined illuminating oil; 100 gallons of Russian petroleum produce about 37½ gallons of refined illuminating oil.

THE USE OF PETROLEUM ON RUSSIAN WAR VESSELS.

The Bollettino delle Finanze states that the Russian Admiralty continues to extend the use of petroleum on war vessels for the heating of the boilers. The old armored cruiser *Admiral Greig*, which has been selected for experiments in steam production by petroleum, is to have one of its machines fitted with a new pulverizer on the Svenson system, which economizes the fuel and burns it without smoke. Steam is not used in the pulverization, but it is obtained by means of a jet of petroleum on a steel apparatus of special construction at a pressure of 7 kilograms. On board this vessel there will be four different systems of apparatus for projecting the combustible liquid under pressure, viz, those of Kaufmann, Daniline, Zanuchevski, and Svenson. The oil is stored in tanks.

DEVELOPMENT OF RUSSIAN MINING AND METALLURGICAL INDUSTRIES.

[From British Board of Trade Review.]

The Russian ministry of finance has recently issued an interesting publication relating to the goods traffic on Russian railways, one part of this work dealing exclusively with the question of the transport of minerals. According to the *Moniteur Officiel du Commerce*, which has devoted some attention to a review of this publication, the production of ores has shown during the last three years a decided increase, and the total quantity carried over the whole of the Russian railways amounted to 44,850,000 poods (pood—36 pounds avoirdupois) in 1890, 46,812,000 poods in 1891, and 61,579,000 poods in 1892, an increase in the latter year of 32 per cent as compared with 1891, and 37 per cent as compared with 1890.

The greater part of this increase is principally made up of iron ore, the production of which in 1893 showed an increase of 6,653,725 poods, and of which the working is concentrated, with the exception of certain mines situated in the Ural Mountains, in the south and southwest of Russia. The richest beds are found in the environs of Krivoi-Rog, on the border of the governments of Kherson and Ekaterinoslav, and these are worked by a French company. The output on these railways has been as follows: In 1877, 10,008,000 poods; 1888, 13,995,000 poods; 1889, 21,003,000 poods; 1890, 22,998,000 poods; and in 1891, 28,816,000 poods. Thus the production has almost trebled in five years in the southern districts of Russia. The number of mines working, which was 15 in 1887, amounted to 25 in 1891.

The principal points of dispatch and of the destination of these ores during the triennial period 1890 to 1893 were the stations of the Ekaterinskaia and the Donetsk railway, which form the center of the mining industry in southern Russia. The largest quantities are sent from the stations situated near Krivoi-Rog. For example, from the Karnavajka 16,760,000 poods were dispatched in 1890, 19,448,000 in 1891, and 20,105,000 in 1892. From Dolghinzaa station 34,000,000 were dispatched in 1890, 35,000,000 in 1891, and 45,000,000 in 1892. From Krivoi-Rog the figures were 98,000, 443,000, and 3,400,000 poods, and similar increases have been observable at most of the other stations.

After iron ore, manganese ore comes next in importance as furnishing a large proportion of the goods traffic on Russian railways. These ores are worked in the Caucasus, in the Ural districts, and in the government of Ekaterinoslav. Among all manganese-producing countries Russia stands at the head, and it was only during the second half of the decennial period 1880-1890 that the working of the ore was first undertaken in Ekaterinoslav. Notwithstanding this, the production in that government amounted to 90,000 poods in 1888, 342,000 in 1889, 521,000 in 1890, 660,000 in 1891, 1,795,000 in 1892, and 4,739,933 poods in 1893. The increased production of ores has naturally had its effect upon the production of iron and steel, which at one time, and only very recently, came from Poland and the Ural Mountains alone, but which is even supplied in considerable quantities throughout the southern districts of the Empire. It is the confident opinion of authorities in Russia that the iron and steel industry will become the most important in the country. The consumption of iron and steel in Russia amounts to from 55,000,000 to 58,000,000 poods annually. Experience has shown of late years that the mineral wealth of southern Russia yields in nothing to that of the Ural Mountains, and it enjoys greater advantages through its proximity to the Donetsk coal basin.

In 1890 the production of iron and steel amounted to 8,623,000 poods, while in 1891 and 1892 it had increased by about 30 per cent, and represented a total of 11,000,000 poods; during the same period the works of the district in the neighborhood of Moscow were able to reduce their production from 8,000,000 to 6,000,000 poods, those of the northern governments from 6,000,000 to 5,000,000, and the Siberian works from 265,000 to 167,000 poods. In the neighborhood of the Vistula there was no change to notify in the production of iron and steel, which remains at 7,600,000 poods; but while the increase attains the rate of about 30 per cent in the South, it does not exceed 20 per cent in the Ural Mountains, the actual figures for the latter being from 17,000,000 to 21,000,000 poods.

It appears, therefore, that in three of the six districts in which the metallurgical industry is established in Russia a falling off is observable in the production; in one alone it remains stationary; and it is only in the Ural, and particularly in Southern Russia, that the industry may be said to be advancing. In 1890 the proportion to the total production in the South was in the ratio of 17 per cent; in 1892 it was 21 per cent. It is the government of Ekaterinoslav that now occupies the first place for the quantity of steel it delivers for consumption. This quantity amounted in 1892 to 9,000,000 poods, while the works of the governments of Pietrkow, Orel, and St. Petersburg only supplied about three or four millions each. As regards the coal mines, the Messenger Officiel recently stated that the production of the 89 collieries of the southern provinces of European Russia amounted in 1893 to 134,000,000 poods against 125,000,000 in 1892.

The immediate consequences of this rapid development of the mining and metallurgical industries in Russia has been the continued diminution, a diminution which has become more and more accentuated, of the importation of foreign iron and steel. Thus, for example, the Odessa custom-house showed by their returns an entry of 806,000 poods in 1890, 565,000 poods in 1891, and 247,000 poods in 1892; while similar results are observable in the returns of the Batoum and Woloziska.

PIG IRON AND COPPER IN THE URALS.

[From advance sheets Consular Reports, May 24, 1899.]

Consul-General Holloway, of St. Petersburg, on April 18, 1899, transmits the following translation of an article in the Commercial Gazette:

The statistics concerning the production of pig iron in the Urals during 1898 and the estimates for the first half of 1899 have just been published. In 1898, 690,161 tons of pig iron were smelted—32,258 tons more than in 1897—and one hundred and fifteen high furnaces in sixty-nine factories were in action. For the years 1894 and 1898, the comparative data were as follows:

DESCRIPTION.	1894.	1898.
High furnacesnumber..	113	115
Quantity smelted.....tons..	536,616	690,161
Average productiveness per high furnace.....do...	4,726	6,000
Average amount produced per daydo...	13	16

There is no doubt that the metallurgical industry of the Urals continues to develop, notwithstanding such unfavorable conditions as the lack of railroads and mineral fuel. The productiveness of the factories, as seen above, has increased during the last five years 29 per cent; the technical part—that is, the productiveness of the work of the high furnaces—has increased 26 per cent, and the amount daily smelted by each furnace, 25 per cent.

During the first half of the present year it is estimated that 380,645 tons of pig iron will be smelted. Taking into consideration the fact that six new high furnaces are being constructed in the Urals and six are being remodeled for a larger production, it is probable that during the second half of 1899 there will be a production of pig iron which will make the output for the whole year amount to 775,000 to 790,000 tons.

The beginning of the year was very animated in the Urals. The demands for mines, especially of iron, manganese, and chrome, were exceedingly large. Agents arrived from southern Russia, principally from Novorossisk. The Urals have been visited by different capitalists who wish to organize new metallurgical enterprises. There are three principal reasons why the Urals are at present attracting universal attention: (1) The projected railroad from Cheliabinsk to Tsaritsine; (2) the hope that southern Ural ore will be demanded by the Donetz basin, and (3) the expectation that Siberian coke will be brought to the Urals, which will cause the development of the metallurgical industry there, as the southern region possesses inexhaustible mines of ore, the working of which will not cost more than 62 cents per ton. The richness of the magnetic iron ores is such that there are mines where it is impossible to drive in sleighs, as the iron slides, under the influence of the magnet, stick to the ground.

Latterly, the demands for copper mines have increased, owing to the rise of prices of copper. This is unexpected, as but five years ago copper-smelting factories gave up their mines to the Government. The copper industry has declined in the Urals; but should copper speculations continue abroad the revival of the industry in Russia may be expected. In some of the factories in Tagill a ton of copper is sold at \$480.50, whereas two years ago it was sold at \$298 to \$372 per ton. Chemical factories in the district of Elabuga have great demands for copper, and new mines in the government of Viatka have been discovered. This government was formerly one of the first in the smelting of copper, but now only the peasants, when they are free from other work, extract the ore and take it to Kukmor and other villages, where it is smelted in ordinary smithies and made into cheap articles. However, there are two or three workshops which make larger articles and even samovars.

RUSSIA AS A GOLD PRODUCER.

The importance of Russia as a gold producer has never been fully appreciated, partly because of the remoteness of the chief gold fields, and partly because the output is carefully kept at home, and but little of it enters into the world's general stock. According to the New York Engineering and Mining Journal, very few people realize that, taking the production of 1895 as a basis, the Russian mines furnish about one-sixth of the total output of the precious metal, and that the probability is that this proportion will increase rather than diminish. So far as the Siberian gold fields, which furnish the greater part of the production, are concerned, it may be said that the work already done is entirely superficial. Only the placers have been worked, and those generally in a rather primitive way, while explorations have been in the main limited to the haphazard work of prospectors. A few Russian engineers have from time to time undertaken some more scientific work, but this has been limited to a few districts. Deep mining is almost unknown, and the search for gold-bearing veins has hardly been begun anywhere outside of the Ural region. It seems probable that a few years will see an important change. Already foreign capital is becoming interested, and preparations are being made for the exploitation on a large scale and with modern appliances of the rich placers of the trans-Baikal and the upper valley of the Amour. The work already done in those districts gives assurance of success in the future.

DEVELOPMENT OF COTTON PRODUCTION IN RUSSIA.

The American cotton plant and American methods of cultivation and harvesting are apparently rapidly rendering Russia at least independent of the United States in this line, and perhaps preparing her to enter the export field in cottons. A report in the British Board of Trade Review, based on a report of the Italian consul at Batoum, discussing the recent developments in this line, says:

Ever since the days of the Kings of Georgia, the cultivation of cotton has been carried on throughout trans-Caucasia and Armenia, and, according to the geographical notes of Bagration, flourished especially in the government of Kutais, in Kaketia, and the district of Zakataly.

When the country came under the sway of Russia, this cultivation continued to form an important industry among the people of the trans-Caucasus, each peasant proprietor deeming it indispensable to place a portion of his plot under cotton as soon as possible, while the Government contributed no little to the development of the industry by distributing gratis a better quality of seed imported from abroad, and by introducing the best class of machinery for dividing the cotton seeds from the fiber.

In Kaketia the populace used to wear cotton clothing woven by their women folk; and in Ordubat (Armenia) the art of cotton weaving was such a profitable one that one-half of the population was composed of cotton weavers who supplied not only the province of Erivan, but also the neighboring districts.

This success was due to the high price of cotton, and the low price of different seeds; but in time such a condition of affairs was reversed. The textiles fell in value in competition with factory-made goods and the seeds rose in price. The efforts made by the

Government were thus paralyzed, and, moreover, in the regions where the plant was grown with the greatest success, the soil dried up, spoiling the crops. The chief cause of this, according to competent observers, was the diminution of vegetation and the deforesting of the land, and the result was that the industry became restricted to the province of Erivan, which appeared to best fulfill the conditions necessary to its growth and prosperity.

In 1861 the crop amounted to 30,000 poods (pood=36 pounds avoirdupois); in 1862, to 60,000 poods; in 1863 this total had increased to 150,000 poods; in 1873, to 273,000 poods; but in 1881 the figure fell as low as 42,000 poods, improving, however, to 99,000 poods in 1884.

From the above figures it would appear that as soon as Erivan found itself competing with American production its output declined. The fitness of the Erivan soil for the development of this industry, however, and the absence of machinery in use for separating the fiber and the seed, attracted the attention of the merchants and manufacturers of Moscow, and cotton was the first agricultural product of the Caucasus which drew the serious attention of Russian capitalists to that country; in consequence, this industry regained not only its highest development in the province of Erivan, but again became the most remunerative industry (more than the vine, grain, or tobacco) in the provinces of Baku, Elisabetpol, Tiflis, and Kutais. Russia now imports yearly from eight to ten million poods of foreign cotton.

Since about the year 1880 one important Moscow house has sent thousands of poods of the best American seed to the Caucasus, distributing it everywhere gratis with instructive pamphlets on the subject translated into the language of the country.

At first this experiment did not seem to have much effect, but in reality it marked the opening of a new era for the industry, and it induced the Government to place at the disposal of the chief centers of cultivation American cotton gins and saw gins, used in the separation of the seed from the fiber. The workmen sent to set them up were, however, completely ignorant of the mechanism, and so the peasants preferred to retain their own system, though in so doing they ruined the fiber.

In 1885 other prominent firms of Moscow and other towns took up the question, establishing in Erivan their agencies, supplied with the best machinery of all kinds and the best foreign seed, furnishing instruction gratis, teaching the people the use and management of the machinery, and placing it at their disposal when they became expert at it, and, moreover, buying up all the crop either for their own factories or for resale.

A cultivator, for example, who could only get in 20 or 30 poods of cotton, and originally did not know to whom to sell it, had now a buyer at hand, with offers also of advances on future crops at market prices.

The peasants, thus freed from anxiety as to sales and from the heavy preliminary expenses with regard to machinery and transport, adapted themselves more and more to the new mechanical appliances, and endeavored as much as possible to extend the industry wherever the land was found to be suitable. The firms above mentioned, finding the soil of the trans-Caucasus in many parts so well adapted to cotton plantation, did not stop at Erivan, but endeavored to induce the peasants in all parts to make experiments, at the same time favoring them in every possible way, so that while in the year 1884 Erivan produced but 98,920 poods of cotton, in 1890 this amount had increased to 600,000 poods; for, in the intervening years, nothing but cotton was sown in fields that had hitherto produced rice, sesame, and other grains and seeds, and even the roads were now transformed into cotton-bearing land.

BEET SUGAR PRODUCTION IN RUSSIA FROM 1800 TO 1898.

[From report to British Government by Consul H. Smith, July, 1898.]

In view of the conflicting accounts of the beet-root sugar industry of Russia, I have prepared the following particulars of the industry from its first introduction into the country until the present campaign of 1897-98. Perhaps this résumé will put the extent of Russian sugar trade more clearly before the public interested in the subject than the references made thereto in the annual trade reports—references which only refer to the production, etc., of the year in question, without keeping always clearly before the reader the various combinations introduced by the Government and private syndicates for the regulation of production, home consumption, and disposal of surplus production. The following particulars ought to be all the more welcome to those interested in this trade, owing to the sugar question having been prominently before the public of late.

The production of sugar from beet root was first brought into public notice by a Berlin chemist in the year 1747, but little or no attention was given to the discovery until the year 1790, when the question was taken up in a practical manner. The first beet root sugar factory was erected in Silesia in Germany, and immediately thereafter the industry was inaugurated in France, Napoleon I taking a personal interest in the discovery and authorizing five schools to be opened for the practical study of the subject.

The question was taken up in Russia, not by a chemist, or one having any special training, but by a landed proprietor, Major-General Blackennagel, who in 1800 built the first factory for producing sugar from beet root on his estate in the province of Tula. Until the year 1809 this was the only factory in Russia, but seven or eight were built about this time, and between 1830-40 there were over 600 factories at work in the country. It is worthy of note that these factories were built in the provinces of Tula, Kaluga, Orel, Tambow, Smolensk, Grodno, Mohilew, and Kursk, and it was only about the year 1840 that the industry began to force its way into the southern provinces, where it has developed with such strides as to have become one of the leading industries of Russia.

Up to the year 1860 the factories were mostly built and owned by the landed proprietors, but with the freedom of the serfs, private firms, and more largely joint-stock companies took up the trade, and in many cases purchased the factories owned by the magnates.

Naturally, the factories existing up to 1860 were mostly of very primitive construction, wooden sheds containing plant costing from £120 to £150, and bearing little or no comparison to the palatial factories of the present day, built of brick and iron and costing from £60,000 to £150,000. In 1848 there were 380 factories at work, with a total output of 1,195,000 poods (19,272 tons), or an average of 3,145 poods (50.75 tons) each, and of this production the six largest factories each produced about 15,000 poods (242 tons), and 43 of the smallest each produced less than 1,000 poods (16 tons). In 1858 the same number of factories were producing 2,438,420 poods (39,330 tons), or an average of 6,417 poods (103.5 tons). In 1868, with 300 factories at work, the production was 6,840,700 poods (110,334 tons), or an average of 22,802 poods (367 $\frac{3}{4}$ tons). In 1881, with 234 factories at work, the production was 15,994,390 poods (257,974 tons), or an average of 68,360 poods (1,102 tons). In 1891, with 225 factories at work, the production was 28,362,954 poods (457,467 tons), or an average of 126,057 poods (2,033 tons).

For the present campaign of 1897-98, with 238 factories at work, the production is officially given as 46,795,000 poods (754,758 tons), or an average of 196,618 poods (3,171 tons).

Therefore we find that the production from 1848 to the present date has increased in the following ratio:

YEAR.	Quantity.		Increase.	Number of factories in operation.	YEAR.	Quantity.		Increase.	Number of factories in operation.
	<i>Poods.</i>	<i>Tons.</i>	<i>Per cent.</i>			<i>Poods.</i>	<i>Tons.</i>	<i>Per cent.</i>	
1848.....	1,195,000	19,272	380	1881.....	15,994,390	257,974	134	234
1858.....	2,438,420	39,330	104	380	1891.....	28,362,954	457,467	77	225
1868.....	6,840,700	110,334	180	300	1897-98.....	46,795,000	754,758	65	238

The total quantity produced by Russia from 1800 to 1892-93 campaign was 491,112,279 poods (7,921,166 tons). Of this quantity, 447,055,493 poods (7,210,573 tons) were consumed in Russia, while 44,056,786 poods (710,593 tons) were exported to Europe and Asia, as detailed later on.

In keeping with the productive power of each factory during the time already mentioned, so was the percentage of sugar extracted from the beet root. In the early years of the industry one-half pound of sugar was extracted from 12 poods (4 cwts.) of roots. In 1830 this had risen to 6 pounds, in 1848 to 15 pounds, in 1863 to 22 pounds, in 1872 to 29 pounds, in 1882 to 35 pounds, in 1892 to 42 $\frac{1}{2}$ pounds, and at present date to 44 $\frac{1}{2}$ pounds. Therefore we find that the quantity of sugar extracted from the same quantity of beet root from 1800 to present date has increased as follows:

YEAR.	Quantity.	YEAR.	Quantity.
	<i>Pounds.</i>		<i>Pounds.</i>
1800.....	$\frac{1}{2}$	1872.....	29
1830.....	6	1882.....	35
1848.....	15	1892.....	42 $\frac{1}{2}$
1863.....	22	1897-98.....	44 $\frac{1}{2}$

Herein we see the great advance which has been made not only in the improvement of the machinery used in the trade, but also the scientific cultivation of the beet root, a cultivation which has been so scientifically carried out that the sugar-yielding part has been brought to a state of practical perfection.

The world's production of sugar from the four campaigns, 1893-94 to 1896-97, was as follows:

	QUANTITY.			
	1896-97.	1895-96.	1894-95.	1893-94.
Beet-root sugar:	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>

RUSSIA AS A SUGAR GROWER.

Russia is fourth in the list of beet-sugar producing countries of the world. Recent estimates of M. Geiseker, of Brussels, a leading sugar statistician of Europe, puts Russia's sugar production in 1898-99 at 750,000 tons, and that of the beet-sugar countries of all Europe during the past five years as follows:

COUNTRY.	1893-99.	1897-98.	1896-97.	1895-96.	1894-95.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>

NAVIGABLE WATERWAYS IN RUSSIA COMPARED WITH THOSE OF OTHER COUNTRIES.

The following statement of the length of navigable rivers and canals in the principal countries of the world is published by the *Jahrbuch der Naturwissenschaften*. It gives to Russia a greater length of navigable waterways than any country except Brazil; and when to this is added the proposed trans-Siberian canal, described in the accompanying article, "Siberian development by new land, water, and rail transportation routes," the length of navigable waterways in Russia will, if these figures be accepted, exceed that of any other country of the world:

LENGTHS OF THE NAVIGABLE RIVERS AND CANALS OF THE MOST IMPORTANT COUNTRIES OF THE WORLD.

COUNTRIES.	Rivers.	Canals.	Totals.
	<i>Miles.</i>	<i>Miles.</i>	<i>Miles.</i>

INTERNAL WATERWAYS OF EUROPEAN RUSSIA.

The total length of rivers and canals in European Russia, according to the *Revue de Statistique*, is 67,596 miles, of which 46,202 miles are available for use—i. e., 30,338 miles navigable and the remainder for floating purposes only. The canals aggregate 499 miles in length and canalized rivers 648 miles. The Volga alone accounts for nearly 50 per cent of the navigable waterways. The average length of time for navigation varies naturally according to geographical distribution; it may be reckoned at about 158 to 220 days from the Neva and the Ladoga and Onega lakes; at from 221 to 240 days for the Niemen; at from 213 to 244 days for the western Dwina, and at from 156 to 190 days only for the northern Dwina. During the last five years the Russian Government has devoted nearly 150,000,000 francs (£6,000,000) to the improvement of navigable waterways. The goods carried are principally wood for building purposes, grain, petroleum, etc., salt, iron, coal, sugar, hemp, cotton, fish, and spirits.

BALTIC-BLACK SEA CANAL NOT AUTHORIZED.

Recently published reports indicating that a ship canal to connect the Baltic and Black seas is under consideration by the Russian Government are pronounced inaccurate by United States Consul General Holloway, who says in an official communication to the State Department:

This article was reproduced in many leading American newspapers, and I received a large number of letters from engineers, newspapers, contractors, and manufacturers of excavating machinery, asking for specifications, cost of labor, details as to contracts, etc. I called on Prince Hilkoŭ, minister of ways and communications, handed him a newspaper containing the account, and asked if there was any foundation for the statements contained in the article. He was amused, and said:

"Some time since, a French engineer called on me with the map from which this is copied, as well as an estimate of the cost of building the same. I asked where he procured the data his estimates were based upon. He said, 'From Russian maps.' I then informed him that there were no correct maps of that portion of Russia, and his canal was 900 miles short."

The Prince added that the Russian Government had no idea of building such a canal; indeed, he doubted if there was sufficient money in Russia to do so.

NEW RUSSIAN PACIFIC STEAMSHIP LINES WANTED.

[Consul-General Holloway to State Department, November, 1898.]

A contributor to a Russian magazine has published an article setting forth the necessity of organizing a Russian steamship line on the Pacific Ocean, in order to establish communication between Siberia and the United States, to connect with the Siberian Railroad. The same author goes on to say:

Foreigners have already established three new steamship lines, having Vladivostok as a terminal point. One of these—the American-Japanese—has for its western terminus San Diego, the most southern port of California, and will work in connection with the Atchison, Topeka and Santa Fe Railroad. The steamers will also call at Honolulu. The second—the English-Canadian—will work in connection with the Canadian Pacific Railroad Company, and sail from the cities of Vancouver and Victoria. Two of its large steamers, about 5,000 tons each, will run regularly from these cities to Hakodadi and Vladivostok. This line is controlled by the Canadian Railroad and the Empress Line. The reason for its establishment is said to be the rapid development of the Russian Pacific coast and the Siberian Railroad, and the demand for American products—among others, wheat, flour, timber, and materials for railroads and factories. The third line belongs to the North German Lloyd of the Bremen Steamship Company. It has not yet selected its terminus; its directors are hesitating between San Francisco and Los Angeles.

The longer Russia remains inactive in this direction, the smaller are her prospects of occupying the place which is due her in the transcontinental and oceanic traffic. This inactivity will greatly influence the future well-being of the great Siberian Railroad.

Passengers and mails can reach Vladivostok via the Vancouver route in thirty days from St. Petersburg, while it requires thirty-five days via the trans-Siberian route, 1,151 miles of which is made in partially closed conveyances on rough roads, traveling night and day. By the usually traveled route the trip requires forty-five days.

The Trans-Siberian Railroad will be about 3,644 miles in length when completed; 2,015 miles are completed from the St. Petersburg side and 478 miles from the Pacific coast or Vladivostok end, leaving 1,151 miles yet to be built. The construction is going on at the rate of 331 miles per year.

The Danish vice-consul at Louisville, Ky., in a recent communication to the State Department points out the fact that the United States has practically direct communication with Russian and Baltic ports by the Forenede Virginia Baltic Line from Newport News and the Forenede Gulf Baltic Line from New Orleans, the two lines being operated by the United Steamship Company, of Copenhagen, a large and wealthy corporation owning one hundred and twenty vessels and carrying on an extensive trade in the Baltic. Although goods for Russia would have to be transshipped at Copenhagen, says Mr. Currie, it would be into vessels owned by the same line; and all of the vessels in the Newport News service take through cargo to Russia, and, with the assistance of the railroads of the United States, give through rates from point of origin to destination.

On April 30, 1899, a steamship line was established to run vessels direct from New York to St. Petersburg, beginning with one vessel each month.

RUSSIAN STEAMSHIP SERVICE IN CHINESE WATERS.

The Straits Budget publishes information that the Russian Government is about to inaugurate an extension of the Russian services of steamers to the East, which, when carried out, may revolutionize the existing communications. The railway between Vladivostok and Habarofka has already been completed, and the time distance between Vladivostok and central Siberia has been considerably shortened. Meanwhile the Russian marine traffic in the East has increased, and the Russian Government is now consulting with Messrs. Scherveloff & Co. upon the question of inaugurating new steamship services in the Orient. The scheme includes a weekly service of steamers between Vladivostok, Hongkong, and Shanghai, the steamers to call at Nagasaki and Canton.

THE SHIPPING TRADE OF VLADIVOSTOK IN 1897.

In the ten months during which Vladivostok port was kept open in 1897 there entered 242 ships, with a total of 285,603 tons register. Last year the new ice-breaker of exceptional power had not arrived to keep the port open during January and February, but in those months of the present year ships have freely entered and left Vladivostok. The largest number of ships entering sailed under the German flag, the figure being 82, but with the exception of 19 all were under 1,000 tons, and none exceeded 2,000, the total registered tonnage of the German boats being 49,678. The larger boats under the German flag were occupied exclusively between far eastern ports, chiefly Hongkong, Shanghai, Nagasaki, and Vladivostok, one ship making eight trips in the season.

The London and China Telegraph says that the largest tonnage entering Vladivostok under one flag naturally belongs to Russia, and, indeed, almost entirely to the subsidized Government boats of the volunteer fleet. There were 53 entries under the Russian flag, with a total of 97,413 tons register, 29 of these, with a total of 82,073 tons, belonging to the volunteer fleet. Of the latter, 1 ship, the *Kherson*, is registered 4,216 tons, 4 are of 4,000 each, and 2 of 3,600 and 3,326 tons, respectively. The nonofficial Russian shipping was quite insignificant, the tonnage varying from 149 to 713 tons.

The Japanese come third, with 45 ships and a total of 46,944 tons register. Twenty of these ships were of over 1,000 tons, but none exceeded 2,000, while the smallest was 623. In the number of ships Norway holds the fourth place, with 29 ships of 27,819 tons register. Of these 7 were over 1,000 tons. England sent 21 ships of a tonnage of 31,781. Five of these were under 1,000 tons, the smallest being 887. Among the ships sailing under the English flag, one, of 2,997 tons, deserves especial mention. She was chartered nominally by the Russo-Chinese Bank, but actually by the Russian Government, to carry lumber from Portland, Oreg., United States of America, to Vladivostok, and her cargo, including a full deck load, was not less than ten to twelve thousand tons. The lumber was destined for the Manchurian Railway, and was dispatched by rail to the nearest point on the Sungari River. A second cargo of the kind was to be brought by the same boat as soon as the rivers of eastern Siberia were clear of ice. The United States are credited with only 4 ships of 5,153 tons register. Denmark sent 2, Holland and Austria 1 each. The Chinese flag was only represented by 1 ship, of 682 tons, although the greater part of the local trade of Vladivostok is said to be in the hands of Chinamen.

Vladivostok has suddenly leaped into importance as a commercial port, owing to the construction of the Ussuri Railway, or rather to the recent policy of the Government in regard to this line. For a year or two it was practically idle, and commerce continued to take the old route to Nikolaevsk and up the Amur River, which is navigable for a couple of thousand miles from its mouth. Some two years ago the minister of ways and communication, M. Khl'kov, gave exceptionally low rates on the Ussuri Railway for goods from the port of Vladivostok to Nikolskoe, on the Amur River, and apparently the sudden bound into prosperity of this port dates from this wise decision.

THE GREAT ICE-BREAKING STEAMERS OF RUSSIA.

Recent reports from Russia indicate that experiments with a new ice-breaking steamer during the past winter have been eminently successful, and that they give promise of an ability to keep open the ports which have in the past been closed to navigation over five months of the year. This steamer is presumably the one constructed at Newcastle-on-Tyne for the Russian Government in 1898, and described by the Daily Chronicle of that place on the occasion of its launching in October, 1898, as follows:

The vessel is the pioneer ship of what may be termed pelagic ice breakers, and as such will no doubt excite a great deal of interest, especially among shipowners, merchants, and others, the sphere of whose industry lies wholly or partly among waters which are at present rendered impassable by ice in winter. The employment of large ice breakers had been confined to the great lakes of Canada until the direction of the Siberian Railroad ordered a powerful vessel of this class, which is now being erected on the shores of Lake Baikal, in Siberia. It has, however, been left for Admiral Makaroff to draw the attention of the Russian Government to the experience

gained in these inland seas, and to induce him to place an order for an ocean-going vessel larger, heavier, and more powerful than any ice breaker that has yet been built. The work which she is to undertake is much more ambitious than anything that has hitherto been considered practicable, and although it is impossible to predict whether the utmost expectation of the most sanguine adherents to the scheme will be fulfilled, there can be no doubt that the performance of the vessel will throw into the shade anything that has been done by ice-breaking steamers on this side of the world, and will also surpass the best work of the most powerful American ice breakers. In saying this, there is no intention of belittling the excellent work that has been done by existing ice breakers, which have been designed and built to meet conditions somewhat different from those which have guided the designers of the new vessel. It is held by many men of experience in navigation amid frozen waters that there will be no great difficulty in keeping open many, if not all, of the principal trade routes of the world which are at present rendered impassable every winter. The ice-breaking ferry steamers of the Canadian lakes succeed in maintaining practically unbroken connection between their stations through ice 4 feet in thickness, and they are often called upon to face what are actually known as windrows, when the drift ice has been piled up by the effect of the wind to a height of sometimes 20 feet. The greatest thickness of field ice reported by Dr. Nansen is 12 feet, and this was in latitudes where even commercial enterprise has not yet made for itself an outlet, and within the limits to which trade has hitherto been confined no such thickness of ice is to be found.

The dimensions and appearance of the vessel would suggest a battle ship, were it not that the bow is cut away and forms an exceedingly long overhang, which serves the double purpose of breaking the ice with which it comes in contact by concentrating the "vis viva" of the vessel, and of protecting the forward propeller. The earlier ice breakers were designed on the principle of breaking down the ice by what is not unfair to call brute force—that is to say, that the cutaway bow enables the vessel to be run partially up onto the ice, and if the weight thus applied was sufficient to break the ice well and good; if not, the icebreaker went astern until she came off (which, by the way, was not always successfully carried out) and tried again. The principle upon which the new vessel attacks the ice is also brute force, but is augmented by science. The forward propeller, by disturbing the water under the ice, deprives it of its support and then renders it a comparatively easy task for the heavy vessel to break through it.

Turning to the particulars of the vessel herself, the principal dimensions are: Length, 305 feet; breadth, 71 feet, and depth, 42 feet 6 inches. When fully loaded, the draft will be 25 feet and the corresponding displacement about 8,000 tons. The propelling machinery has been divided into four sets, of which three sets are aft, each driving its own propeller, and one set forward. The combined power of these four sets of machinery will be 10,000 horses. There is accommodation for thirty first-class passengers, ten second-class, and fifty third-class passengers, besides that for the captain, officers, engineers, and crew of the vessel. There is ample capacity for cargo, so that the vessel, in addition to conveying merchant vessels through the ice, is herself capable of carrying a heavy cargo. The stern of the ice breaker is cut to form a recess, into which the stern of another vessel can be securely lashed and thus obtain the utmost protection from her powerful consort. Admiral Makaroff has also in view the possibility of augmenting the ice-breaking capabilities of this vessel by having the assistance of a second vessel pushing her, as to which he has already made experiments. The conveying of merchant steamers is, of course, the primary object of the ice-breaking steamer, and it is confidently expected that in a very short time the principal trade routes which depend on Baltic ports will be kept open in winter, and thus provide continuous employment to an enormous section of the community. The ice breaker has so far been considered a powerful commercial influence, but it is impossible for a thoughtful person to consider the field which opens itself before so powerful a vessel without seeing at once what a world-wide influence must be exercised on naval strategy, by the practical demolition of the natural winter defenses of many important places.

The building of the vessel has presented many difficult problems. The hull is divided into no less than forty-eight compartments, each one of which is absolutely water-tight. Water-tight bulkheads are, of course, commonly talked of, but no water-tight bulkheads have been subjected to such severe tests as those in this vessel. Every compartment has been filled with water and put under a pressure due to a column of water extending to the upper deck. In the case of the large compartments, such as the engine and boiler rooms, this represented a very serious operation, as the capacity of each boiler room is nearly 2,000 tons.

[From the Illustrated London News, December 3, 1898.]

The campaign which the *Ermack* (the ice-breaking steamer) is carrying out has emanated from Admiral Makaroff, of the Russian navy, who has for a long time past been making an exhaustive study of the problems connected with pelagic ice breaking, and to the uninitiated appears sufficiently daring. The winter from November until April will be spent in passing up and down the Baltic as far as Kronstadt, and, if needs be, St. Petersburg itself. After the ordinary navigation in these parts is resumed the *Ermack* will go to Archangel and be in time to open that port long before the ice would relax its grip if left undisturbed. When this mission is accomplished it will be time for the *Ermack* to go to the most northerly latitudes of her "sphere of influence," the White and Kara seas. Hitherto a voyage to the famous Yenisei River has been attended with rather more risk than is necessary to make it appeal to the navigators of the world as a desirable cruise, owing to the impossibility of predicting whether the Kara Sea will be free of ice or not; and even if the outward voyage were satisfactorily accomplished, the return is just as perilous to the ordinary cargo steamer. With the *Ermack*, however, these perils vanish, and vessels under her convoy will, it is expected, be able to make three or four voyages every year to the Yenisei in place of the one or two (and that uncertain) that has hitherto been looked upon as the limit of possibility.

[From Success, May 20, 1899.]

With a roar like the bursting of an ice gorge lifted by a spring flood the *Ermack* recently forced her way into the harbor of Kronstadt, Russia, ending an unparalleled journey of 200 miles through solid ice, all of it being at least 5 feet thick, and that for 50 miles about 10 feet in thickness. To the right and left she hurled the huge blocks, as a locomotive plow throws the snow. Thousands of people on skates, on dog sleds, and in large and small sleighs and sledges, raced with her for the last 9 miles of her course, which she passed over in about an hour. As she came grandly into port, bells were ringing from the steeples of the city and of neighboring St.

Petersburg, military salutes were echoing for miles along the frozen shores, and shouts and cheers of welcome were pouring from the throats of an excited crowd of many thousands.

Her arrival on the 17th of March begins a new era in Russian commercial and naval history, and will probably cause the anniversary of that day to be as thoroughly observed in St. Petersburg as in Ireland for the great patron saint.

The vessel is a product of the skill of Armstrong, Mitchell & Co., shipbuilders, of Newcastle, England. She was designed by the Russian Admiral Makaroff, famous for giving one of the first successful demonstrations of the usefulness of torpedo boats in naval conflicts. She is of about 8,000 tons burden, and her engines are of 6,000 horsepower. The secret of her great execution lies in a powerful screw pointing upward and revolving rapidly in a horizontal plane far ahead of the cutwater and under the ice. A moment's reflection will show that while ice is braced sidewise in the firmest manner and is backed strongly against downward pressure by the water below, its resistance to upward pressure is merely the limit of its cracking point. Once cracked, as it is easily by the first swelling of a flood forced under it, it is tossed about wildly by every spring freshet. The upward pressure of the water from the rapidly rotating wheel imitates nature's method and cracks the ice, which is then forced asunder with comparative ease by the huge steel bows of the *Ermack*.

The admiral deserves world-wide honor for this invention, which, like all other great ideas, seems simple enough after it has been seen in operation. But some of our American inventors ought to elaborate the plan until we can navigate the polar seas even when frozen, as their ice is said to be only from 10 to 14 feet thick. They can undoubtedly produce vessels which will make navigation feasible all winter to the ports of Alaska, and make it unnecessary in the future for a whaling vessel, caught in the ice, to remain imprisoned until spring.

RAILWAYS IN RUSSIA.

Consul-General Holloway, in a report to the State Department in 1898, gives the following statement regarding Russian railways:

Railways in Russia are of two categories—imperial and private. The total length of all the Russian lines operated July 1, 1897, were 39,005 versts (25,860 miles), of which 7,593 versts (4,934 miles) were double track.

Of this length the Government operates 23,161 versts (15,356 miles); private companies, 12,182 versts (8,077 miles); Grand Duchy of Finland, 2,244 versts (1,488 miles), and the department of war (Trans-Caspian Railway), 1,418 versts (940 miles).

According to the Journal de St. Pétersbourg, the total length of new Russian railways in course of construction in 1898, as well as those authorized and to be commenced shortly, was 12,228 verstes (8,107.2 miles).

The chief of these lines are Tiflis-Kars, Khavast-Tashkent, Tchaplino-Berdiansk, Grodno-Poharantsy, Perm Viatka-Kotlass, Tikhoretsk-Volga, Pétrovsk-Derbent Balandjary, Moscow-Briansk, Razouvaievka-Syzraue, Vyrypaievka-Simbirsk, Koubino-Arkhangel, Moscow-Savélovo, Moscow-Pavélets, Dankow-Smolensk, Berdithevi-Yanow, Moscow-Stockmanshof, and Tuckum-Windau.

RAILROAD BUSINESS IN RUSSIA IN 1898.

[Consul-General Holloway, in Advance Sheets Consular Reports, May 24, 1899.]

The mileage of Russian railroads was considerably increased during the year 1898. Of the newly constructed roads, the principal are on the trans-Siberian line section from Obi to Krasnoyarsk, 471 miles, and from Taiga to Tomsk, 59 miles. Regular trains have been placed on the line from Vologda to Archangel, 394 miles. The following lines have been opened, viz: The Moscow-Jaroslav-Archangel, the Riazan-Ural, and Moscow-Windau-Rybinsk, in the Moscow region; Lugansk-Millerovo, in the region of the Donetz basin, and Lukov-Lublin, in the Vistula region. The Russian railroads, on January 1, 1899, consisted of twenty-eight connecting lines, of which eighteen are controlled by the Government and ten by private companies, viz:

	Miles.
Baltic and Pskov-Riga	618
Catherininsk	649
Kursk-Kharkov-Sebastopol	982
Libau-Romny	826
Moscow-Brest	684
Moscow-Kursk-Nijni Novgorod	701
Nikolaevsk	604
Perm-Tiumen	823
Poliessk	953
Vistula	820
Riga Orel	785
Samara-Zlatoust	987
St. Petersburg-Warsaw	882
Western Siberian	882
Central Siberian	535
Syzran-Viazma	865
Kharkov-Nikolaev	791
Southwestern	2,433
Warsaw-Vienna	307
Vladi-Caucasian	905
Ivangorod-Dombrovsk	300
Lodz	17
Moscow-Windau-Rybinsk	545
Moscow-Kazan	803
Moscow-Voronezh	1,030
Moscow-Jaroslav-Archangel	1,071
Riazan-Ural	1,797
Southeastern	2,288

The lines not connected with the general system are:

Baskuchank	48
Transcaucasian	694
Transcaspien	958

The local roads are:

Irinovsk	36
First Society of Railroads	217
Sestroretsk	23
Tsarskoe-Selo	17

The total length of the Russian railway lines (with the exception of the Finland railroads, 1,590 miles long, which are controlled by their own directors, officers, and statutes) is 26,797 miles. This summary of the railroads in operation does not give a full idea of the extent of Russian railroad mileage at the beginning of the present year, as a number of lines are in course of construction, which, when completed, will furnish a total of 7,015 miles. On many of the roads under construction, temporary communication was opened last year, and others will be opened in the near future.

The most important line under construction is the Poltava-Kief, which will furnish an outlet for the products coming from a rich and densely populated region to Kief and farther west. The Poltava government is in the rich black-earth belt, the principal occupation of its inhabitants being agriculture. This, it is estimated, will furnish 219,355 tons of freight annually.

It is thought that the projected line from Nijni Novgorod south will carry 129,032 tons the first year, and that its business will increase rapidly.

It is proposed to construct a line from Zemetchina on the Syzran-Viazma Railroad to Kustarevka, to furnish an outlet to an area of 1,445 square miles, with a population of 112,000.

A line will be built from St. Petersburg southward to Kief, which will shorten the route 166 miles.

Measures will be taken to increase the capacity of the Novorossisk branch of the Vladi-Caucasian Railroad by constructing a new line from the Caucasian station to Ekaterinodar, and by laying down a second track from Ekaterinodar to Novorossisk, which is the terminal point for goods exported by the Vladi-Caucasian Railroad. The movement of freight on this line in 1895 amounted to 601,613 tons of grain and 64,355 tons of miscellaneous freight. Now that the Tihoretsk-Tsaritsine line is completed, cargo from the Volga will move on the Novorossisk branch.

In addition to the foregoing several roads will be constructed by the Government, viz: From Vladivostok to Kerch, which will run through a rich mining district; the Volchansk-Kupiansk line, 73 miles, a local road affording an outlet to an area of 1,288 square miles, with a population of 136,000; the Piatihotka-Koristovka line, which will connect the Catherininsk and Kharkov-Nicolaev railroads and will be also of local importance.

A line will be built from Chiatury to Darkveti, four miles long. In order to develop the manganese industry of Transcaucasia, the so-called Chiatury branch of the Transcaucasian Railroad was constructed in 1891, which carried 80,645 tons of manganese during the first year and a total of 193,549 in 1896, showing the development of the manganese industry in that region. But this branch does not meet the requirements, as the mines extend beyond Chiatury, and the line will be extended.

Concessions have been granted to private corporations to build the following lines: From Yalta to Balchisarai, 45 miles; from Novozubkovo to Novgorod-Seversk, 76 miles; from Belgorod to Sumy, 96 miles; from Holm to Belzshetsk, with a branch from Zamostie to Lublin, 119 miles; from Valk to Marienburg, with branches, 129 miles; and three small lines in the manganese region in the Transcaucasus, 26 miles.

The past year was the tenth of the existence of the new tariff regulations published March 8/20, 1889, reducing the passenger rates. The general passenger tariff introduced at the end of 1894 lowered the prices for distances exceeding 106 miles. For shorter distances for third-class passengers the tariff remained unchanged. Later suburban rates were adopted for distances of less than 106 miles, calculated at 1 copeck per mile per third-class passenger. The results of the general lowering of the tariff and the application of the suburban rates proved satisfactory. The number of passengers increased to such an extent that the railroads lost nothing. In view of these favorable conditions the tariff committee has decided to reduce the rates of all passenger tickets to correspond with those charged on the suburban lines.

The passenger department is working on a new rate sheet, which will be published at an early date. A further reduction has been made to emigrants, who have been carried at a reduced rate when traveling together, one ticket being issued to the whole party, which caused great inconvenience to the emigrants and railroad officials. Hereafter, each emigrant will be furnished with a ticket at one-fourth of the ordinary rate. A new tariff has been worked out for direct communication with the ports of the Far East, and this decides an important question concerning Russian commercial relations with distant ports. With the introduction of the new tariff it becomes possible to transport goods to the ports of the Far East from every railroad station of the interior of Russia. A new tariff for transporting Egyptian cotton to Lodz has been made out in connection with the Austrian railroads. Egyptian cotton was formerly billed to the Lodz district through Odessa, and the Russian steamship companies and Russian railroads profited by this traffic. The Austrians coveted this freight, and their railroads made a secret agreement with the steamship companies, reducing their tariff, and Egyptian cotton began to move through Trieste to Lodz.

Under such conditions, Russian steamers and Russian railroads lost business; and as the Austrian railroads could do the same thing with other goods coming to Russia from the ports of Asia Minor, the Russian Government increased the tariff on cotton on the Warsaw-Vienna Railroad and lowered the rate on the Russian steamship

company and the tariff on the Odessa-Lodz Railroad. These measures had the desired results—Austrian railroads came to terms with the Russian roads, and a tariff was established satisfactory to both countries. During the past year an agreement was made with foreign railroads concerning tariffs for kerosene and grain cargo coming from stations of the Russian railroads direct to the interior stations of German and Netherland roads. The interior tariff on sugar and salt and the general cargo tariff have also been reviewed this year. It is proposed to establish one general tariff for all the interior railroads, but this will not be done until next year. Owing to the failure of crops this year in some of the governments a special tariff was established for the transportation of seed grain and cattle to the famished districts.

Last year a project for reorganizing the ministry of ways and communications was presented to the Government for consideration and is nearing its solution.

PROPOSED RAILWAY LINE CONNECTING RUSSIA WITH THE PERSIAN GULF.

[New York Sun, April 30, 1899.]

There is nothing unlikely in the report that Russia has acquired the port of Bender Abbas, on the northern side of the entrance to the Persian Gulf, or the right to occupy it under certain prearranged conditions. So far back as 1889 it was known in London that Russia was treating with Persia for the exclusive right of navigation on the rivers flowing into the Caspian and of the construction of railways throughout Persia. In connection with the latter privilege there was mentioned at the time the right to build a line from Askabad or some other point on the Transcaspian Railway by way of Meshed, Jumain, Birjand, and Kirman to Bender Abbas. It is possible that the construction of the railway from Merv to Kushkh, on the Afghan frontier, with the intention of extending it to Herat later on, may in some degree modify this programme, and that instead of bringing the line from Askabad to Birjand via Meshed and Jumain, this last-named place may be connected with Kushkh and Herat by a much shorter route, which would then follow the original tracing through Kirman to Bender Abbas.

The advantages of this latter route would be very great, as it would bring the more populous and cultivated parts of Russian Turkestan and western Afghanistan into direct communication with the sea by the shortest and most feasible road. Leaving altogether out of consideration the military aspects of the question, the commercial advantages of such a railway to the coast of the Persian Gulf are enormous. A great stimulus would be given to production, which would engage the energies now wasted in isolated barbarism, and do more to assure the peace of those parts of Asia than anything else. According to news recently received in India the continuation of the Transcaspian line from Samarkand to Tashkend and Andijan toward the Chinese frontier has been in a workable condition since the beginning of January, but only by the aid of a temporary wooden bridge over the Syr Daria, the ancient Jaxartes. This wooden structure has lately been replaced by an iron bridge costing over half a million of dollars, which was opened with great ceremony.

Although undoubtedly the primary objects of this prosecution by Russia of railway construction into the heart of Central Asia are political and military, it is laying the foundation of a solid civilization whose needs will create fresh markets for the industry of other countries, in which the United States is bound to have its share.

[From the Zurich (Switzerland) Post.]

A Russian expedition, consisting of 7 officers of the general staff and 14 engineers, has reached from Kars, on its way to the Persian Gulf, the Little Sab, east of Mossul and northwest of Bagdad, on Persian territory.

The task committed to the Russian expedition is to prepare, with the authorization of the Shah of Persia, a continuation of the railway line Tiflis-Kars along the Turkish-Persian frontier down to the Persian Gulf. The railway is to be constructed by [from ?] Russia, and the building is to be commenced forthwith. Simultaneously a number of stations are to be erected for the purpose of protecting the projected railway.

[From the New York Sun, May 10, 1899.]

With regard to the Russian railways in central Asia, the Anglo-Indian papers are inclined to be pessimistic. The Times of India says that the British Government "can not regard with indifference the impending extension of Russian influence in Persia." The Pioneer, of Allahabad, the organ of the forward party, goes further and insists that the time has come "for England to declare the limits of her endurance," and that she should demand "her share of territory on the breaking up of the Turkish, Persian, Chinese, and Siamese empires. That share to be, 'first Egypt and then Arabia south of latitude 30°; then Persia south of a line drawn from a point north of Bushire to the northern point of the Afghan-Persian frontier; Thibet; the river basin of the Yangtze, and

Siam." And Mr. Maclean, formerly of India and now a member of the British Parliament, proposes that the Indian railways should be pushed through Afghanistan to meet the Russian roads.

To this the *Novoe Vremya*, of St. Petersburg, replies that a considerable time must elapse before this scheme can be realized, and shows that its postponement will not be to the disadvantage of Russia. It also says:

Our railway system in central Asia is being developed with objects in which the advantages of commercial transit play but a secondary part. The political situation renders it more desirable for us to see Afghanistan without means of communication, and able therefore to repel the British with vigor, than to see it furrowed with railways and thus opened to the operation of large military forces organized on the European system.

What the Russian Government aims at now, according to the latest and most trustworthy information on the subject, is to establish direct connection between its European railway system at Orenburg, on the river Ural, and the central Asian road at Tashkent. The distance is about 1,000 miles, and the line, when completed, would be, next to the trans-Siberian railway, the most important strategically of the Russian railways in Asia. It will be seen on glancing at the map that, with the distance between Orenburg and Tashkent filled in, there would be an almost continuous straight line of communication between St. Petersburg and Tashkent. The political and military significance of this is at once apparent.

EXTENSION OF RUSSIAN INFLUENCE TOWARD CHINESE TURKESTAN.

[From the New York Sun, May 25, 1899.]

Simultaneously with the announcement that a Russian exploring expedition has left St. Petersburg for central Asia, there comes the news that the governor of Kashgar, in Chinese Turkestan, has applied to Peking for a reenforcement of 15,000 troops. The exploration party is under the command of Lieutenant Kosloff and will make its way through western Mongolia and the Gobi desert, and, crossing the Nan-Shan Mountains to Lake Kukuror, pass into the region of the sources of the Hoangho. It is expected that the work to be done by the expedition will occupy about two years, and be the prelude to important action in that little-known part of Asia.

The anxiety manifested by the Chinese governor of Kashgar is not, however, occasioned by Lieutenant Kosloff's expedition, but by the military movements of the Russians in his immediate vicinity and in the southern part of his province. The recently reported reenforcement of the Russian garrison on the Murghab and the occupation of points in the Sarikul district on the eastern slopes of the Taghdumbash Pamir toward Tashkurgan, to the southwest of Yarkand, have no doubt alarmed the Chinese authorities and led to the request for more troops. The proximity of the head of the Transcaspian railway extension at Andijan, some 250 miles from Kashgar by a well-traveled road, taken in connection with the numbers of the Russian troops that are quartered along the line of rail between Samarkand and Andijan, also gives them cause of apprehension. In addition to local levies, the Russian regular force in that part of Asia comprises four battalions of riflemen, fourteen of ordinary infantry, nine batteries of artillery of eight guns each, fourteen sotnias of Cossacks and some companies of engineers, and a battalion of garrison artillery. Behind these, between Samarkand and the Caspian, there are said to be twelve battalions of infantry, twelve sotnias of Cossacks, a battery of artillery, and other troops, with power to draw on the garrisons in the Caucasus in case of need.

The interpretation to be put on the various reports coming from that part of the world at intervals would appear to be that Russia is moving steadily forward by means of her railway and military outposts into Chinese Turkestan. The trade of Yarkand and Kashgar that now finds its way to India through Kashmir will, in a brief period, be diverted to the far easier route to the Russian railhead, and the present caravan trade over the high passes of the Himalayas will gradually be extinguished.

Russian policy is undoubtedly to cause the populations of that part of Asia to look to Russia as the dominating power in all those regions north of the great plateau of Thibet in which the Yangtze Kiang, now definitely recognized as within the British sphere of action, takes its rise. What may be the value of the vast territory between the present frontier of Siberia and Thibet no one knows as yet, and it must be many years before its resources, whatever they are, can be opened up. What is essential in the matter is that, through the agreement between England and Russia, the development of it will be of a peaceful character and by means of the civilizing influence of the iron rail.

Chinese authority in western Mongolia and Turkestan will not long survive the corrosive influence of the steam engine and Russian enterprise, and the mysterious and once populous regions that poured their hordes into Europe will receive back in European civilization the means of rendering them again fit for human habitation.

RUSSIAN RAILWAY TO THE ARCTIC SEA.

[British Board of Trade Journal, March, 1898.]

The first railroad running to a port of the Arctic Sea is the continuation of the Vologda Railway, in Russia, which is now finished to the port of Archangel, on the southeastern corner of the White Sea, and at the mouth of the river Dvina. The Engineering and Mining Journal states that this new line, which was opened some weeks ago, is nearly 400 miles in length. The Vologda-Archangel Railway passes for the most part through deserted or sparsely populated regions or across "tundras" and marshes which are sometimes 50 feet in depth. The whole nature of the country through which the new line passes was unfavorable to its construction. Marshes and patches of bog and swamp had to be filled in; the newly made embankments were continually giving way and had again to be built up until the necessary stability had been obtained. Six iron bridges and numerous bridges of wood were required. The wooden bridges are built upon piles driven in some cases to a great depth beneath the surface. The new line is of military as well as commercial importance, for it must play a leading part in the opening of the northern provinces of Russia. It will furnish an outlet, for instance, for the deposits of petroleum which exist in northern Russia, but have not been worked on account of the lack of transportation.

NEW HARBOR IN THE WHITE SEA.

[British Board of Trade Journal, April, 1898.]

The Russian Government has decided to establish a new naval harbor in Katherine Gulf, the northwestern arm of the White Sea. The Manufacturer reports that on 13th July next the minister of marine will be present at the laying of the first stone of the harbor works. Owing to the vicinity of the Gulf Stream the waters of the Katherine Gulf do not freeze, except during the severest winters. For many years Russia has been anxious to obtain a port from Norway, but it is understood that the Norwegian Government has now definitely refused to grant her a base on any part of its extended coast line. The railway from Petrozavodsk to the White Sea will be finished in about five years.

THE TRANS-SIBERIAN RAILROAD AND ITS RELATION TO THE UNITED STATES.

[United States Consul Monaghan in Consular Reports, 1897.]

An event hardly less important than the cutting of the Suez Canal will be the building of the Trans-Siberian Railroad by Russia. Germany looks longingly forward to the time when fast trains are to run from Calais to Vladivostok. Five thousand miles of steel rails have been laid already at a cost of 350,000,000 rubles. July 1, 1904, it is thought, will see iron horses running from the shores of the north to those of the Japan Sea. In 1898 trains are to run over the Siberian road to the Amur River. Thence, by fast steamer, passengers, post parcels, and freight are to be pushed on to Chaborowka; thence, in eighteen hours, over the south Russian section of the Siberian road to Vladivostok, making the distance from London to the most important harbor of the Japan Sea seventeen and a half days. Many of the wares that go and come by boat now will find their way overland on these lines. Before 1901 Russia will have cut her way with steel rails across Manchuria, saving 300 miles. It is estimated by German engineers that when the road is repaired, after the first few years, and high rates of speed across Siberia are attained, the entire trip will be made in nine days and two hours.

The Anglo-Indo-Australian post bags weighed, in 1883 (the only year for which one finds figures), 842,448 kilograms. Last year England paid France and Italy for transporting the weekly post bags 1,400,000 marks (\$333,200), at the rate of 2 francs per kilogram of letters and 25 centimes per kilogram of printed matter. Assuming that 650,000 kilograms were letters and 1,600,000 kilograms packages and printed matter, its importance to this Empire will be apparent. The sphere of influence, apart from political or diplomatic interests, over which the great road is to extend lies east of the eightieth meridian east of Greenwich. It takes in all Japan, China, Australia, Annam, Siam, etc. If only half as much postal matter passes over the new line in 1901 as went via Suez in 1895, Germany will have to get 680,000 marks (\$161,040) for transporting 325,000 kilograms of letters and 800,000 kilograms of printed matter and packages.

To no one does time mean more or so much as to a traveler to and from the East; 90 per cent of the passengers will prefer to make the journey in nine to ten or twelve days overland to making it, as now, over seas

in twenty-eight to thirty-eight days. This, too, when tickets from Warsaw to Vladivostok are to cost only 120 rubles, first class. From London to Warsaw costs now 150 marks (\$45.70). Thus, the entire ticket (London to Vladivostok) is to cost about 500 marks (\$119), first class. Of course, second class is to cost considerably less; how much is now not known. A ticket to Japan to-day, via Brindisi and the Suez, costs 1,800 marks (\$428). If to the price of overland ticket the price of sleeping berth for twelve nights is added, there is even then a saving of \$166 to \$190 against the price now paid via Suez.

In 1895, 216,938 passengers went by the Suez Canal to China and Australia. For political, military, and other reasons drop 117,000 from the list of possible passengers from the Russian route, and there remain 98,229. Take from these 18,299 pilgrims, and 80,000 remain. Take of these 40,000 who are East Indian travelers, and there remain 40,000 plus 10,000 who hitherto have gone via the American transcontinental lines, plus another 10,000 West Europeans who go annually to the East on business or pleasure, etc., and we get 60,000, mostly first-class passengers, using the new route. These must cross Germany from its western frontier to Alexandrowa, on the Russian border. Sixty thousand multiplied by 100 marks (from Aix la Chapelle to Alexandrowa costs now 92 marks) equals 6,000,000 marks (\$1,428,000). The goods going over the road to the east and those coming west will be, naturally, those that can pay the biggest rates—furs, gold, silver, platinum, and tea. Many of these are to come to Europe out of Siberia itself. That land is rich in minerals of all kinds; the Urals are giving out gold and silver in large quantities. How important to Germany are the furs of Siberia may be learned at Leipzig's annual fairs. If the hammer that sent home the first spike in the first sleeper laid was silver, the one that sends home the last spike should be gold. Much as the road may mean to Germany, Russia, and the rest of Europe, it may mean more to us. California, Oregon, Washington, our whole western country, if not our whole continent, is interested in this road. Russia has her hands full at home. The hands to help in the East are ours.

There is something more attractive in our civilization and methods to Eastern people than in those of Europe; at least, this is asserted by Eastern travelers. To develop the resources of an empire so vast as Russia will require capital, enterprise, and energy such as has made us the richest nation in the world. To equip her roads, to develop her great agricultural, fishing, mineral, and forest resources, Russia needs just such implements as have helped us. No time is to be lost if we are to have any part in the great drama that has for its plot the development and modernizing of the Orient.

BUSINESS ON THE SIBERIAN RAILWAY.

[From the New York Journal of Commerce, May 20, 1899.]

The business of the Siberian railroad is increasing rapidly, though to what extent commercial traffic justifies it, apart from military reasons, it is impossible to say without a fuller statement of earnings and expenses and fixed charges. On the western and central sections together, the number of passengers carried increased from 175,000 in 1896 to 650,000 in 1898, and the freight from 207,878 short tons to 738,296 short tons last year, which is certainly a great growth in two years. These figures do not include 400,000 emigrants and their belongings carried by the western section. Of 490,000 tons carried by the western section in 1898, 320,000 tons were cereals. The Steppe regions touched by the western section had to import a hundred thousand tons of grain annually five years ago; now they export 70,000 tons. A traffic of 1,700,000 tons per annum is predicted for the trans-Siberian road within five years, on the assumption that within that time the road will reach the Pacific Ocean, and constitute at the same time a transcontinental route and a route from eastern Siberia to the ocean.

Consul-General Holloway sends from St. Petersburg, April 7, 1899, an extract from a Russian paper, giving the following figures of traffic in the last three years:

YEAR.	PASSENGERS.		GOODS.	
	Western section.	Central section.	Western section.	Central section.
1896.....	160,000	15,000	<i>Pounds.</i> 379,176,000	<i>Pounds.</i> 36,581,000
1897.....	236,000	177,000	765,213,000	194,752,000
1898.....	350,000	300,000	1,083,360,000	393,232,000

The article continues:

With the opening of the through traffic to the Pacific, the extension of the road as a carrying agent must be enormous. It is proposed to spend over \$40,000,000 in developing traffic during the next few years. Heavier rails and side tracks are to be laid and 1,429 bridges reconstructed. The average speed of trains is now 20 versts (13.26 miles) an hour for passenger and 12 versts (7.956

miles) an hour for goods traffic. When the reorganization is complete it will be possible to run trains at 50 versts (33.15 miles) an hour, which would enable them to travel from Moscow to Vladivostok in ten days. The distance separating the Atlantic from the Pacific could then be traveled in considerably less than a fortnight.

IMPROVED FACILITIES TO BE PROVIDED.

Russia has recently shown signs of considerable activity and enterprise in the matter of railway construction, but that the country is still behind the times, though ready for improvement, is shown by a recent official publication. In connection with the announcement that the Russian Government proposes to spend \$40,000,000 during the next few years in the development of traffic over the great Siberian railway, it is stated that heavier rails are to be laid, side tracks constructed, and 1,429 bridges rebuilt. These extensive improvements are to be undertaken because it has been determined to increase the speed of passenger trains from 13 miles to an average of 33 miles an hour. That a very large sum should be required in order to put the line in condition to bear the strain of trains passing at a rate of speed which in the United States is by no means considered great, shows that the Russians have not in the past exercised a very farsighted policy. The great increase in the weight of locomotives within the last dozen years has compelled many railroads in this country to strengthen their bridges, but important American lines always keep their roadbeds in shape for the rapid movement of trains.

SIBERIAN DEVELOPMENT, BY NEW LAND, WATER, AND RAIL TRANSPORTATION ROUTES.

[Bulletin de la Société Géographique Commerciale.]

Until very recently Siberia, so long unknown, has had an entirely artificial existence. The Russians themselves were almost as ignorant of its resources as the outside world, and regarded it merely as a country of transit; they knew that goods from the far East, especially teas, passed through it, meeting on the way some few European products, and, above all, long trains of convicts and exiles. The work on the great Trans-Siberian Railway has been the first germ of the economic development of the country. Hitherto Siberia has been inhabited only along the caravan route; a few miles on either side not the slightest trace of settlements or of cultivation could be found.

The caravan route extends from Mongolia to the Ural, with branch roads to the Amur, Lena, and Altaï. This road, like almost all others in Russia, has been made by the travel for centuries of men and animals; it is only a few years ago that the Government thought of keeping it in repair. Since then villages have sprung up along the route, partly due to individual and partly to Government initiative.

The railway doubtless has affected this business of overland transport; but it is far from having injured it fatally, as the long files of wagons and sleighs, loaded with merchandise, passing parallel to the iron road attest. There are two reasons for this—the high tariff of the railway, together with its still primitive organization, and the necessity for the peasants to find employment for their horses, especially during the long winter months.

The rivers afford the least expensive means of transportation, since boats have been forced by competition to lower their tariff. Unfortunately, the great Siberian rivers (except the Amur) flow from south to north. It has been proposed to unite them laterally by means of canals. The canal from the Ob to the Yenisei, not yet completed, follows the Kiète, a tributary of the Ob, for about 310 miles, then crosses a great lake, and by means of a cut nearly 5 miles in length joins a tributary of the Yenisei. This last river is reached about 155 miles north of Yenisséisk. When the innumerable rapids of the river Angara have been made navigable, the journey from Oust Kiakhtha, on the Mongolian frontier, to Tioumen, at the foot of the Ural, a distance of 3,604 miles, will be made by way of the Sélenga, the largest tributary of Lake Baïkal, the lake itself, the Angara River, which unites the lake with the Yenisei, the Ob Canal, the Ob River, and lastly the River Irtych.

The third means of transportation is the railway. It was not projected for the development of Siberia, but to seek on the Chinese coast a port free from ice, which nature has refused to the Baltic Sea. This railway is actually finished as far as Tomsk. The first express left St. Petersburg the 1st of April, 1898, composed of eight cars (sleeping, parlor, and dining cars), lighted by electricity and heated by steam. Trains are expected to make the distance, 1,939 miles, in six days. Singularly enough, this railway, which was not considered a commercial enterprise, has proved of great benefit to trade. Except troops and criminals, it was feared that there would be few passengers; the truth is that the number of trains might be doubled or tripled, as thousands of tons of merchandise are waiting for transportation. The road to Krasnoiarsk, the easiest of construction, is the most useful from a commercial point of view. In consequence of the development of traffic, the Russian Government has established a custom-house at Irkutsk, through which the teas and silks from the far East must pass.

Cereals grow abundantly in Siberia, and this trade is in the hands of the English and is carried on chiefly by the great rivers and the Arctic Ocean. Russia protects herself against Siberian grain by heavy railroad freight rates.

Frozen meat is sent to St. Petersburg; wools, tallow, butter, sheepskins, leather, and furs are also exported. Valuable furs are not found, however, in the radius of the railway.

The mineral productions include salt, gold, iron ore, coal, and plumbago. Copper and other metals are mined on a very small scale. Iron and coal are found everywhere; gold is also so universal that it might be called a Siberian specialty. In the basin of the Lena, and in all of the northeastern part of Siberia, there are said to be beds so rich that they might rival those of Alaska. Salt is unequally distributed; it abounds in western Siberia. In the district of Akmolinsk, on an average seven or eight out of every ten borings yield salt water.

The commercial relations of Europe with Siberia are capable of great expansion. It is a country where time has no value and whose people have no expensive tastes. The provinces of the Amur and of the seacoast are considered by Russia of great importance. They have been colonized officially, at great expense; and for a long time all foreigners, unless naturalized, were forbidden the acquisition of real estate. Recently, these regulations have been changed; the doors of this colony are open, and the influx of foreign capital is favored. All the trans-Baikal region and the basins of the Amur and Lena are free from duty. Sugar, tobacco, wine, and alcohol alone pay duty at Vladivostok or Nicolaevsk. To gain this market, we should send representatives to study conditions, and a direct line of steamers should be established. Up to the present time the Germans, Americans, and English alone have profited by this market.

A RUSSIAN VIEW OF THE TRANS-SIBERIAN RAILWAY AND ITS PROSPECTIVE EFFECTS ON COMMERCE AND INDUSTRY.

The Journal de St. Pétersbourg deals with the trans-Siberian railway both from a commercial and an economic point of view. From a commercial point of view the enterprise will, in the opinion of the Journal, be at first of little advantage, but as regards the development of the national wealth it is likely to be extremely fruitful in results.

The trans-Siberian railway will cost the State 300,000,000 rubles, while the revenues derived from it will be for some length of time quite insignificant. Dealing with the question as to the commodities on which the venture will depend, it is observed that the agricultural products of Siberia represent an annual value of 41,000,000 rubles, to which should be added the 25,000,000 produced by the gold mines and other metallurgical undertakings. There are also fur products. All this, however, is very little when compared with a capital outlay of 300,000,000 rubles. A large traffic in third-class passengers may be depended upon, although at reduced prices; but the carriage of passengers will give but little revenue. It must therefore be understood that for many years the enterprise will not yield interest, and that the capital sunk must be regarded in the light of a sacrifice made by the State.

This is the outlook commercially, but in the complicated machinery of the State, the commercial and economic interests do not always coincide. The most advantageous lines, from a commercial point of view, are perhaps those which connect the Volga with the Prussian seaports; the economic advantage of these lines is, however, doubtful. The Siberian line, apparently of so little immediate advantage from a commercial point of view, has, on the other hand, a very great economic importance; it might be said to be greater than that of any other railway in the Empire.

To the treasury the question presents itself as follows: While for a long time few direct benefits will be derived from the 300,000,000 rubles employed on this work, the State will indirectly benefit, as a result of the railway, from an increase of revenue in other directions. Thus, a million households of ruined peasants, who, being established in the governments of Tchernigow, Penza, Poltava, etc., can only impoverish the country, will be able, by migrating, to become a source of revenue to the treasury. The peasants remaining at home will be able, on the departure of the others, to add to their plots of land and to more easily pay their way.

The gold mines of Siberia are another instance in support of this theory. In the absence of ways of communication, the maintenance of the workmen in the mines is very costly, and this is prejudicial to the efficient working of these mines. This results in a great loss in the annual extraction of the precious metal. The trans-Siberian railway will be able to change all that, and to improve this important branch of mining industry.

Instances might be multiplied to show the indirect advantages to be expected from the Siberian railway. Without the advance of 300,000,000 rubles the State receipts would have a smaller development. In reality this money would be returned more quickly than in commercial enterprises reputed to be advantageous.

Casting a glance at the map of the trans-Uralian region it will be seen that it has an immense area of 11,000,000 square versts (square verst = 0.44 of a square mile), which is twice as great as that of European Russia. Not reckoning the sterile districts in the north and the sandy steppes of the south we get 600,000,000 deciatines of land (deciatine = 2.7 acres) suitable for agriculture or covered with forests. This is an area which compares with and is greater than that of Russia in Europe, representing only 440,000,000 deciatines. These almost boundless

territories of Siberia are occupied at the present time by 4,500,000 inhabitants, which gives an average of one inhabitant per 133 deciatines. On the European side of the Oural the proportion is one inhabitant per five deciatines.

It may be gathered from these figures what a vast field for colonization is offered by Siberia. At this moment a family of five members has on an average at its disposal an area of 665 deciatines—a large extent, and one quite beyond the capabilities of a single family to cultivate. This only refers to regions adapted for cultivation, such as those situated in the area comprised between the governments of Kharson and Archangel. Let it be supposed that the railway increases the Siberian population from the Ural and Semirétchié to Ussuri by 2,000,000 families; estimating the productive force of a family at only 300 rubles per year, this will give an increased revenue to the State amounting to 600,000,000 rubles. It is, as it were, the interest on capital newly raised, of which the annual interest alone exceeds double the entire capital expended for the construction of the railway.

In the above estimates of the anticipated advantages of the trans-Siberian railway no account has been taken of the impetus that will be given by the construction of this line to Siberian industry by the increase of the population, nor of the advantages from a commercial point of view that will be derived by the development of Kiakhta and Irkoutsk, and the increased importance of Vladivostok.

BELGIAN VIEW OF THE TRANS-SIBERIAN RAILWAY.

[From report by Belgian State Railway agent at London.]

In recent years, the object of the great transportation companies has been to reduce the necessary time required to cross the Atlantic, which separates England from America, to traverse the New World from east to west in the least possible time, and to join America to China and Japan by means of rapid navigation across the Pacific.

The exposition at Chicago was the occasion for the American railways to attain the maximum of speed, certain trains having accomplished a mile in thirty-two seconds.

One recalls to mind also the feats of the great navigation companies in their competition for Anglo-American traffic, and the swift passages of the *Campania* and *Lucania* of the Cunard Steamship Company, those magnificent steamers which were able to reduce the passage between New York and Queenstown to five days ten hours and forty-seven minutes.

But these triumphs have not left the Old World indifferent. From the Côté de la Manche, the Pas-de-Calais, and the North Sea the competition for the Anglo-Continental traffic has become more intense. Efforts have been made by the Belgian Government to influence, by means of the Dover-Ostend line, the enormous travel between England and the Continent. Within a few years the Belgian Government has completely transformed its channel service; splendid packets have been put in commission, some of which are among the fastest boats in the world. The vessels easily make the crossing from Dover to Ostend in three hours. The latter city has become the head of the great international express lines, putting London in rapid communication with European cities, the Orient, and Egypt by means of trains de luxe running without change from Ostend to Constantza (for Constantinople), from Ostend to Trieste (for Alexandria), and from Ostend to Wirballen (for St. Petersburg). Thanks to the last train, called the "Nord Express," the distance between London and St. Petersburg can be covered in fifty-two hours.

The construction of the Trans-Siberian Railway is expected to materially increase the importance of the Nord Express. The total length of the Trans-Siberian is 4,547 miles—from Tscheljabinsk to Vladivostok, on the Sea of Japan. It will be the most extensive railway in existence.

More than a third of this gigantic enterprise is now completed. During the year 1895, 918 miles were constructed. At the same rate of progress the line will be finished within two or three years. Several branch lines are to be constructed later; that from Kiakhta to Peking will have a length of from 600 to 700 miles.

A train traveling at the rate of speed of the Pullman service between New York and Chicago would be able to make the journey between St. Petersburg and Peking in five days—that is to say, it will be possible to reach Peking from London in eight or nine days instead of thirty, the time required to cross the Atlantic, America, and the Pacific.

While waiting for the raising of the capital to construct this branch, work will be continued on the line across Manchuria from Nerchinsk to Vladivostok. The latter is separated from Nagasaki, Japan, by 600 nautical miles, and from Vassaunga (near Shanghai) by 1,000 miles.

With a speed of only 35 versts (23.2 miles) per hour, travelers who leave London may reach Japan in sixteen days and China in seventeen days.

The new railway will put Europe in communication with a population estimated to be in the neighborhood of 450,000,000 souls (comprising China, Japan, and Korea)—about a third of the population of the globe.

A GERMAN VIEW OF TRADE OPENINGS IN SIBERIA.

[British Board of Trade Journal.]

Germany is looking to Siberia for food products. As the railroad across the Russian Empire to Vladivostok nears completion interest in its importance grows. With its completion it may be that the world's ways of supplying Europe with food and raw products will change. It is to open up the vast East as it was never opened to trade. It is to make Siberia the competitor of Bulgaria, Austria, the United States, and all South America in supplying corn and cattle, gold and silver. The steppes and wastes of what was once deemed a cheerless desert are to blossom with harvests whose richness may not now be measured. Siberia alone is as large as all Europe. Over its plains roam countless herds of cattle, and in its hills are hidden huge quantities of all kinds of minerals—coal, iron, and gold.

According to a report of Mr. Monaghan, United States consul at Chemnitz, editors of leading papers are putting the German people on guard. They want them to wake up and work hard to get the advantage. They urge the folly of waiting till others have gone in and gathered the best places. They point out the Empire's losses because she began her colonial policy too late. This is cited as an eloquent illustration of what a stupid conservatism and hesitating policy brings. They urge the sending of an able consul to Vladivostok to represent and look after German interests. The city is to be the terminus of this great transcontinental line. It is to be the great commercial port of that part of the world. It is urged that a consul be sent who has the capacity to examine and compare—a man who can and will give all his time for the good of his own country. They do not want a merchant living in Vladivostok to be made consul, for his time, they argue, will be too much taken up with his own affairs. "We want someone," they say, "who will go over all the ground carefully, study it in detail, reporting to the home Government as often as he finds anything worth telling. The consul should be a man of affairs. It will not do to send a man who has had no experience. On the contrary, the ablest man in the service is the one to send. The task before him is one that will give him work all the time for all his faculties. Nor must our merchants depend on Government initiative or effort alone. They must make efforts, and, if necessary in the beginning, some sacrifices. A regular line of steamers should ply between Vladivostok and Hamburg, Bremen, or Stettin. The Americans do it. They sell now almost all the manufactured and colonial articles handled in Vladivostok. England's commercial agents have gone out to Siberian cities; so, too, have the commercial pioneers of Belgium and France. It is time for Germany to take action, if she is to get a firm footing in those places. The imperial consul should show the way, but the merchants must spur the State on to new efforts. This is the only way to win, especially against competitors like England and the United States. The population of Siberia is growing rapidly. Not only will that vast empire send out immeasurable food products, minerals, etc., but it must buy. These are the facts to be forced home. Her food products and raw materials will be cheap—so cheap as to shut out all other competitors. If we get in, we win new and vast markets for our rapidly extending industries and bring back those cheap foods, minerals, etc. If we ever had good reasons to work hard to win new markets, we have some here. Not an hour is to be lost. The sooner the Empire has its consul to work the better. The feast is for those who come first. The roads run from the West to the far East. Its importance is so great that only guesswork or the gift of prophecy can measure it." Such and similar arguments, Mr. Monaghan goes on to say, appear in the leading articles of papers whose every effort is being made to push Germany out into the world's markets. Russia's relations with the States have been always friendly. Her needs now are and for a long time will be such as no nation can or ought to be able to supply better and cheaper than American manufacturers. It might pay to have a consul at Vladivostok and agents in every Siberian city. Now that the road is almost built, it is time, as the Germans say, to look the field over carefully. The United States has a good start. It would be bad management to lose it. Russia resembles America in very many ways. Siberia's steppes are analogous to American plains, the Urals to American mountains. Vast rivers drain its plains, while forests of oak, pine, beech, and birch extend over vast tracts of territory. What is needed in the States to work farms, rivers, forests, orchards, and fields they need now, or will need. If Americans give them as good or better than others, as cheap or cheaper, the lion's share of trade must go to the States. The warning given should have a hearing among merchants and manufacturers.

FRENCH COMMERCIAL ACTIVITY IN SIBERIA.

According to the London and China Telegraph, a Siberian paper says that a syndicate of French financiers has been formed to start Franco-Russian factories in various parts of Asiatic Russia. The first will be opened at Vladivostok, and among its aims are the following: The exploitation of Siberian timber forests; the erection of hotels, on the French model, in six of the chief towns of the Russian far East, including Port Arthur, and at various points along the Great Siberian Railway; and the construction of a factory for the making of high explosives for mining purposes in one of the central towns of Eastern Siberia. A syndicate has also been formed

to arrange for steamship traffic on the rivers, and for the coasting trade of the Amur and the maritime territories. A Franco-Russian company, the "Nord Maritime," says the same paper, has undertaken to connect both ends of the Great Siberian Railway by sea with Dunkirk.

GERMAN TRADE IN EAST SIBERIA.

The Germans have, for some time past, been aware of the field for commercial exploitation offered by Eastern Siberia since the construction of the Ussuri Railroad and the adoption of the ice-breakers, which enable steamers of the largest size to enter Vladivostok throughout the whole of the winter season. The London and China Telegraph reports that, with the sanction of the Imperial Government, a German Siberian company for trade and navigation has been formed at Hamburg, one of the principal objects of which is the "development of commercial relations between Germany and the Amur River district." Khabarovka, the terminus of the Ussuri Valley Railroad from Vladivostok, admirably situated at the confluence of the Amur and Ussuri rivers, has been selected as the headquarters of the German company for the exploitation of the Amur district. Here an establishment controlling a series of agencies has been opened, where samples and collections of German goods will be stored and exhibited, such as have been found in demand and are suited for exchange against the raw products of Eastern Siberia.

It should be noted that Germany is already first and foremost among the maritime trading states doing business with the Ussuri Valley district throughout Vladivostok. German shipping stands at the head of the list entering Vladivostok last year with a total tonnage of 49,000. The growing commercial interests of the Germans in this region, combined with their determination to exploit the district of the Amur, is sufficient to account for the visit of Prince Henry of Prussia to Vladivostok, and the otherwise uninteresting town of Khabarovka, on the great waterway of Eastern Siberia.

THE OPENING UP OF SIBERIA.

[From British Board of Trade Journal, June, 1898.]

Under the name Siberia, in the most widely accepted meaning of the word, are understood all Russia's Asiatic possessions, with the exception of trans-Caucasia, the trans-Caspian territory, and the Turkestan governor-generalship. Thus, Siberia is composed of the following parts:

1. Two governments of the basin of the river Obi, namely, Tobolsk and Tomsk, forming the so-called western Siberia.

2. Two governments of the basin of the Yenisei, namely, Yenisseisk and Irkutsk, forming the so called eastern Siberia, in the strict sense of the term, and entering into the composition of the East Siberian governor-generalship.

3. The Yakutsk region, constituting in respect to administration the Yakutsk territory alone. This, the most vast of all the Siberian territories, occupies the immense basin of the Lena and the less considerable basins of the smaller rivers—for example, the Yana, Indighirka, and Kolyma, falling into the Arctic Ocean. The Yakutsk territory in administrative respects forms a part of the East Siberian governor-generalship.

4. The Amur and Littoral region. This consists of three territories, constituting the Amur governor-generalship, namely, trans-Baikalia, the Amur, and the Littoral. These territories cover the whole of the Russian part of the basin of the Amur and the whole coast zone belonging to the basin of the Pacific, or rather of the Japan, Okhotsk, and Bering seas, including the vast peninsula of Kamchatka and the island of Sakhalin.

5. The Steppe Kirghiz region, which consists of three territories, comprised in the Steppe governor-generalship, namely, those of Akmolinsk, Semipalatinsk, and Semirechensk, in former times known under the collective name of the Khirgiz-Kaissak Hordes and Steppes. Composed as above, Siberia occupies the immense area of 250,000 square geographical miles, being twenty-five times greater than Germany and two and a half times greater than European Russia.

In a report on Siberia published in the Manufacturer, from which the above is taken, it is stated that the enormous expenditure of 350,000,000 rubles entailed by the construction of the great Siberian railway, which probably for a long time will not prove remunerative in the strict sense of the word, is explained by those numerous advantages not subject to arithmetical computation, which may be attained by the Government by the realization of this grand enterprise. The principal barrier to the development of culture in Siberia has hitherto been the absence of regular communication on the one hand between the most important administrative and industrial centers of Siberia, and on the other hand between Siberia and European Russia. Consequently, when this principal obstacle is removed, the causes will disappear which have for such a long time retarded the regular peopling of this extensive and richly endowed region and the rise in the culture of the aborigines and settlers.

The chief mineral riches of Siberia include, among metals, gold, silver, copper, and iron. There are also large and valuable deposits of mercury and tin ores. Among the carboniferous and combustible substances there are coal and lignite, graphite, sulphur, and naphtha; and among salts, common and glauber salts; besides which Siberia is rich in all kinds of rare stones.

Gold is found in nearly all parts. At the present time the Siberian gold industry extends over a vast area, and gold is exploited in the basins of the Obi, Yenesei (with the Baikal), Lena, and Amur. Beyond the 50,000 miners employed at the mines themselves, the Siberian gold industry gives occupation to a considerable population in the transport of goods to the mines and other auxiliary work. Indeed, it indirectly aids in the development of agriculture in the neighboring agricultural districts, and presents a profitable market for their produce.

In general, one of the chief hindrances to the development of the exploitation of veinous gold ores in Siberia is the absence of mechanical works, where the necessary machines could be constructed and repaired.

In the construction of the great Siberian railway, many large deposits of gold, silver, lead, and copper have been discovered. All these industries have only prospered in those places where very rich formations are worked; many of them are neglected only because the present price of labor and machinery and the difficulty of obtaining credit upon easy terms do not admit of their being worked with sufficient profit. In other countries where gold and silver mining is carried on much poorer beds are worked, and therefore the output is larger than in Siberia. The great railway, however, will facilitate and cheapen the carriage of stores and implements to the mines, and also increase the supply of labor, as many of the mines are suffering from an insufficiency of it. Under new conditions the cost of gold mining will inevitably decrease, and this will enable the poorer deposits to be worked. The output of gold will also be considerably increased, and the industry will doubtless acquire a firmer foothold.

Iron and coal, the two great factors of industrial development, are found nearly all over Siberia, from the Ural Mountains to the far eastern island of Saghalin, and rich iron beds are numerous. On account of lack of transportation facilities, both industries have been carried on to a very small extent, but as soon as the great Siberian railway is completed a constant and great demand for manufactured iron and steel will necessitate the construction of mines and iron works, the more so as the long distances will not allow the importation of heavy materials along the whole line.

For many coming years Siberia will offer an immense outlet for all kinds of machinery. Special attention should be paid to mining machinery and agricultural machinery and implements. Until lately there were no agricultural machines in Siberia. Recently small hand winnowers have been largely adopted in the Altai and in localities lying to the east of Tomsk, and horse thrashing machines have begun to appear among the rich peasants. Siberia offers also a market for wood-working and match-making machinery, flour-mill and brick machinery, paper machinery, and brewers' and sugar machinery. Hardware, tools, cutlery, and firearms would also find a ready market. The Siberian railway is now completed and in operation as far as Irkutsk, on the Baikal Sea, to the west, and Vladivostok to Khabarovka, on the eastern portion. Goods could find their way into Siberia from both sides, from Vladivostok on the Pacific, as well as from the European border, either by way of the Black and Caspian seas or by rail from St. Petersburg.

As already mentioned, notwithstanding the wealth of Siberia in the productions of the three natural kingdoms, manufacturing industry has not been able to develop itself on account of the lack of convenient and cheap communication. In view of this, in spite of the repeated attempts of the Government and of private persons to establish industry on a large scale in Siberia, manufactories and works have been started there only with great difficulty, and only those have been successful which served to satisfy the local wants of the population, or produced an article of such value that it might bear the cost of carriage to a great distance with profit.

Fairs in Siberia possess a great importance and are very numerous. The most ancient and important Siberian fair is that of Irbit, founded in 1643, administratively forming a part of the government of Perm—that is, of European Russia, but geographically an integral part of Siberian territory. Situated at the confluence of the Irbit and the Nitsa, tributaries of the Tura, Irbit forms the half-way house for a number of routes. The fair there is open from 1st of February to 1st of March, and during this time the little town wakes up and welcomes 15,000 to 20,000 strangers, doing business worth 40,000,000 to 55,000,000 rubles each time. In 1868 various goods were brought to this town to the amount of 37,311,000 rubles, of which 34,359,000 rubles worth were sold; in 1876 the figures were 49,022,000 and 45,987,000 rubles, respectively; in 1894, 54,710,000 and 52,820,000 rubles. The chief articles of trade there, after tea, are skins, honey, wax, nuts, hardware and cutlery, woolens, and cottons.

On the whole, it will be seen that there is a large field for foreign traders in Siberia. The Ural works are not able to meet the demand for iron and steel in European Russia, and the imports of machinery into Russia are yearly increasing. During the years 1893–1896 they were as follows:

	Roubles.
1893	26, 701, 623
1894	46, 345, 189
1895	53, 176, 205
1896	65, 412, 000

Russia is exerting herself to the utmost in order to develop her own machinery industry, and there is still much to be done. European Russia will not be able to supply the Siberian market, which will almost entirely depend upon importation from abroad.

The construction of the trans-Siberian railroad around the southern part of Baikal Sea offers immense technical difficulties; the Imperial Government intends now to cross the sea (about 60 versts, equal to 27½ miles) by a trestle bridge or similar construction. Should this be possible, the Government would save about 8,000,000 rubles in the construction.

The Chinese East Railroad will be connected with the Russian railways by two lines; the first one will start from the station of "Onon," of the trans-Baikalian railway, 440 versts; the second from Nikolskoje, of the Ussuri railway, 95 versts, to the eastern border of Manchuria. The Government has approved of the following rolling stock for these lines: trans-Baikalian railway—44 8-wheel locomotives, 40 passenger cars, 458 freight cars, 450 open freight cars. Ussuri railway—10 locomotives, 18 passenger cars, 149 freight cars, 50 open freight cars.

In a recent report of the United States consul at Moscow, it is stated that at a combined meeting of the committee of the Siberian railway and a department of the Imperial Council, which took place on the 16th of December of the past year, the work in the construction of the Siberian railway was considered. The construction of the first section of the central Siberian line (including the branch to the town of Tomsk), with the exception of minor unfinished work, is completed; and it is now possible to begin regular traffic. The work on the second section of the central Siberian line, on the Irkutsk-Baikal, on the North Ouroussisky and Perm-Kotlass sections is shown as follows: Seven hundred and eighty dessiatines (2,106 acres) of forest have been cut down and trunks uprooted, 2,329,000 cubic sagen (29,586,925 cubic yards) of earthwork have been laid, 224,960 square sagen (1,224,782 square yards) of railway embankment have been made, and 12,232 cubic sagen (156,391 cubic yards) of masonry have been completed. The laying of stone and cast-iron piping has been effected on the whole length of the central Siberian railway, and about 3,500 sagen (24,500 feet) of piping have been laid on the remaining sections. The construction of large and small bridges, with wooden and metal arches, is complete to the six hundred and thirtieth verst (four hundred and seventeenth mile) of the second section of the central Siberian line, as also on the North Ouroussisky railway; and besides this, 241 bridges have been constructed on the section beyond the Baikal mountain range. One thousand and twenty-three versts (678.24 miles) of the main and station lines have been laid, of which 853 versts (565.53 miles) have been ballasted. One thousand and two line and station buildings have been erected on these railways. The water supply is opened and 47 stations are being partially supplied. Of sleepers, 1,163,600 are prepared, and 4,495,100 poods (81,163 tons) of rails and fastenings. There have been completed 32 locomotives and 756 freight cars and platforms. The sections of the North Ouroussisky still in the course of construction will soon be finished.

On the 1st of September of the past year, 1897, the first through train from Vladivostok arrived at Kharabarovsk. For the construction of a railway ferry across the Baikal Lake, parts of the frame and machinery of a ferry ice cutter and the machinery for a floating dock have been conveyed to the town of Krasnoyarsk and to the village of Listvinnichnoia, where storehouses and workshops are erected. The work of putting the parts of the ferry ice cutter together and of constructing piers on the lake has been begun. For the improvement of the navigation on the rivers Angora, Schilka, Amur, and Oussouri, soundings were made and navigation charts prepared. There are now employed on these rivers 2 steamers, 1 steam launch, 6 barges and 2 dredges. The construction of a stone quay in Vladivostok has been commenced. The general result of the work from 1895 to 1897 is shown as follows: Earthwork, 7,536,500 cubic sagen (95,741,462 cubic yards); rails laid, 2,959 versts (1,696.61 miles); ballasted, 3,051 versts (2,022.81 miles).

The *Moniteur des Intérêts Matériels* reports that the Russian Government has decided upon the immediate construction of a line connecting the Oussouri railway with the Chinese frontier. This branch is to be finished and open for working by the 1st of January, 1900, at latest.

OPENING FOR SHIPBUILDERS IN RUSSIA.

[British Board of Trade Journal.]

A report, dated June 2, has been received at the foreign office from the acting British consul-general at Odessa, stating that, in view of the recent abrogation of important duty on ships built abroad entering Russia, and also of the decision of the Government to reserve exclusively to vessels under the Russian flag the rapidly increasing carrying trade between the Baltic, Black, and other seas, and with Russian ports in the far East—the attention of shipbuilding firms in Great Britain should be directed to the possibility of securing orders for the new ships which will become indispensable to the Russian mercantile fleet, if it is to cope with the increasing demands

made upon it. Such orders should be secured as promptly as possible, in order that the English firms may not be forestalled by foreign rivals.

For a period of four years, dating forward from January 1, 1898, the Russian Government has accorded to the Black Sea and Danube Steamship Company the right of plying between Odessa and ports on the Danube, at the same time granting a mileage allowance of 3 rubles 46 copecks per mile, with a limit of 330,180 rubles per annum, the company undertaking to acquire a tugboat and five barges, and to maintain a regular weekly service on the following lines, viz: Odessa-Ismail, Odessa-Karabbia, Karabbia-Kladovo, Rena-Kladovo.

SIBERIA AS A GRAIN-EXPORTING COUNTRY.

[Consul Stephan in Consular Reports, 1897.]

In a recent number of Dr. Conrad's *Jahrbücher für Nationalökonomie und Statistik*, there appeared an article by Dr. Ballod "Concerning the importance of the husbandry of Siberia." Considering the interest which Siberia is entitled to claim as a mighty field for colonization lying at the doors of Europe on the one side and the importance which it seems to acquire as a new grain-producing region on the other, it is especially gratifying when the results of careful investigation enable the widest possible circles to form an opinion as to the actual conditions of the country.

As Dr. Ballod remarks, Siberia has often been compared with the United States, and the opinion expressed that it presents to Russia quite as great and profitable a field for colonization as did once North America to England. This comparison as to what hopes and fears Siberia has given and may possibly give rise to is perhaps the best form of regarding the question. Nevertheless, such a comparison is thoroughly out of place, because, in respect to climate, conditions of soil, and capabilities of expansion of the regions still available for colonizing purposes, Siberia corresponds fairly with Canada, and, moreover, it contains almost the same number of inhabitants. The region of the Amur is, likewise, no better for colonization than British Columbia, inasmuch as it, too, has in the summer time an equally overmoist and unfavorable climate for grain growing.

With regard to the colonization of Siberia, the immigration (only that which comes from Russia is worth taking into consideration) has increased very largely of late. While in the eighties it hardly amounted to 10,000 to 20,000 annually, it rose in 1895 to over 100,000. It is claimed that in the present year, up to the middle of June, the number had risen to 145,000, so that neither could suitable provision be made for the new arrivals nor was enough surveyed land available. Dr. Ballod thinks that one may safely reckon on 200,000 to 250,000 immigrants for the next few years. Even European Russia would not sustain any palpable loss by such an outflow of emigrants, for her annual excess of births over deaths amounts to over 1,500,000 souls, so that the fear of some few strips of land in European Russia, which are now devoted to farming, becoming depopulated and of a want of farming hands being felt is thoroughly unjustified.

But with so strong an immigration as that referred to above, the land available for cultivation would hardly suffice for twenty-five years. The total area of cultivable soil in eastern and western Siberia and Transbaikalia amounts to 18,000 geographical square miles, or, in round figures, 247,000,000 acres. But of these millions at least 98,000,000 acres must be left to the present owners, even if their possessions beyond 18 dessiatines (48½ acres)—which is the limit allowed by law to each head—should be confiscated. For the new settlers the Government allows 15 dessiatines (40½ acres) per male. Besides this, one-fourth of the lands is to be held in reserve for the future growth of the population. According to this there would be about 112,000,000 acres available for the immigrants, and thereon 2,600,000 males, making 5,500,000 for the whole, could settle.

The country population would thus have grown to the extent of 150 per cent, and they would be able to produce two and a half times as much grain as the present population. Siberia, exclusive of the Amur region, could then raise 400,000,000 poods (6,453,000 tons) of grain; or, if the area of the grain-growing districts increases in proportion to the present dimensions by 25 per cent, 500,000,000 poods (8,060,000 tons), that is to say, only one-fourth or one-fifth of the entire Russian grain harvest. There would thus be from 87,000,000 to 110,000,000 poods (1,402,000 to 1,773,000 tons) available for export, after providing for the population of the cities, towns, and mining districts, instead of 35,000,000 to 44,000,000 poods (550,000 to 710,000 tons). This would only represent about 11 to 12 per cent of the soil suited to grain growing, whereas in western Europe, 25 to 30 per cent of the agricultural land is devoted to this purpose. The production represented by the above figures is, however, capable of being increased to the extent of from two to two and a half times, but not without careful cultivation of the soil by manuring, etc. Assuming, however, that the area of the grain land should increase to 25 per cent of the total cultivable land and that thus the quantity available for export should rise to from 174,000,000 to 220,000,000 poods (2,805,000 to 3,546,000 tons), this would still not amount to 50 per cent of the present total Russian export. However, this would not happen before forty or fifty years at the earliest. In the meanwhile, the exports from

European Russia would most certainly have become greatly reduced in consequence of the strong increase of the population, and even, possibly, have ceased altogether.

The Amur and Ussuria, which have not been taken into account in the foregoing, are said to contain about 28,000,000 hectares (69,100,000 acres) of cultivable land. That these will ever be able to send desirable grain, and more particularly wheat, to the European market appears doubtful, on account of the bad quality of the grain raised there. It is more likely that they may provide the markets of northern China with millet, etc.

A great increase in the cultivation of grain as a consequence of the eventful completion of the Siberian railway system is, as the author seeks to prove from careful estimates of production and freights in his possession, not to be expected so long as low prices rule on the markets of the world. It would be necessary for the Siberian peasant to export more cheaply than he has hitherto, in the absence of railways, been paid for his grain on the home markets. But should the prices of the markets of the world rise materially the profitable cultivation of wheat in middle Siberia would become a possibility, and this would probably bring about an important increase in exports.

Dr. Ballod arrives at the conclusion that the Siberian Railway will, at first, only open up the country for the export of the more valuable classes of goods and facilitate wholesale immigration. It will be of enormous importance as a transit route for goods of high value from China and Japan, and also for passenger traffic from and to these countries; but it will be serviceable to the development of grain export only in a very limited degree. This end could only be attained by the construction of cheaper export highways, which will, perhaps, follow with the progress of colonization.

COST OF THE SIBERIAN RAILWAY.

Latest reports on the trans-Siberian railway indicate that it has already cost over \$200,000,000, and that there are yet about 1,000 miles of the 3,644 miles to be built. The following table shows the cost of the road during the term 1893 to 1897:

DESCRIPTION.	Cost.	
	<i>Rubles.</i>	<i>Dollars.</i>
Construction of the Western Siberian Railway, without the Baikal branch.....	50,743,111	25,371,555
Central Siberian Railway.....	97,766,591	48,888,298
Branch line of Ekaterinburg-Cheliabinsk.....	6,535,258	3,267,629
South Ouroussisk branch.....	22,416,284	11,208,142
North Ouroussisk branch.....	22,461,130	11,230,565
Irkutsk-Baikal branch.....	2,405,914	1,202,957
Steam ferry across Lake Baikal.....	3,404,171	1,702,085
Zabaikalski Railway.....	72,447,186	36,223,593
Tomsk branch.....	2,609,765	1,304,882
Onon branch to the Chinese frontier.....	32,727,600	16,363,800
Nielski branch to the Chinese frontier.....	8,811,120	4,405,560
Perm-Cotlass branch.....	36,513,886	18,256,943
Various supplementary expenditures.....	21,167,865	10,588,932
Total expenditures.....	371,009,947	188,014,938

THE SIBERIAN RAILWAY OFFICIALLY DISCUSSED.

[From *Siberia and the Great Siberian Railway*; issued by the department of trade and manufactures, St. Petersburg, 1893.]

After the annexation of the extensive Amur and littoral territories and of the Ussuria region the want was felt of good ways of communication, on the one hand, in order to keep possession of them, and, on the other, in order to attract settlers and form new centers of population. In consequence of this a series of schemes appeared for the construction of new roads in Siberia, and Count Mouraviev-Amourski himself was almost the first who conceived the idea of a railway in this country. Upon the occupation of the mouths of the Amur in 1850, and especially after the successful expeditions of Count Mouraviev himself down that river, the inconveniences of the estuary for the entry into the river began to become evident, and accordingly there arose the idea of making use of the splendid bay of De Castri, in the Tartar Straits, and of uniting it with Sofisk, on the Amur, by a carriage road, with the intention of subsequently converting it into a railway. The surveys in this locality and the scheme for such a road were carried out in 1857 by Colonel Romanov, but the road itself was not destined to be realized for want of means. Simultaneously with this appeared the proposal of the English engineer, Dull. He conceived the idea of carrying a horse tramway from Nizhni-Novgorod through Kazan and Perm to one of the Siberian ports

of the Pacific Ocean; but this scheme, unsupported by any estimates, was obviously of too unsubstantial a character, and the Government accordingly passed it over in silence.

In the same year another foreigner, the American citizen Collins, petitioned the Government to authorize him to found a stock company, to be styled the Amur Railway Company, to unite Irkutsk and Chita. For the realization of this enterprise Collins wished to issue shares of 100 rubles, calculating upon getting all the necessary capital subscribed in Siberia itself. This scheme, although likewise destitute of any solid foundation, thanks to the sympathetic attitude of the then governor-general, Count Mouraviev, was examined on the very shortest notice, both in the ministry of ways of communication and in the Siberian committee, but in both institutions, albeit on different grounds, it was found to be inopportune and was rejected.

The third proposal, following close upon the second in 1855, aimed at uniting by rail Moscow and the Tartar Straits, on the Pacific shore of Siberia. The authors of this scheme were the Englishmen, Morrison, Horn, and Sleigh, who, without demanding any guaranty of income from the Government, yet petitioned for such considerable privileges that their granting would have led to the concentration of the whole Siberian trade and industry in the hands of foreigners for a very long period. At the same time they gave the Government no guaranty for the timely and successful accomplishment of the work contemplated. On more intimate acquaintance with the said proposal it appeared that it was founded upon no preliminary surveys. On this ground the Government did not find it deserving of attention, and informed the proposers of the scheme that the construction of a railway from Nizhni-Novgorod to the Tartar Bay did not enter into the plans of the Government, and therefore could not be accepted.

The question of the Siberian Railway aroused a lively interest in official and private circles, and therefore there was no lack of new, more or less imposing propositions. In the same year, 1858, appeared Sofronov's scheme to carry a railway from Saratov through the Kirghiz Steppes to Semipalatinsk, Minusinsk, Selenginsk, the Amur, and Pekin. Against it there then appeared in print many objections, in which was pointed out, among other things, the necessity of taking the line along the great Siberian tract, which had existed from time immemorial, crossing the Ural and connecting Nizhni-Novgorod with Kiakhta. Sofronov's scheme, like all the preceding ones, was a paper scheme, and not the result of actual investigation of the trading and industrial needs of the localities through which this mighty route was to pass. Submitted to Count Mouraviev-Amoursky's consideration, it called forth several corrections and additions, but had no practical consequences.

Of a much more practical character was the undertaking proposed by Kokorev & Co., who in 1862, having formed the idea of uniting the basins of the Volga and the Obi, those two giant streams of European Russia and Siberia, availed themselves of the scheme of the mining engineer Rashet, for a long time head of the Government and private mining works in the Ural and perfectly acquainted with that district. The surveys carried out with reference to this scheme pointed to the following line: From Perm, via the Nizhni-Tagil works, to Tiumen, 678 versts, with a branch to Irbit, 13 versts. This scheme, completely satisfying the demands of the through route, appeared to be the most desirable for the whole Ural mining industry, whose representatives received it very favorably. However, soon afterwards the same men abandoned the direction indicated by Rashet's schemes and adopted another, proposed by Colonel Bogdanovich.

The latter's plan was one of the results of his dispatch in 1866 to the government of Viatka to take measures against the injurious consequences of the crop failure which befell that country in 1864. After only two months from his departure from St. Petersburg Bogdanovich reported by telegraph to the minister of the interior on the 23d of March, 1866, as follows:

After removing all difficulties in the provisioning of the governments of Perm and Viatka and investigating the local conditions I am of opinion that the only sure means of preventing famine in the Ural country in the future is the building of a railway from the governments of the interior to Ekaterinburg and thence to Tiumen. Such a line, being subsequently continued through Siberia to the Chinese frontier, would acquire a great importance, both strategical and for international trade.

Afterwards, on the receipt from Bogdanovich of a more detailed report on the subject, it was, in April, 1868, thought good to authorize the said person to carry out detailed surveys and form a scheme for a railway from the village of Yershov through Ekaterinburg to Tiumen. The original project was somewhat hastily drafted, and therefore the author subsequently had to make several corrections and additions in it.

The two schemes referred to, powerfully affecting the interests of different parts of Siberia, called into existence a third in 1869, that of the trader Liubimov. The latter carried out surveys from Perm through the towns of Kungur, Ekaterinburg, and Shadrinsk to the hamlet of Bieloozersk, situated 49 versts to the north of Kurgan on the river Tobol, a distance of 711 versts. There was at the same time in view to carry from the main line a side mining branch in a northern direction from Ekaterinburg through the Nizhni-Tagil works to the Kushvinsk Government works, over a length of 131 versts.

The then governor-general of Western Siberia, Adjutant-General Khrushchov, also directed attention to the carrying out of these surveys closely affecting the country intrusted to his care, and having become acquainted on the spot with the direction of trade and its needs, presented at the end of 1869 a memorial addressed to the Emperor

upon the necessity of the rapid solution of the question of the building of the Siberian railway, pointing out at the same time the nearest route for it through Nizhni-Novgorod to Kazan and Tiumen.

Thus, at the end of the sixties, upon the question of the construction of a Siberian railway there were sharply defined the three above-mentioned routes according to the schemes, respectively, of Rashet, Liubimov, and Bogdanovich. All three begin at Perm, and they end, the first and third, in the town of Tiumen, and the second at Bieloozersk on the river Tobol, which it was proposed to make navigable. In the numerous discussions of these schemes in scientific societies and in literature, the first route was named the Northern, the second the Middle, and the third the Southern. Although no small number of preliminary surveys were made in all these directions, yet, when in connection with the above-mentioned report of Adjutant-General Khrushchov, this question began to be discussed in the higher Government spheres, it was found possible, in the first place, to build only a part of the line projected, 700 versts in length, in order to join the Kama with the Tobol.

In order to form an opinion from the mass of not fully elaborated and not always exact data collected during the carrying out of private surveys, as well as to determine the most advantageous route for this line, a special commission was fitted out to the Ural, for whom the satisfaction of the needs of the Ural mining industry was to have the greatest weight, while at the same time it was pointed out to them that the road must, although to a slight extent only, answer to the requirements of the Siberian transit trade. However, on a closer acquaintance with the matter, it appeared that these objects are incompatible, and therefore the preference was given to the Ural railway, the question of the Siberian road remaining open for some time. The surveys afterwards carried out in 1872-1874 by the Government established three principal routes: (1) Kineshma, Viatka, Perm, Ekaterinburg, 933 versts; (2) Nizhni, Kazan, Krasnoufimsk, Ekaterinburg, 1,172 versts; (3) Alaty, Ufa, Cheliabinsk, 1,173 versts. Thus, the first route proves to be a development of Mr. Rashet's scheme, that is, of the northern; the second, the altered scheme of Mr. Bogdanovich, or the southern; and, finally, the third, a compromise for the simultaneous satisfaction of the requirements of the Siberian and Central Asiatic transit traffic. The committee of ministers on examining these routes had its attention arrested mainly by the first two, and in 1875 it was decided to carry the Siberian railway by the route from Nizhni-Novgorod along the hilly bank of the Volga to Kazan, Ekaterinburg, and Tiumen.

It will be appropriate to observe here that the choice of the direction for the Siberian railway between north and south everywhere called forth very lively discussions. Various pamphlets appeared arguing for and against the said routes, the constant subject of dispute being not the direction of the railway in the Siberian territory, but its direction within the limits of European Russia. From the above-quoted enumeration of the routes it is clear that all the proposals agreed in this, that whencesoever the line of railway begin, it must necessarily pass through Tiumen. Further than this point few went, and few interested themselves whether the line led through the southern steppes and traversed cultivated centers or extended through the thickets of the north, while only passing through the most important places.

In consequence of such being the situation of a matter so deeply interesting to Siberia, the higher administrative authorities of the country more than once raised the question of the immediate laying down of railway communication between different very important points of the country. Thus already in 1875 a petition was started to build a railway from Vladivostok to Lake Khanko, which was followed by a lively correspondence in higher Government spheres upon the construction of railways by preference in eastern Siberia within the territory of the Littoral and the Ussuri region, especially in view of the development in all directions of China and Japan. However the then difficult position of the imperial finances did not permit of immediately proceeding to the realization of such desirable propositions.

Continuing to discuss the most advantageous route for the Siberian line, the Government at the same time did not cease to occupy itself with the enlargement of the general system of railways, which in 1877 already reached Orenburg. In the following year, 1878, the Ural railway was opened, and in 1880 was completed the imposing structure of the Emperor Alexander II bridge across the Volga, while finally, in the same year, ensued an imperial command for the immediate building of the section of railway between Ekaterinburg and Tiumen. The accomplishment of the above-named constructions in connection with the results of new surveys showed that the southern route for the Siberian railway, sanctioned in 1875, on account of altered circumstances, could no longer answer to its destination. Accordingly in 1882 the discussion of the Siberian main line was begun afresh, which demanded the carrying out of supplementary surveys in several new directions, so that in 1884 the possibility appeared of presenting the three following routes instead of the southern. Of these, the first was from Nizhni-Novgorod through Kazan, the Nikoloberezyovsk wharf and Ekaterinburg to Tiumen; the second from Samara via Ufa, Krasnoufimsk, and Ekaterinburg to Tiumen; and the third from Samara through Ufa, Zlatoust, to Cheliabinsk. The choice of one of these three directions would predetermine to a certain extent that of the main Siberian line itself, and at the same time decide the question finally, without having sufficient data on the route which Siberian freights would take on the completion of the Ekaterinburg-Tiumen line then under construction, joining the basins of the Volga and the Obi, and also in consequence of the imminent completion of the Obi-Yenisei

Canal for the uniting of the basins of the Obi and Yenisei, did not seem possible. Really the realization of these two works was opening over a vast extent a water route connecting the basin of the Volga with Lake Baikal, and consequently must have a serious influence upon the direction to be taken by the railway line right through Siberia. On the other hand arose the question, was there any necessity, with the existence of excellent water communication, for the immediate construction of an unbroken line of railway through the whole of Siberia, and was it not better to be content in the first instance with the building of isolated sections possessing some political, strategical, or industrial importance.

In this last respect the schemes put forth by the engineers Ostrovsky and Sidensner deserve particular attention. The former presented his proposal in the beginning of 1880. He maintained the idea that at that time, for the consolidation and economical development of Siberia and its relations with Russia, it was necessary above all things to improve and facilitate the internal communications of Siberia and only then complete the routes of transit then in existence upon this side of the Ural. Under the existing circumstances he saw no need for an unbroken line of railway right through Siberia. The author saw the solution of these problems merely in the quickest possible construction of the following three roads: Perm-Tobolsk, to unite the two large rivers Kama and Irtysh; Tomsk-Krasnoyarsk, to unite the Obi and the Yenisei, and finally the third, Omsk-Barnaoul, to unite the Irtysh at Omsk with the Obi at Barnaoul, with its continuation to Biisk, and, further, to the frontiers of China. On the creation of the two first lines for an extent of 800 and 560 versts, respectively, extensive communication is opened between the basin of the Volga and that of lake Baikal, this union being effected not with the aid of shallow and not always navigable rivers, but through the Kama and the Irtysh, which never lack water.

The engineer Ostrovsky ascribed special importance to the Omsk-Barnaoul line. This line would shorten the great water road from the immensely rich mining district of Altai to Tobolsk, and would strengthen the trade with China through Biisk, Kobdo, and Ulyasutai. Only by taking advantage to the largest extent of the waterways of Siberia would be realized a cheap and convenient communication between the center of Siberia, Irkutsk, and the center of European Russia, Moscow. The direct union, by an unbroken line of railway, of the two centers referred to will become urgent and realizable only in the more or less distant future, and, beyond controversy, only on Siberia attaining a higher degree of civilization than at present. Having examined the conditions which this imposing construction must satisfy, the engineer Ostrovsky indicates in general terms its direction from Moscow to Irkutsk as follows: The road should pass through Riazan, Spassk, Ufa, and thence through Zlatoust, Cheliaba, Petropavlovsk, Omsk, Kainsk, Tomsk, Mariinsk, Achinsk, Krasnoyarsk, Kansk, Udinsk, and Balagansk to Irkutsk. It will thus throughout its whole extent meet all the chief administrative and trading centers of Siberia, will nowhere quit the zone of densest population, and will traverse almost exclusively the fertile chernoziom tract, from the Volga to the Yenisei. The construction of the southern line might be accomplished in separate sections, each of which might be completed independently of the rest, preserving its own proper importance.

The route quoted of the Siberian railway indicated by the engineer Ostrovsky deserves attention in this respect that it almost exactly coincides with that which is now finally adopted for the Great Siberian Railway.

The engineer Sidensner, who took part in the expedition for carrying out the surveys in connection with the construction of the Obi-Yenisei Canal, expressed the opinion that with the realization of this work and the removal of the rapids in the lower part of the Angara a vast waterway would be opened of 5,000 versts extent from Tiumen to Baikal. Next from Baikal begins the coast road to Sretensk of 950 versts; and there again, a new waterway by the Amur for 3,000 versts. Discussing in detail the cart road, Sidensner draws the conclusion that as a matter of fact it may be considerably shortened, as the first 150 versts pass by the shore of Baikal and the valley of the navigable river Serenga, and the last 350 versts along the shore of the raftable river Ingoda and in part of the Shilka. Thus, the road is reduced to 450 versts, and even here, from the happy direction of many shallow rivers which can easily be made navigable, there only remains the pass across the Yablonovoi range from the Areisk Lake to the settlement of Tanginsk, a distance of 18 versts; and only over this small section will it be necessary to build a railway to unite by a water route the basin of the Volga with the Pacific shore of Siberia. The proposition to carry out surveys in this direction, although met with favor, in consequence of the want of means could not be accepted.

Yet many more schemes were presented, which were discussed both in Government spheres and in scientific societies, but the majority of them suffered from a lack of actual foundation. Special commissions were organized in the Imperial Russian Technical Society and in the Society for Promoting Russian Trade and Industry, which labored very long upon the consideration of the question of the route and cost of the Siberian Railway, but to write about all the schemes placed before these meetings would take up very much time; they fill books. The principal directions are marked upon the map appended to this work, omitting the variations whose name is legion.

Independently of the schemes proposed by private persons several governors-general of Siberia began vehemently to urge the necessity of building different sections of the line. Among these petitions particularly noteworthy are the schemes for sections of the way from Tomsk to Irkutsk and from Baikal to Sretensk, put forth by

Baron Korf and Count Ignatiev, intended to unite the Western Siberian navigation with that of Eastern Siberia on the Amur. To these two sections a third was soon added, from Vladivostok through Razdolnoe, Nikolskoe, and Anuchino to the Busse Post. The surveys carried out in these directions only touched the technical side of the matter, leaving the economical entirely aside, in consequence of which in 1887 it was not considered possible to proceed to the preparatory works for the carrying out of the schemes referred to. An exception was made only in reference to the Ussuri line, the construction of which was put in the first rank. This question was in 1890 placed for consideration before a special commission, which was also charged with elucidating in what order the different sections should be built, in order as far as possible to lighten the sacrifices of the treasury and draw the greatest advantages from the working of those sections which should be constructed first.

In the special commission at the end of 1890, when the system of Russian railways projected eastward in three lines whose extreme points were Tiumen on the Ural line, Miass on that of Zlatoust-Miass, and Orenburg on the Orenburg line, on the discussion of the question of the conditions of the construction of the Great Siberian Railway, new circumstances cropped up which somewhat altered the former view of the matter. Strategical views partly gave way before considerations of an economical and commercial character, it being at the same time declared that the aim of the creation of the Siberian railway should consist not so much in the opening in Siberia of new markets for the sale of the productions of European Russia, as in affording Siberia itself the possibility of marching along the road of normal economical development and placing that vast country, so richly endowed by nature but bereft of convenient ways of communication, as far as possible in the same conditions as those which European Russia at present enjoys. Only in close economic communication with European Russia could Siberia grow and develop. On the other hand, European Russia in economical relation with Siberia would draw upon new sources for its development and enrichment.

The commencement of the Siberian railway from the east—that is, from the Ussuri section—would not completely answer to the objects laid down, and it was therefore recognized as more expedient to begin this great work simultaneously from the opposite ends in the east and west. The terminus of the line at its eastern end was one starting point, namely Vladivostok, and about this there were no differences of opinion and no disputes. Other point to the slightest extent suitable for the purpose, there is none upon the Pacific shore of Siberia.

The choice, on the other hand, of the western terminus offered a more difficult problem, which, however, at last was reduced to the selection of one of the three above-mentioned points with which the railway system of European Russia terminated toward the east. From whatever point the Siberian railway was begun, on continuing it into the depth of the country all three variants must necessarily join approximately at a point near Nizhneoudinsk, as is shown upon the annexed map.

Choosing Tiumen as the point of departure, the line must be carried to Yalutorovsk and Kainsk, leaving Tomsk by the way, as the taking of it in a more northerly direction to Tomsk is excessively difficult, in consequence of a desert region covered with forests and swamps. Farther on, the line must go to Mariinsk, Krasnoyarsk, and Nizhneoudinsk. The distance from Tiumen to the last point is 3,474 versts. If the starting point chosen be the station of Miass, the road will pass through Kurgan, Kainsk, Kolyvan, Mariinsk, Krasnoyarsk, and Nizhneoudinsk. The total distance is in this case 2,683 versts. Finally, selecting Orenberg, the line must be taken to Orsk, Atbassar, Akmolinsk, Pavlodar, Biisk, Minousinsk, and Nizhneoudinsk. The total extent of the road by this route is 3,400 versts.

Comparing the advantages and excellences of laying down the line in these three directions, the following is the result. Uniting the Siberian road with Tiumen without connecting it with the general system deprives it the importance of a line of transit. But if the Ural line be produced from Perm to Nizhni, then, in the first place, this distance of 1,000 versts will cost about 71,000,000 rubles, and in the second, the said line from its technical conditions will present many difficulties in the way of profitable through goods traffic. The second route is 791 versts shorter than the preceding, and besides this embraces the most populous parts of Western Siberia, with a chernozion and exceedingly fertile zone producing much more grain than is required on the spot. The third route, traversing several large administrative and industrial centers, at the same time passes through a very unsuitable region in its western half. For about 1,500 versts the line goes through waterless, thinly populated steppes little adapted to civilized life, where in winter rage the fiercest winds, in consequence of which there are frequent snowdrifts. In its eastern half this route intersects an extensive mountainous district and the carrying through it of a railway will require a crowd of technical complications and an increase in the cost of construction connected therewith. With all this the route in question is 717 versts longer than the preceding. Thus all the advantages proved to be in favor of prolonging the Samara-Zlatoust-Miass Railway through Cheliabinsk, Kurgan and so on.

In consequence of all the above, the question of the construction of the great Siberian railway was resolved on the 21st of February, 1891, in the sense of proceeding in the same year to the building, by direct order of the treasury, of the railway from the station of Miass to the completion of the Zlatoust-Miass line in construction to Cheliabinsk, and to the carrying out of surveys from Cheliabinsk to Tomsk or some other point of the middle

Siberian section. Finally, by an imperial rescript given the 17th of March, 1891, in the name of His Imperial Highness the Tsarevich, the question of the construction of the great Siberian railway was finally and irrevocably decided in the affirmative.

The gracious will of His Majesty the Emperor, clearly expressed in this rescript, put an end to many years of hesitation and doubt as to the accomplishment of the said great undertaking, and now the Government has taken all the necessary measures for the most successful realization possible of this good conception, which has a perfect right to take one of the first places among the most extensive and important enterprises of the expiring century, not only in this country but in the whole world.

SIBERIAN RAILWAY TO BE SHORTENED BY A LINE THROUGH NORTH CHINA.

[Consul-General Karel in Consular Reports, 1897.]

At the beginning of the work on the trans-Siberian railway the trans-Baikal and Amur section was planned to extend from China through Sretensk, on the shores of the river Shilka, to Pokrovskaia; thence along the northern shore of the river Amur to Khabarovsk, to join the Ussuri railroad (running south to Vladivostok). But investigation clearly showed that the construction of a line in that section involved such technical difficulties as would greatly increase the cost of the undertaking. Thus, for example, on the Sretensk-Khabarovsk section, 1,667 versts (1,105 miles) long, the cost per verst (0.663 mile) would amount to the sum of 90,000 rubles (\$46,260). This first raised the question of building the trans-Siberian railway through Chinese territory, and investigation made in Manchuria showed that it would not only cheapen and shorten the construction of the road, but would present other advantages. Negotiations were begun on this subject, and the result was that the Chinese Government gave a concession to the Russo-Chinese Bank, and a new company, called the Eastern Chinese Railway Company, was formed, which is to construct and work a railway within Chinese territory. The articles of association of the new company were sanctioned by the Czar December 16, 1896, and by an imperial ordinance issued on the 23d of December, 1896.

The details of the arrangement are these: The association has been organized on the strength of the convention concluded August 27, 1896, by the Chinese Government with the Russo-Chinese Government Bank for the construction and exploitation of a railroad within the boundaries of China, from a point on the western frontier of the province of Heilung Chang to a point on the eastern frontier of Kirin, and to be connected with the branches of the trans-Siberian railway which the Russian Government intends to build. The company may, with the permission of the Chinese Government, work, in connection with the railroad or separately, coal mines and other mining, industrial, and commercial enterprises in China. In case such enterprises should be worked independently of the railroad, then the company must keep a separate set of books for each of them. The Russo-Chinese Bank takes upon itself the duty of organizing this company, and when the same is organized all the rights and duties concerning the construction and exploitation of the line granted by the above-mentioned convention are conferred upon the company. The company will be considered organized as soon as the Government bank presents to the minister of finance proof that the founders of the company have paid in the first installment of the shares, and they should be paid in not later than two months after the confirmation of the articles of association. The balance of the shares should be paid in, according to their nominal value, not later than a year after the organization of the company. Shares can be held only by Russian and Chinese subjects. According to the convention, the company will own the Chinese Eastern Railway during eighty years after the opening of the whole line.

The Russian Government guarantees the resources of the company to the extent of making obligatory the payment of shares. The company takes upon itself, during the whole period of the concession, on the part of the Russian Government, the following obligations:

(1) The Chinese Eastern Railway, with its appurtenances and rolling stock, must be always kept in full order to satisfy all the requirements of operation in relation to safety, convenience, and constant movement of passengers and freights.

(2) The traffic on the Chinese Eastern Railway to be kept up in conformity with the traffic on the Russian railroads connecting with the Chinese railway named.

(3) All trains of the Russian trans-Baikal and Ussuri railroads are to be met by the Chinese Eastern Railway and forwarded to their destination without delay.

(4) The company binds itself to transmit, with a speed not less than that used on the Siberian railway, all passenger and freight trains in direct communication with it.

(5) The company binds itself to construct and use on the whole length of the road a telegraph line, connecting with the telegraph lines of the Russian railroads, and to receive and send, without delay, through dispatches going from one frontier station to another, as well as telegrams going from Russia to China and the reverse.

(6) If, after the development of the operation of the railway, its technical arrangements shall not satisfy the requirements of a regular and uninterrupted traffic of passengers and freights, then, as soon as the Russian railways require the Chinese Eastern Railway to be reenforced, the latter must take suitable measures to improve its technical arrangements for the increase of its traffic.

The new line will begin at the Onon station of the trans-Baikal railroad and will cross the Chinese frontier near the town of Staro-Zurukhait. It will run in Manchuria toward the towns of Cicikar (Tsitsikar), Khu-lan-Chen, and Ning-tu and connect with the Nikolsk station of the South Ussuri Railroad. The total length of the Manchuria railway will be 1,920 versts (1,273 miles), of which 1,425 versts (945 miles) will be in Chinese territory. According to the original survey of the Siberian line, the length of the road between the stations Onon and Nikolsk showed 2,434 versts (1,614 miles), consequently the course through Manchuria will shorten the Siberian railway 514 versts (341 miles), which is a great saving. Besides, the Manchuria line will go more to the south than the former Amur direction (the difference in some parts being 600 versts = 398 miles) through a country of better climate, with more productive soil. It will also cross the fruitful valley of the river Sungari, which supplies the Amur region with bread. In general, northern Manchuria, which the new line will cross in the middle, possesses natural wealth, some of which to some extent is already worked. The agricultural industry forms the principal occupation of the Manchurian population. Wheat, barley, buckwheat, rice, millet, pease, and maize are cultivated in considerable quantities. Manchuria poppy and tobacco are well known for their quality and the extent to which they are cultivated. Another important industry in that country is cattle breeding. Of mineral wealth, Manchuria is rich in iron ore, and, not long ago, work on gold mines was begun. On the line itself and its region in Manchuria are several large commercial points. Among the principal ones are Girin, Khailar, and Cicikar (Tsitsikar). Well-known annual fairs are held in Flandchur, in which northern Mongolia and northern Manchuria generally take the principal part, and also, to some extent, the Russian trans-Baikal. At the end of eighty years the road is to pass into the possession of the Chinese Government.

RUSSIA IN THE CHINESE MARKETS.

[United States Consul Bedloe in Consular Reports, November, 1898.]

In recent reports which I had the honor to submit to the Department special attention was invited to the manner in which Dutch (Java) and Russian (Batum) oils are crowding out our American kerosene from the great markets of the densely populated Empire of China, and I pointed out the advantage which our Dutch rival has in the important matter of freight, the sources of supply being much nearer China than our American petroleum wells. I now beg to respectfully draw the attention of our people at home, who are interested in the important matter of American trade, in addition to the points to which I referred in my reports on American oil in China, to another and very grave menace with which our trade in China will probably soon be threatened. It is the system by which Russian merchants will undoubtedly seek to expand their trade with the Celestial Empire as soon as through railroad communication is completely established between Russia in Europe and China via Siberia and Manchuria.

It must interest and concern our American manufacturers and exporters to note the extension of the Russian efforts to obtain territorial concessions from China and their possible effect on American trade in the Chinese Empire. The importance of this question to our manufacturers and the gravity of the issues involved are made clearer by a retrospective view of Russia's action in other parts of Asia, where the Russian merchants have had to meet British competitors. Russia's success in Central Asia in pushing her products ahead of her rivals will undoubtedly be repeated in China, with a result serious to us where our trade interests clash with hers in cotton goods, kerosene, and flour. The Russian system will be applied in China to all rivals in trade when the through railroad line enables Moscow manufacturers and merchants to pour their products into the Empire of China on terms and under conditions which Russians will be in a position to fix as they please.

It is obvious that Russia's policy is not only the acquisition of an ice-free seaport like Port Arthur or Talien-wan. She has for fifty years or more been planning to capture the rich markets of this vast Chinese Empire, and to accomplish this it was necessary to run a railroad through Siberia to a convenient seacoast port open all the year. The concessions granted by China under the convention of 1895 were merely stepping-stones for the Muscovite trader to reach richer markets. It appears from the published text of the agreement which the Chinese Government is alleged to have made with the Russo-Chinese Bank that the Chinese have bound themselves to charge one-third less import duty on all Russian goods entering China through Manchuria than is paid on similar products from other foreign countries landed at a Chinese port.

Export duties are to be reduced one-third in favor of Russia. All Russian manufactured goods intended for the Chinese markets are to be charged lower transit dues than those shipped from non-Russian ports. Such an arrangement for the preferential treatment of Russia's trade would prove a serious matter for American manufacturers and merchants in the markets of the far East, and would deal a heavy blow at American commerce.

The methods Russia has successfully applied in cutting into British commerce in other parts of Asia will, it is to be presumed, be employed in China. Reasoning by analogy, we may profit by reference to the records of British and Russian trade in Khorassan and northeastern Persia. The commercial reports dealing with the foreign trade of Persia show how effectively the Russians can kill trade in products of which they desire to secure a monopoly in oriental markets where a dangerous competitor has obtained a footing. The British trade journals have admitted the fact that long-established business in Manchester piece goods has been ruined by the Russians, not by means of preferential rates for Russian merchants, or lower import duties, or similar acts of violation of treaty rights to which exception could be taken, but by a rebate on Russian imported cotton goods. On every pound of manufactured Russian cotton or other goods sent into Persia, the Moscow manufacturer and merchant receives an allowance from the Government of an amount equal to 3 half-pence (sound money), which is more than sufficient to cover the cost of freight (amounting to just a half-penny per pound), leaving a penny per pound profit in freight beside the usual profit on their goods. This rebate is, in fact, a bounty paid to the Russian mill owner and merchant, amounting to over \$3,000,000 annually, which has as effectively killed the trade in British cotton goods in Persia as the grant to continental beet-sugar manufacturers has ruined the industry of the West India sugar-cane planters. The Russian bounty system has been applied in Central Asia and adjoining frontier lands, with the result that no foreign product which Russia produces has been able to hold its own in the Eastern markets accessible to Russia or within her "sphere of influence." Competition has been killed by the device of a countervailing grant or bounty in aid of Russia's industry. Of course, this rebate or bounty system of Russia does not come under the head of preferential duties, but it works wonders for Russian trade. Why not help our American trade by similar means?

The Russian method, if enforced in China, will surely injure our trade in oil, flour, piece goods, and other products we send to China, when once the Russians have completed their railway across Siberia and are in a position to supply the Chinese markets with products of their own European factories. The system of Russian bounty will seriously affect our American kerosene interests when it is extended to oil-tank trains through Siberia and Manchuria, bringing millions of gallons of the Russian (Batum) petroleum to China. We will, of course, hold a portion of the trade, owing to the superiority of our American kerosene, which is so popular that the agents of the Russian and Dutch oils put up their goods in imitation of, and even brand and label it as, genuine American kerosene. This counterfeiting, imitating, and false labeling in China is not confined to unscrupulous people in the oil business, but immense quantities of goods "made in Germany," and also from Belgium, and "Fairbanks" scales made in Osaka, Japan, are sent to China and palmed off as American products.

COMPETITION OF RUSSIAN COTTONS IN THE MARKETS OF CHINA.

The competition of Russian cotton goods with those from British India in the markets of China is pointed out in an elaborate report by the British resident in Kashmir, who says:

Anyone walking through the bazaars in the towns of Kashgaria can not fail to be struck with the quality and variety of foreign cotton prints (chintz) with which every booth for the sale of piece goods is stocked. These prints form the bulk of the imports to Chinese Turkestan from Europe, and it is principally in the development of this trade that the Russians are exerting all their powers. To encourage their export trade, for several years past a bounty has been given on all chintz of Russian manufacture for sale in the Chinese Turkestan markets. When a merchant starts from Marghillan for Kashgar his goods are sealed by the customs officer in that town, from whom he receives a certificate. On arrival at Kashgar the bales are opened in the presence of a customs officer attached to the Russian consulate, whose duty it is to examine whether the bales had during transit been tampered with. If these are intact, he indorses the certificate received by the merchant at Marghillan, and this document henceforth becomes a negotiable instrument, for the payment of which some arrangements would appear to have been made with the Bank of Kokand.

The bounty varies according to the description of the piece goods—

On calico, 2.80 rubles per pood (36 pounds).

On chintz, 3.20 rubles per pood (36 pounds).

On Turkey red or Adrianople colored chintz, 4.20 rubles per pood (36 pounds).

This bounty, it is calculated, is more than sufficient to cover the cost of transport from Moscow or Nijni Novgorod to any city in Kashgaria, and accordingly Russian goods can be sold as cheaply in Chinese Turkestan as in the towns of their manufacture.

The bounty system is a combination of the Russian Government, which is as skillful as it is economical. Since its establishment, duty on foreign imported cotton has apparently been increased proportionally to the amount of the bounty. This has had the effect of encouraging the growth of the native cotton, which in recent years has so extended in Russian Turkestan that the Government has had to make regulations for its restriction. Another important result of the bounty system, and one which chiefly concerns the United Kingdom, is the stimulus which it has given to the Russian foreign cotton trade.

But if Russian piece goods are cheap and plentiful in Kashgar it is not solely due to the above cause. The intimate relations which exist between the manufacturers and the merchants have also contributed to this result. It is not usual for traders in Kashgar to employ middlemen in the purchase of goods. They travel themselves to Moscow, and, having direct dealings with the manufacturers, avoid all expenses of brokerage, a course which, moreover, has the advantage of making known to the manufacturers the exact requirements of native markets.

Now, if the conditions under which piece goods are brought from India are examined, they will be found much less favorable.

Despite the road improvements which have been and are still being made, the difficulties of transport will always be greater on the Indian than on the Russian side, and this disadvantage under which British merchants now labor will, it is expected, be even increased in the near future, when the projected railway between Samarkand and Kokand shall have been constructed.

RUSSIA GAINING ON ENGLAND IN THE TRADE OF THE ORIENT.

The Bulletin de la Société Géographie Commerciale calls attention to what it terms a marked decrease in the commerce of British India with Khorassan. In 1896-97 it says the value of the English exports from Bombay to Mashad was only some \$437,900; less than half that of the preceding year. Tea and indigo were formerly the chief articles of export. In 1895 Bombay sent to Mashad \$184,927 worth of tea; in 1896 only \$53,532, and of this figure \$3,796 represents the value of the tea sent to Russian territory. The same is true of indigo; the imports have fallen from \$109,010 to \$16,546. This condition of affairs it explains as follows:

(1) The customs regulations in force along the whole extent of the trans-Caspian frontier prohibit the admittance of European and British-Indian goods to the markets of Central Asia, with the exception of tea, indigo, muslin, spices, Indian shoes, precious stones, and coral; and these articles are subject to high duties.

(2) Russia has succeeded in having these articles transported by way of Batum, thus aiding the trans-Caspian Railway.

(3) The Government of the Czar is trying to monopolize the commerce of eastern and southern Persia. Subsidies are granted to traders, good roads have been made in the trans-Caspian territory, consular agents are installed in several districts of Khorassan, and the emigration of Russian merchants to different points of the province is encouraged.

(4) The Russians trade only for cash, thus risking nothing, while the Indian merchants, following their ancient customs, give credit. The Russians are not only extending their traffic in the Khorassan; they have penetrated almost to the frontiers of India, so that in the very places where the English merchants ought to be masters of the market Russian goods are sold. In addition, the Russians are doing their best to induce the Indian merchants established at Bokhara to give up all relations with Bombay and to buy the Chinese green tea, imported by the land route. To facilitate the sale of cotton goods, the Russian Government gives to exporters heavy bounties, sufficient to pay the cost of transportation, so that the cottons of Moscow and Nijni-Novgorod are sold in Kashgarie at the same price at which they are delivered from the manufacturers. Under such conditions it is evident the Anglo-Indian merchants can not compete, and the Government of India will, it is probable, take steps to aid them. The building of the trans-Caspian railway along the northeastern districts of Persia has been of the greatest advantage to Russia.

POPULATION OF RUSSIA BY CENSUS OF 1897.

According to the census of 1897, the population of the whole Russian Empire is 129,211,113, of which there are 64,616,280 males and 64,594,833 females. The following table shows the population by separate territories of the Empire.

TERRITORIES.	Males.	Females.	Total.	Inhabitants per square verst. (a)
In 50 governments of European Russia.....	46,433,636	47,755,114	94,188,750	22.2
In 10 governments of the Kingdom of Poland.....	4,753,879	4,688,711	9,442,590	84.6
In 11 governments and regions of Caucasus.....	5,129,931	4,593,622	9,723,553	23.6
In 8 governments and regions of Siberia.....	2,959,557	2,772,175	5,731,732	50.5
In 3 regions of Turkestan and trans-Caspian region.....	2,281,340	1,893,761	4,175,101	3.9
In 5 regions of steppes.....	1,803,560	1,611,614	3,415,174	1.6
In the Grand Duchy of Finland.....	1,250,426	1,277,375	2,527,801	8.8
Russian subjects in Buhara and Khiva.....	3,951	2,461	6,412
Total.....	64,616,280	64,594,833	129,211,113	6.8

a 1 square verst=0.43916 square mile.

b The whole of Asiatic Russia, if the trans-Ural districts of Perm and Orenburg governments are added thereto, contains 15,500,000 inhabitants.

This census shows 19 cities containing over 100,000 inhabitants each, 35 cities from 50,000 to 100,000, 69 cities from 25,000 to 50,000, 13 cities from 10,000 to 25,000, and 3 cities from 5,000 to 10,000.

The following table shows all the cities containing above 50,000 inhabitants:

CITIES.	Population.	CITIES.	Population.
St. Petersburg	1,267,023	Jaroslav	70,610
Moscow	988,610	Kherson	69,219
Warsaw	614,752	Orel	68,558
Odessa	404,651	Vitebsk	66,143
Lodz	314,780	Ekaterinodar	65,697
Riga	282,943	Zshitomir	63,452
Kiev	248,750	Revel	64,578
Kharkov	170,682	Liban	64,500
Tiflis	159,862	Belostok	63,927
Vilna	159,568	Namangan	61,906
Tashkent	156,506	Elisavetgrad	61,841
Saratov	133,116	Cronstadt	59,539
Kazan	131,518	Kremenchug	57,879
Ekaterinoslav	121,216	Tsaritsine	55,914
Rostoff on Don	119,889	Penza	53,680
Astrakhan	113,075	Samarcand	51,900
Baku	112,253	Kokand	54,452
Tula	111,048	Sebastopol	54,442
Kishinev	108,506	Berdichev	53,728
Nijni-Novgorod	98,503	Tver	53,477
Nikolaev (government of Kherson)	92,060	Poltava	53,060
Samara	91,659	Kursk	52,908
Minsk	91,113	Tomsk	52,430
Voronezh	84,015	Novocherkask	52,005
Kovna	73,543	Taganrog	51,748
Orenburg	72,740	Irkutsk	51,484
Dvinsk	72,231	Ufa	50,576

MONEY, WEIGHTS, AND MEASURES OF RUSSIA.

[From Statesman's Year-Book, 1899.]

MONEY.

The legal unit of money is the silver ruble of 100 kopecks. It is of the value of 3s. 2.054d., but in official calculations 6.40 rubles are taken as equal to the pound sterling.

Gold coins are the imperial and half imperial of 10 and 5 rubles. The half imperial weighs 6.544041 grammes 0.916 fine, and contains, therefore, 5.998704 grammes of fine gold. Its value, in paper rubles, for the year 1896, has been settled at 7r. 72c., and 15r. 45c. for the imperial. The new imperial weighs 12.902 grammes 0.900 fine, and consequently contains 11.6118 grammes of fine gold. Its value, in paper rubles, has been settled by the ministry of finance, for the year 1896, at 15 rubles for the imperial, and 7r. 50c. for the half imperial. The ratio between gold and paper currency is thus established for the year 1896 at $1\frac{1}{2}:1$.

According to the new laws of January 3 (15), and August 2 (September 10), 1897, new gold coins of exactly the same value, weight, and dimensions as the above will henceforward be coined bearing the inscription of 15 rubles on the imperial, 7r. 50c. on the half imperial, and 5 rubles on a new gold coin of this value, and paper money can at any time be exchanged at its nominal value against these gold coins.

The silver ruble weighs 20.7315 grammes 0.86896 fine, or (in the new coinage) 19.9957 grammes 0.900 fine, and consequently contains 17.994 grammes of fine silver. Besides the silver ruble, credit notes (100, 25, 10, 5, 3, and 1 ruble) are legal tender.

WEIGHTS AND MEASURES.

1 verst (500 sajènes)	= 3,500 feet, or two-thirds of a statute mile (0.6629).
1 sajène (3 arshines)	= 7 feet English.
1 arshine (16 vershok)	= 28 inches.
1 square verst	= 0.43941 square mile.
1 dessiatine	= 2.69972 English acres.
1 pound (96 zolotniks = 32 lot)	= $\frac{1}{16}$ of a pound English (0.90283 pound).
1 pood (40 pounds)	{ = 36 pounds English.
	{ = 0.32244 cwt.
63 poods	= 1 ton.
1 ship last	= about 2 tons (1.8900).
1 vedro (8 shetffs)	= $2\frac{1}{2}$ imperial gallons (2.707).
1 tchetvert (8 tchetveriks)	= 5.77 imperial bushels, or $\frac{1}{16}$ imperial quarter (0.72186).

RUSSIAN TARIFF RATES ON PRINCIPAL ARTICLES IMPORTED.

The Russian tariff on the principal articles of importation, and especially those likely to be demanded from the United States, are given by Consul-General Karel, in a statement published in the United States Consular Reports in June, 1897.

The Russian custom-houses, he says, are classified according to the powers conferred on them relative to the importation of goods and the collection of duties, as follows: Principal customs warehouses; custom-houses of the first, second, and third classes; tollhouses; and posts situated on frontier passes. The principal customs warehouses are authorized to sanction the entry of all kinds of foreign goods (except those prohibited), for clearance or for shipment in transit. Goods may be stored in customs warehouses for a period not exceeding three years before the payment of the duties thereon or before their reshipment to a foreign country. Principal customs warehouses are established at Batoum, Irkoutsk, Kharkov, Libau, Moscow, Odessa, Revel, Riga, St. Petersburg, Taganrog, Tiflis, and Warsaw. In the custom-houses of the first class, the import duties must be paid within one year from the date of the entry of the goods. Import duties on foreign goods which are allowed to be cleared by custom-houses of the second class must be paid within two months from the date of entry. Those goods referred to are tea, wine, alcoholic beverages, sugar (raw and crushed, in loaves and lumps), colors, pharmaceutical products, articles of gold and silver (which must be stamped at the assayer's office), smoking tobacco, snuff, and cigars. The custom-houses of the third class have the same powers as those of the second, except as regards the importation of machines other than agricultural. The import duties in these custom-houses must be paid within a month. Tollhouses can clear only goods exempt from duty, with the exception of machines and apparatus, cereals and flour, and wines proceeding from Austria-Hungary. Customs posts situated on frontier passes are not open for the importation of foreign goods. All duties are collected in gold. One gold ruble has 100 copecks, and equals 77.2 cents (United States).

The following is a table of customs duties:

1 pood = 36.112 pounds. 1 funt = 0.90282 pound.

KINDS OF GOODS.	Unit.	Rate.	
		Rubles.	Dollars.
Rice:			
Husked.....	Per pood.....	0.70	0.54
Unhusked.....	do.....	.40	.3088
Nuts (wood and garden nuts of all kinds excepting those specially mentioned).....	do.....	1.00	.772
Tobacco:			
In leaves, bundles, with or without stalks, and tobacco stalks.....	do.....	15.40	11.888
Cut smoking tobacco, snuff, and tobacco of all kinds in rolls, cakes, etc.....	Per funt.....	1.30	1.00½
Cigars, rolled from leaf, and cigarettes.....	do.....	3.20	2.47
Fruit and berries (fresh, salted, steeped, etc., of all kinds except those specially mentioned).....	Per pood, gross...	1.20	.9264
Meat (salted, smoked, or dried, and sausages).....	Per pood.....	1.00	.772
(All comestibles manufactured from the meat of swine are prohibited.)			
Cheese.....	do.....	5.40	4.1588
Hides, dressed:			
(1) Small—tanned, tawed, curried, or saturated with alum, chamois leather, calfskins, fishskins and skins of amphibious animals, and small tanned thongs for lacing the ends of machine belting.....	do.....	11.00	8.492
(2) Morocco leather, glazed leather, kid, and shagreen; all kinds of leather with impressed ornaments, and lacquered leather, small.....	do.....	12.75	9.843
(3) Large—ox, cow, horse, or pig skins, tanned, saturated with alum, or tawed, in whole or half skins; parchment.....	do.....	6.00	4.632
(4) Lacquered skins, large.....	do.....	7.22	5.5738
Manufactures of leather or skins:			
(1) Boots and shoes of all kinds (except those specially mentioned), finished or not.....	Per funt.....	1.00	.772
NOTE.—Leather or skins of all kinds, cut out for boots or shoes or small wares.....			
(2) Boots and shoes for women, of kid, finished or not.....	do.....	1.70	1.3124
(3) Gloves of any kind of leather.....	do.....	2.55	1.9686
NOTE.—Gloves cut out, but not sewn, pay duty at 1.50 rubles (\$1.058) per funt.....			
(4) Harness, with accessories; saddlers' work; riding whips made of small leather thongs.....	do.....	.55	.4246
(5) Valises, trunks, traveling bags, and sporting articles made of leather and of coarse tissue of hemp or jute; note and pocketbooks of leather; prepared leather for binding; all other articles of leather which are not specially mentioned, even with metallic parts or with parts of other materials, when not constituting fancy articles of leather.....	do.....	.70	.54
(6) Transmission belts for machinery, sewn or not; straps for weaving looms; small round transmission belts, whips, buckets, and other coarse leather ware.....	do.....	.20	.1544
Cast iron in pigs, scrap, and filings:			
(1) Of all kinds, with the exception of those specially mentioned—			
(a) Imported by sea.....	Per pood.....	.30	.2316
(b) Imported over the western land frontier.....	do.....	.35	.27
(2) Maganese, silicium, and chrome.....	do.....	.50	.386

KIND OF GOODS.		Unit.	Rate.	
			Rubles.	Dollars.
Wrought iron:				
(1) In bars, horseshoe iron of all kinds, except that mentioned below; pigs, puddled blooms, scrap, and mill bars; iron in powder.	Per pood.....		0.60	0.4632
(2) Iron rails, perforated or grooved.....	do.....		.60	.4632
(3) Sheet iron of all kinds up to No. 25, inclusive (Birmingham gauge; in plates exceeding 18 inches in width; horseshoe iron of all kinds, of a width or height exceeding 18 inches, and of thickness or diameter of 7 inches or more (T, TT iron, beams, and Z iron, figured iron, with the exception of angle iron entering in section 1 of the present number); hoop iron of a width or diameter of more than one-fourth to one-half of an inch, inclusive.	do.....		.85	.6562
(4) Sheet iron above No 25.....	do.....		1.00	.772
Steel:				
(1) In bars and horseshoe steel of all kinds, except that mentioned below; steel in pigs and in scrap.....	do.....		.60	.4632
(2) Steel rails, even perforated or grooved.....	do.....		.60	.4632
(3) Sheet steel of all kinds, up to No. 25, inclusive; in plates exceeding 18 inches in width; horseshoe steel of all kinds, of a width or height exceeding 18 inches, and of a thickness or diameter of 7 inches or more (T, TT steel, beams, and Z steel, figured steel, with the exception of the angle steel entering in section 1); hoop steel of a width or diameter of more than one-fourth to one-half of an inch, inclusive.	do.....		.85	.6562
(4) Sheet steel above No. 25.....	do.....		1.00	.772
NOTE.—Steel of a width or diameter of one-fourth of an inch or less pays duty of 1 ruble (77.2 cents) per pood.				
Lead:				
(1) In pigs and scrap; litharge, white litharge, scorix, or dross of lead.....	do.....		.10	.0772
(2) In rolls, sheets, wire, and piping.....	do.....		.30	.2316
(3) Type metal (alloy of lead and antimony) unwrought.....	do.....		.20	.1544
Cast-iron wares:				
(1) Castings, rough.....	do.....		.68	.525
(2) Vessels of cast iron, enameled.....	do.....		1.00	.772
(3) Cast-iron wares, filed, polished, turned, painted, bronzed, tinned, varnished, enameled (except vessels), coated with zinc or other common metals, even combined with wood, copper, or its alloys.	do.....		1.53	1.1812
NOTE.—Section 3 of the present section applies to all articles in malleable cast iron, rough, as well as those worked, if the latter weigh more than 5 funts each; worked articles of malleable cast iron, weighing 5 funts or less each pay duty of 2.70 rubles (\$2.0844) per pood.				
Manufactures of iron and steel, forged, stamped, or cast, not filed, or filed on the sides and edges only, but not otherwise wrought, except those specially mentioned; forged nails.	do.....		1.70	1.3124
Iron and steel boiler work, such as boilers, reservoirs, tanks, cases, bridges, pipes, as well as all articles of sheet iron or steel, with the exception of those specially mentioned.	do.....		1.70	1.3124
Manufactures of iron and steel not specially mentioned, shaped, turned, polished, cut, bronzed, or otherwise worked, combined or not with wood, copper, or its alloys, weighing:				
(1) More than 5 funts each.....	do.....		1.70	1.3124
(2) 5 funts or less each.....	do.....		2.70	2.0844
(3) Padlocks and other locks, except those of brass; also wood screws.....	do.....		4.00	3.088
Wire:				
(1) Of iron or steel—				
(a) Of a thickness or diameter of from one-fourth of an inch up to No. 25, inclusive (Birmingham gauge).....	do.....		1.00	.772
(b) Exceeding No. 25 and up to No. 29, inclusive.....	do.....		1.50	1.058
(c) Finer than No. 29.....	do.....		2.00	1.544
(2) Of copper or alloys of copper, or of all kinds of alloys of common metals—				
(a) Of a thickness or diameter of from one-fourth of an inch up to No. 25, inclusive; telegraph wires of all kinds.....	do.....		4.00	3.088
(b) Exceeding No. 25 up to No. 29, inclusive.....	do.....		5.00	3.86
(c) Finer than No. 29.....	do.....		6.00	4.632
NOTE.—Wire coated with tin, zinc, or other common metals pays duty according to the corresponding sections of the present section, with an addition of 50 per cent.				
Manufactures of wire:				
(1) Of iron or steel—				
(a) Of all kinds, except those specially mentioned.....	do.....		3.20	2.47
(b) Fillets of cards and cards of all kinds.....	do.....		3.52	2.7174
(2) Of copper or its alloys—				
(a) Of all kinds, except those specially mentioned.....	do.....		6.00	4.632
(b) Wire gauge, containing in the length of 1 inch 24 threads and more; wire covered with textile materials or with gutta-percha.	do.....		9.00	6.948
NOTE.—Wire covered with silk, even if mixed with other textile materials, pays 20 per cent in addition to the duty stipulated in section 2 (b).				
(3) Wire nails, shoemakers' nails, upholsterers' nails, horseshoe nails, nails of malleable cast iron, and rivets; pegs for pianos.	do.....		2.43	1.8759
Needles of iron and steel:				
(1) Sewing, and other needles, except those mentioned below.....	Per funt.....		.65	.5018
(2) Knitting, packing, saddlers', harness makers' and sailmakers' needles; bodkins.....	do.....		.30	.2316
Cutlery:

NOTE.—The above rates have in certain instances been modified by the recent removal or reduction of duties on agricultural machinery, for details of which see article on page 2532.

THE RUSSIAN MERCHANT MARINE.

[From United States Consular Reports, 1898.]

The Russian merchant-marine fleet consisted on January 1, 1897, of 2,774 vessels of 577,207 tonnage, against 2,657 vessels of 528,988 tonnage on January 1, 1896. In that number there are 567 steam vessels of 240,957 tonnage and 2,207 sailing vessels of 336,250 tonnage.

They are divided as follows:

SEAS.	STEAM VESSELS.		SAILING VESSELS.		GRAND TOTAL.	
	Number.	Tonnage.	Number.	Tonnage.	Number.	Tonnage.
White Sea	33	4,449.41	357	19,667.66	390	24,117.07
Baltic	87	18,134.51	552	75,560.10	639	93,694.61
Black and Azov seas	257	135,639.80	775	55,600.29	1,032	191,240.09
Caspian Sea	190	82,733.36	523	185,421.95	713	268,155.31
Total in 1896	567	240,957.08	2,207	336,250	2,774	577,207.08
Total in 1895	522	205,048.89	2,135	323,339.07	2,657	528,987.96

The following table shows the movement of all merchant vessels, home and foreign, in all of the Russian ports during 1896, as compared with 1895:

a Exclusive of transfers from one Russian line to another.

The considerable surplus of 1896 is due to the transfer of 35,300,000 rubles from special accounts to the treasury.

On January 1, 1897, the net of railways belonging to the State attained 17,009 English miles, out of which 16,493 miles (66 per cent of all the railway net of the Empire) were under State management, and 516 miles were rented by the State to private companies.

TRAFFIC ON RIVERS OF EUROPEAN RUSSIA, EXCLUSIVE OF POLAND, FINLAND, AND CAUCASIA, IN TONS.

[From Statesman's Year-Book, 1899.]

YEAR.	Total.	Corn.	Firewood.	Timber.	Naphtha.
1891.....	16,710,000	1,996,000	3,705,000	6,470,000	1,153,000

POPULATION OF RUSSIA AT SELECTED PERIODS FROM 1722 TO 1897.

YEAR.	Population.	YEAR.	Population.
1722.....	14,000,000	1815.....	45,000,000
1742.....	16,000,000	1835.....	60,000,000
1762.....	19,000,000	1851.....	68,000,000
1782.....	23,000,000	1859.....	74,000,000
1796.....	36,000,000	1897.....	129,000,000
1812.....	41,000,000		

ETHNICAL COMPOSITION OF THE POPULATION OF RUSSIA.

[From Statesman's Year-Book, 1899.]

GROUPS OF PROVINCES.	Population.	Great Russians.	Little Russians.
Northern and Baltic.....	6,572,000	3,600,000	
Lithuania, White Russia, and Southwest Russia.....	a 19,719,000	200,000	8,810,000
Little Russia and Don.....	12,750,000	4,000,000	8,400,000
Central Russia.....	28,082,000	26,100,000	1,000,000
Volga Provinces.....	9,923,000	6,100,000	3,800,000
Northeast Russia.....	9,913,000	7,400,000	100,000
Southern Provinces.....	8,222,000	1,300,000	4,300,000
European Russia.....	91,081,000	b 49,700,000	26,400,000
Caucasia, about.....	9,724,000	3,000,000	
Siberia, about.....	5,731,000	5,000,000	
Turkestan, Transcaspian, and Kirghiz Steppes, about.....	7,590,000	1,000,000	

a 6,800,000 White Russians. b 7,000,000 White Russians.

For other ethnical elements of the population, see Year-Book, 1885, p. 416.

The populations of the Caucasus appear as follows, according to recent investigations:

Russians.....	1,915,614	Kartvelians:	
Poles.....	8,910	Georgians.....	310,499
Germans.....	23,613	Mingrelians.....	200,092
Greeks.....	42,562	Imeretes.....	373,141
Iranians:		Psbaves, Khevsurs.....	20,979
Ossets.....	127,430	Western Mountaineers.....	188,083
Persians, Tatis, Talyshins.....	132,792	Eastern Mountaineers.....	707,619
Kurds.....	10,097	Tartars.....	1,027,828
Armenians.....	803,696	Turks.....	75,980
Jews.....	50,992	Turcomans, etc.....	44,046
Kalmuks.....	10,707	Northern Tartars.....	126,000

The chief nationalities of trans-Caucasia were as follows in 1886-90:

Russians.....	140,095	Mingrelians.....	214,601
Greeks.....	57,156	Aphasians.....	29,260
Kurds.....	97,499	Svanetes.....	14,035
Ossets.....	76,130	Samurzakanes.....	27,247
Armenians.....	965,167	Turcomans.....	10,174
Jews.....	33,663	Turks.....	75,863
Georgians.....	400,487	Tartars.....	1,107,232
Imeretes.....	419,967	Tatis.....	124,693
Gurians.....	74,171	Talyshins.....	88,449
Ajares.....	59,495		

The remaining nationalities number less than 10,000 each.

SCHOOLS IN RUSSIA.

1896.....			491										6,257	

a From the Russian official mining report, "Sbornik Statisticheskikh Svedeniye o Gornozavodskoi Promyshlennostiye Rossie v Zavodskom Godu," St. Petersburg.

b In the Russian reports the quantities are stated in poods and the values in silver rubles. In making the reductions the following relations were employed: 1 pood=.01638 metric ton; 1 silver ruble=40 cents.

MINERAL IMPORTS OF RUSSIA (a) (IN METRIC TONS AND DOLLARS).

[1 pood=0.1638 metric ton; 1 ruble = 40 cents.]

O. P. Austin

Chief of Bureau.

TREASURY DEPARTMENT,
Bureau of Statistics.

No. 11. SERIES 1898-99.

MONTHLY SUMMARY
OF
COMMERCE AND FINANCE
OF THE
UNITED STATES.

MAY, 1899.

CORRECTED TO JUNE 28, 1899.

PREPARED IN
THE BUREAU OF STATISTICS,
TREASURY DEPARTMENT.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1899.

EXPLANATIONS OF REGULAR STATISTICAL TABLES.

General imports.—The regular statement of imports of merchandise by articles and countries in this publication is what is termed the statement of *general imports*, embracing imported articles entered for immediate consumption on arrival, and articles entered for warehouse, as distinguished from special imports, which embrace imports entered for immediate consumption and withdrawals from warehouse for consumption.

The statement of *general imports* and the statement of *imports entered for consumption* for any period will differ to the extent that the value of *entries for warehouse* for the period differs from the value of *withdrawals from warehouse for consumption*. The term "*entry for consumption*" is the technical name of the import entry made at the customhouse, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion.

The values of articles imported since August 1, 1890, are governed by the provisions of section 19 of the act of June 10, 1890, which prescribes that the values of imported merchandise subject to ad valorem rates of duty shall be "the actual market value or wholesale price of such merchandise as bought and sold in usual wholesale quantities at the time of exportation to the United States in the principal markets of the country from whence imported and in the condition in which such merchandise is there bought for exportation to the United States or consigned to the United States for sale, including the value of all cartons, cases, crates, boxes, sacks, and coverings of any kind, and all other costs, charges, and expenses incident to placing the merchandise in condition ready for shipment to the United States."

Domestic exports.—The regular statement of domestic exports by articles and countries in this publication exhibits the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and articles, utensils, etc., made from imported materials. The value of exports of domestic merchandise is their value at the time of exportation in the ports of the United States whence they are exported.

Foreign exports.—The regular statement of foreign exports by articles in this publication, sometimes called "reexports," exhibits exports of foreign merchandise which had been imported. The value of such commodities exported "from warehouse" is their import value; the value of such commodities exported "not from warehouse" comprising free goods mainly, is the value at the ports of the United States whence they are exported.

Warehoused merchandise.—The regular statement of articles remaining in warehouse in this publication exhibits imported merchandise in bonded warehouses. This merchandise has already appeared in the statement of *general imports*. The official values of the articles therein represented are the same as the *import values*.

Tonnage tables.—In the tables of tonnage movement, in American foreign trade the tonnage is stated in net tons, of 100 cubic feet carrying space, after the prescribed allowances are made for crew space, engine space, etc.

Weights.—In all tables published by the Bureau the ton weight is 2,240 pounds and the hundredweight is 112 pounds, unless indicated otherwise.

Customs districts.—Statements of imports, exports, and tonnage movement are shown by customs districts, which have a certain prescribed limit of territory, with a port of entry. The customs districts having the port of entry with name different from that of the customs district are the following:

District.	Port of entry.	District.	Port of entry.	District.	Port of entry.

MISCELLANEOUS.

COMMERCE BETWEEN THE UNITED KINGDOM AND THE UNITED STATES:

Principal articles imported into and exported from the United Kingdom in its trade with the United States during the month and five months ending May 31, 1897, 1898, and 1899—

Imports from the United States	2755
Exports to the United States	2756

CONTENTS OF COMMERCE OF THE BRITISH WEST INDIES, ETC.

General discussion of population, area, and commerce of British Indies	2761
Barbados; population, area, production, and commerce	2762
Jamaica; population, area, production, and commerce	2762
Bahamas; population, area, production, and commerce	2763
Leeward Islands; population, area, production, and commerce	2764
Windward Islands; population, area, production, and commerce	2764
Trinidad; population, area, production, and commerce	2765
Bermudas; population, area, production, and commerce	2765
British Honduras; population, area, production, and commerce	2765
British Guiana; population, area, production, and commerce	2766
British West Indies; population and production of, present business conditions, etc	2766

TABLES.

Population, area, and commerce of British American countries south of United States	2768
Imports (total value) into British possessions south of United States, 1887 to 1897	2769
Imports from United Kingdom into British possessions south of United States, 1887 to 1897	2769
Exports (total value) from British possessions south of United States, 1887 to 1897	2770
Exports to United Kingdom from British possessions south of United States, 1887 to 1897	2770
Commerce (total value) between United States and British possessions south of United States, 1889 to 1898	2771
Jamaica; commerce with principal countries, 1896, 1897, and 1898	2772
Trinidad; commerce with principal countries, 1895, 1896, and 1897	2772
Barbados; commerce with principal countries, 1895, 1896, and 1897	2772
British Guiana; commerce with principal countries, 1896, 1897, and 1898	2773
Commerce of United States with Bermuda, 1891 to 1898	2774
Commerce of United States with British Honduras, 1821 to 1898	2774
Commerce of United States with British West Indies	2776
Commerce of the United States with British Guiana, 1833 to 1898	2776
Gold and silver, movement of, between United States and British possessions south of United States	2778
Bermuda, imports from and exports to United States, by articles, 1892 to 1898	2780
British Honduras, imports from and exports to United States, by articles, 1879 to 1898	2781
British West Indies, imports from and exports to United States, by articles, 1871 to 1898	2783
British Guiana, imports from and exports to United States, by articles, 1873 to 1898	2790
Barbados, imports of principal articles, by quantities and values, 1890 to 1897	2792
Barbados, exports of principal articles, by quantities and values, 1890 to 1897	2793
Barbados, imports from principal countries, 1890 to 1897	2793
Barbados, exports to principal countries, 1890 to 1897	2793
Jamaica, imports of principal articles, by quantities and values, 1891 to 1898	2794
Jamaica; exports of principal articles, by quantities and values, 1891 to 1898	2795
Jamaica; imports from principal countries, 1891 to 1898	2795
Jamaica; exports to principal countries, 1891 to 1898	2795
Trinidad; imports of principal articles, by quantities and values, 1890 to 1897	2796
Trinidad; exports of principal articles, by quantities and values, 1890 to 1897	2796
Trinidad; imports from principal countries, 1890 to 1897	2797
Trinidad; exports to principal countries, 1890 to 1897	2797
British Guiana; imports from principal countries, by quantities and values, 1890 to 1898	2798
British Guiana; exports to principal countries, by quantities and values, 1890 to 1898	2798
British Guiana; imports from principal countries, 1890 to 1898	2799

British Guiana; exports to principal countries, 1890 to 1898	Page. 2799
United Kingdom, imports into, from British West Indies	2800
United Kingdom, exports from, to British West Indies	2800

CONTENTS OF THE EXPORTS OF THE PRODUCTS OF DOMESTIC MANUFACTURE, ETC.

Exportation of domestic manufactures from the United States, 1889-1898	2805
Iron and steel	2806
Chemicals and patent medicines	2808
Clocks and watches	2809
Copper, and its manufactures	2809
Textile manufactures	2809
Boots and shoes	2809
Scientific instruments	2809
Illuminating oils	2810
A general advance in exportation of manufactures	2810

TABLES.

Imports and exports of manufactures, 1888-1898	2810
Exports of principal articles of domestic manufacture, 1868, 1878, 1888, and 1898	2811
Exports of manufactures, by principal classes of articles	2812
Exports of domestic merchandise, by groups, 1860-1898	2813
Exports of domestic manufactures from principal commercial countries, 1887 to 1898	2814
Exports of domestic manufactures from the United States by articles and countries	2814
Mowers and reapers	2814
Plows and cultivators	2815
Other agricultural implements	2816
Art works	2818
Blacking	2819
Books, maps, engravings, etc	2820
Bricks	2823
Brooms and brushes	2824
Candles	2826
Carriages, cars, and other vehicles	2827
Cycles and parts of	2828
Celluloid manufactures	2833
Chemicals, drugs, and dyes	2834
Clocks and watches	2840
Coffee and cocoa	2843
Copper, manufactures of	2844
Cotton, manufactures of	2846
Earthen, stone, and china ware	2852
Fertilizers	2854
Fibers, manufactures of	2855
Glass and glassware	2860
Gunpowder	2863
India rubber, and manufactures of	2865
Ink, printers' and other	2868
Instruments and apparatus for scientific purposes	2871
Iron and steel, and manufactures of	2872
Jewelry, and manufactures of gold and silver	2918
Lamps, chandeliers, etc	2919
Lead, and manufactures of	2920
Leather, and manufactures of	2923
Lime and cement	2932
Malt liquors	2933
Marble and stone, manufactures of	2935
Matches	2937
Musical instruments	2938
Oils, refined or manufactured	2942
Paints, pigments, and colors	2950
Paper, and manufactures of	2951
Paraffin and paraffin wax	2955
Perfumery and cosmetics	2956
Plated ware	2958
Silk, manufactures of	2959
Soap	2960
Spirits, distilled	2962

Starch	Page.
Stationery, except of paper	2968
Stereotype and electrotype plates	2969
Straw and palm leaf, manufactures of	2971
Sugar	2972
Tin, manufactures of	2973
Tobacco and manufactures of	2975
Toys	2976
Trunks, valises, and traveling bags	2981
Varnish	2982
Wood	2984
Wool	2987

a Includes gold and silver in ore.

NOTE.—Gold and silver can not be separately stated in domestic exports before 1864, but it is probable that the greater portion of the exports was gold.

VALUE OF CARRYING TRADE FOR THE MONTH OF MAY, 1898 AND 1899.
Distribution, by Flag of Carrying Vessel, of the Value of Imports and Exports of Merchandise.

THE WEST INDIA ISLANDS

and adjacent territory
showing
British Possessions South
of the
UNITED STATES.

British Possessions.

COMMERCE
OF
THE BRITISH WEST INDIES
AND
OTHER BRITISH POSSESSIONS IN AMERICA
SOUTH OF THE UNITED STATES.

THE BRITISH WEST INDIES AND OTHER BRITISH POSSESSIONS IN AMERICA SOUTH OF THE UNITED STATES.

POPULATION, AREA, PRODUCTION, CONSUMPTION, IMPORTS AND EXPORTS, AND THE SHARE OF EACH COUNTRY IN THEIR COMMERCE.

The fact that a reciprocity agreement intended to bring a portion of the British West Indies into closer commercial relations with the United States has just been signed, and that others of that group of islands are suggesting similar arrangements, seems to justify a presentation of some facts regarding the people, productions, and purchases of those islands.

Stretching in a great semicircle from the southern coast of Florida in North America to the eastern coast of Venezuela in South America, lies a chain of islands numbering hundreds, having an area of nearly 100,000 square miles, a population of 6,000,000, and a commerce of over \$250,000,000 annually. While the events of the past year have brought the most important of these—Cuba and Porto Rico—into closer relations with the United States, these events were quickly followed by suggestions for closer commercial relations on the part of others of the group, which naturally look to the United States as the nearest market in which to dispose of their products and from which to obtain their supplies.

In this great chain of islands connecting continent with continent, Great Britain controls by far the largest number. The Bahamas, which stretch southeastwardly from Florida almost to Porto Rico, with 20 inhabited and scores of uninhabited islands, have been under British control since 1718, and at the close of the Revolutionary war became the home of many families of English loyalists from the south of the United States. The Virgin group, just east of Porto Rico, is partly under the control of Great Britain. The long line of islands stretching southwardly from Porto Rico to the northeast coast of South America, touching British Guiana on the mainland, are mostly under the control of the United Kingdom, while Jamaica and the Cayman Islands, lying south of Cuba, and British Honduras, on the adjacent mainland of Central America, are likewise a part of "Greater Britain." Thus the large proportion of the semicircle of islands swinging from the coast of Central America past the southern point of Florida to the northeastern point of South America, omitting Cuba and Porto Rico, are under British control.

The British colonies thus lying commercially adjacent to the United States at the south, including those upon the mainland of Central and South America, have an area of over 125,000 square miles and a population of nearly 2,000,000. Their purchases from abroad amount annually to nearly \$40,000,000 in value and their exports to about a like sum. Their productions are mostly sugar, tropical fruits, coffee, cacao, and fibers, of which the United States is a large importer, while their purchases are chiefly breadstuffs, clothing, manufactured goods, mineral oils, coal, lumber, and other articles, of which we are large exporters. At present our sales to them amount to about \$12,000,000 per annum, or about 30 per cent of their total imports, while our imports from them amount to about \$15,000,000 annually, or nearly 40 per cent of their total exports.

While the abolition of slavery in the British West Indies in 1834, in the French West Indies in 1848, in Porto Rico in 1873, and in Cuba in 1885, followed by the development in Europe of beet-sugar production and exportation, reduced the area devoted to sugar growing in the West Indies, it at the same time increased the variety of the tropical products which they have to offer in exchange for the food stuffs, clothing, and manufactures which they annually purchase from the temperate zone.

In the statements which follow the area, population, production, imports, exports, and general commercial conditions in each of the more important of the British colonies lying south of the United States are given, followed by some general tables showing their imports and exports for a term of years, and the share which each country has had in their commerce during that time, and especially the commerce between them and the United States.

BARBADOS.

The island of Barbados, with whose government a reciprocity treaty has already been signed, lies on the east of a chain of islands which stretches southwardly from Porto Rico to the coast of South America, and which geographers divide into "Windward" and "Leeward" groups. Its population is, according to the Statesman's Year-Book of 1899, about 190,000; its area about 166 square miles, and the area under cultivation about 100,000 acres. The staple product of the island is sugar, about 30,000 acres being annually planted with the sugar cane, which yielded in 1897 58,600 hogsheads of sugar, as against 36,451 in 1895 and 49,399 in 1896. There are 441 sugar works and 9 rum distilleries. Sugar is the chief export, though 1,880 tons of "manjak" or "glance pitch"—a bituminous petroleum for fuel—were exported in 1897. In the exports of that year were 56,397 hogsheads of raw sugar, valued at \$2,058,417; 2,203 hogsheads of other sugar, valued at \$120,426; 37,432 puncheons of molasses, valued at \$418,976; 45,449 quintals of dried fish, valued at \$222,502, and considerable quantity of coal, corn, flour, and manufactured articles, much of which was apparently imported into Barbados, and distributed thence to others of the West India group. The imports included 3,947,761 pounds of bread and biscuits, 770,280 pounds of butter and compounds, 19,749 tons of coal and coke, 304,973 bushels of corn and other grain, 46,688 barrels of Indian corn-meal, 55,089 barrels of flour, 83,453 quintals of dried fish, \$221,620 value of hardware and metals, \$657,522 value of linen and cotton goods, 9,516,281 feet of lumber, 2,891,430 pounds of salted or pickled meat, 4,582,858 pounds of oil meal and oil cake, 9,211,785 pounds of rice, 1,649,968 staves and shooks, the total valuation of the year's imports being \$4,908,833. Of the \$4,908,833 importations of the year, \$2,309,577 came from the United Kingdom, \$529,645 from North America, \$1,566,564 from the United States, and the remainder from British India, British West Indies, British and Dutch Guiana, and Peru; while of the year's exports, which amounted to \$3,582,537 in value, \$2,080,535 in value were sent to the United States.

Facilities for the satisfactory transaction of business in Barbados include a colonial bank, with a paid-up capital of £600,000, having a circulation of \$1,985,097. The government savings bank has 12,278 depositors and deposits amounting to £213,984. The chief city, Bridgetown, has a population of 21,000, with three daily newspapers, two weekly, two biweekly, and two monthly. The registered shipping in 1897 consisted of 48 sailing vessels and 2 steamers; total net tonnage, 7,105 tons. There are upon the island 24 miles of railroad, 470 miles of wagon roads, 24 miles of telegraph line, 35 miles of police telephone lines, and 600 miles of private telephone line, which supplies 466 services. Barbados is a station of the West Indian and Panama Telegraph Company.

The government is administered by a governor appointed by the Crown, in conjunction with an executive council, executive committee, legislative council of 9 members, and a house of assembly of 24 members, the latter being elected annually by the people. The number of voters in 1897 was 2,208. Barbados is the central point for steamship lines both between the United States and South America and between European and Asiatic points on the east and Central American ports at the west. From New York to Barbados the distance is 1,820 miles; from Barbados to Georgetown, British Guiana, 335 miles; from Barbados to Santiago, Cuba, 1,050 miles; to Porto Rico, 449; to Liverpool, 3,705, and to Pernambuco, 2,184 miles.

JAMAICA.

Jamaica, the largest of the British West India islands, lies 90 miles south of Cuba and 100 miles west of Haiti; has an area of 4,200 square miles and a population of 706,394. The total number of acres under cultivation and care in 1897 was 663,560, of which, however, 498,916 was under pasture. Of this area 28,764 acres was devoted to sugar cane, 22,387 to coffee, 19,760 to bananas, 10,799 to cocoanuts, 245 to corn, 1,611 to cacao, 80,656 to ground provisions, and 962 to pimento. The holdings are classified as follows: Not exceeding 1,500 acres, 214 holdings; not exceeding 1,000 acres, 149 holdings; not exceeding 800 acres 285 holdings; not exceeding 500 acres, 578 holdings; not exceeding 200 acres, 569 holdings; not exceeding 100 acres, 848 holdings; not exceeding 50 acres, 2,536 holdings; not exceeding 20 acres, 4,347 holdings; not exceeding 10 acres 8,021, and not exceeding 5 acres, 58,789 holdings. The tillable soil of Jamaica has, since the abolition of slavery, passed to a great extent from the hands of large holders to those of small owners, and the productions have at the same time been greatly diversified, coffee, bananas, cocoanuts, and cacao having, in many cases, occupied the area formerly devoted to sugar cane.

Business facilities include a colonial bank with a circulation of \$1,985,097 and assets of \$17,993,644. The government savings bank has 30,660 depositors with deposits amounting to 468,199 pounds sterling. The local cur-

rency is that of Great Britain, but various American coins are also current, as are likewise notes of the colonial bank, whose average total circulation in 1896 was 173,650 pounds sterling. The registered shipping of Jamaica consists of 124 sailing vessels of 6,694 tons and one steamer of 459 tons. The railway in operation has a length of 185 miles; passengers carried in 1898, 356,949; miles of telegraph in operation, 937; telephone lines in operation, 831 miles; telegraph messages sent in 1898, 87,545; letters and postal cards passing through the post-office in 1896-97, 4,955,712. Turks and Caicos islands, which are geographically a part of the Bahamas, are under the political control of Jamaica. The government of Jamaica is administered by a commissioner, appointed by the Crown, assisted by a legislative board of five members, which is also appointed by the Crown. The governor of Jamaica has supervisory power over the local government. The legislative assembly is partly nominated and partly elected, and there are boards elected in each of the fourteen parishes for the administration of local affairs. Incidentally it is interesting to observe, as indicating the system of the British Government in reference to the compensation of its officials, that the salary of the governor of Jamaica, Sir Augustus Hemming, K. C. M. G., is 5,000 pounds sterling per annum, or \$24,333.

Jamaica was discovered by Columbus on May 3, 1494, taken possession of by the Spaniards in 1509, but taken in 1655 by a British expedition sent out by Cromwell, which, after an unsuccessful attempt to capture the island of San Domingo, seized Jamaica, which has since been held by the British Government, having been formally ceded to England in 1670 by the treaty of Madrid.

The products of Jamaica are, besides tropical fruits, dyewoods, cabinet woods, spices, and other valuable tropical products. The coffee raised in certain districts of the Blue Mountains brings, it is said, the highest price paid for coffee in the London market. The exports from Jamaica in the year 1897-98 included 85,410 hundredweight of coffee, 445,866 pounds sterling value of bananas, 11,533,726 cocoanuts, 88,013,091 oranges, 1,408,166 pounds of ginger, 1,379,278 gallons of rum, 284,375 hundredweight of raw sugar, 42,600 tons of logwood, and 38,828 hundredweight of pimento. The total value of the exports of 1897-98 was 1,448,443 pounds sterling, and of the imports 1,666,667 pounds sterling. The imports included 32,657 hundredweight of bread and biscuit, 7,898 hundredweight of butter and compounds, 56,628 tons of coal and coke, 300,401 bushels of corn, 37,083 barrels of meal, 208,317 pounds sterling value of cotton manufactures, 118,612 hundredweight of dried or salted fish, 147,616 barrels of flour, 28,424 pounds sterling value of hardware and cutlery, 35,775 pounds sterling value of linen manufactures, millinery, and haberdashery, 9,501,664 feet of lumber, 8,511,978 pounds of rice, and 2,403,120 pounds of soap. Of the 1,666,667 pounds sterling value of importations in 1898, 776,889 pounds in value was from the United Kingdom, 719,768 pounds in value from the United States, 118,898 from British North America; while of the 1,448,443 pounds sterling value of exports in 1898, 313,853 pounds went to the United Kingdom and 902,932 pounds to the United States.

THE BAHAMAS.

The Bahamas, which stretch southeastwardly from the coast of Florida to the coast of Porto Rico, include 20 inhabited and many uninhabited islands. The area of inhabited and cultivable islands is 5,450 square miles. The most important of the islands is New Providence, containing the capital, Nassau, which was a point of very considerable importance during the civil war in the United States, becoming the headquarters for blockade runners carrying cotton from southern ports and cargoes of manufactures, war materials, etc., from European ports. The principal islands are New Providence, Abaco, Harbour Island, Great Bahama, St. Salvador, Long Island, Mayaguana, Eleuthera, Exuma, Watlings Island, Acklins Island, Crooked Island, Great Inagua, and Andros Island. The total population of the group is about 50,000, the figures at the latest official count in 1891 being 47,565. Sponge fishing is one of the most important industries, its product amounting in 1897 to nearly \$500,000 in value, while shells, pearls, and ambergris in considerable value were also obtained. Fruit culture is, however, increasing rapidly, pineapples and oranges being exported to the United States in considerable quantities, while sea island cotton and sisal are now being produced, over 20,000 acres having been devoted to sisal culture in 1893 in the belief that it can be successfully produced in competition with Mexico and Central America, from which the chief supplies of the United States are now drawn. The total land granted in the colony amounts to 347,976 acres. The exportation of pineapples in 1897 amounted to about \$120,000 in value, and the orange crop of 1897 was valued at \$16,500. The Government is administered by a governor appointed by the Crown, assisted by an executive council of 9 and a legislative council of 9 members, and a representative assembly of 29 members. Electors are required to have a small property qualification. Education is free, compulsory, and unsectarian.

The imports into the Bahamas in 1897 amounted to 186,010 pounds sterling; in 1896 to 194,774, and in 1890 to 222,512. The exports amounted in 1897 to 149,085 pounds sterling in value, in 1896 to 138,972, and in 1890 to 168,121.

THE LEEWARD ISLANDS.

The Leeward Islands are the northern section of the line of islands stretching from Porto Rico to the coast of South America, which geographers have arbitrarily divided into the Windward and Leeward groups. The Leeward Islands comprise Antigua, St. Kitts-Nevis, Dominica, Montserrat, and the Virgin Islands, which belong to the British Government, the entire Leeward group thus lying in comparatively close proximity to and immediately southeast of Porto Rico. The total area is 700 square miles; population 127,000. The chief products are sugar, molasses, coffee, cocoa, arrowroot, lime juice, pineapples, and cotton. There is direct steam navigation with the United States, Canada, and the United Kingdom. The government is administered by a governor and a commander in chief, and a colonial secretary appointed by the Crown. The group is divided into five presidencies, of which Antigua (with Barbuda and Redona) forms one, St. Kitts (with Nevis and Anguilla) another, and Montserrat, Dominica, and the Virgin Islands each a separate presidency. There is one federal executive council nominated by the Crown, and one federal legislative council, of which ten members are elected and ten nominated. Of the elective members, four are chosen by the local legislative council of Antigua and two by the council of Dominica, and four by the nonofficial members of the local legislative council of St. Kitts-Nevis. The federal legislative council meets annually. The exportations from the Leeward group amounted in 1897 to 339,918 pounds sterling in value, and their imports to 325,753 pounds sterling.

WINDWARD ISLANDS.

The Windward Islands compose the southern section of the line of islands stretching from Porto Rico to the coast of South America, but omitting Trinidad at the extreme southern terminus of the line, which has a separate form of government and is considered separately. The Windward Islands consist of Grenada, St. Vincent, the Grenadines, and St. Lucia, and form the eastern barrier to the Caribbean Sea between Martinique and Trinidad. The area of Grenada is 133 square miles; of St. Vincent, 132 square miles; of St. Lucia, 233 square miles. Of Grenada, over 20,000 acres were in 1897 returned as being under cultivation, of which 911 acres were sugar cane, 11,115 acres cocoa, 1,812 acres cotton, 1,343 acres spices, 58 acres coffee. The cultivation of sugar cane is decreasing, and that of cocoa and spices increasing. In the island of St. Vincent the products are sugar, rum, cocoa, spices, and arrowroot, about 13,000 acres being under cultivation. In St. Lucia the chief products are sugar, cocoa, rum, and logwood. There are Government savings banks, postal facilities, schools, etc., in each of the islands. The local currency is the British sterling and United States gold coins. The Colonial Bank issues five dollar notes to the extent of 9,800 pounds sterling in St. Lucia, 11,700 pounds sterling in Grenada, 8,000 pounds sterling in St. Vincent. The imports of the Windward group amounted in 1897 to 480,433 pounds sterling in value, and the exports to 377,641 pounds. The exportations consist exclusively of tropical products—fruits, spices, sugar, etc., while the importations include breadstuffs, provisions, and manufactures. The government of the group is administered by a governor and commander in chief appointed by the Crown and residing at St. Georges, Grenada. Each island has its own local government; there is no common legislature, laws, revenue, or tariff, though there is a common court of appeals, and the colonies unite for other common purposes.

TRINIDAD.

Trinidad is the most southerly of the line of islands stretching from Porto Rico to the coast of South America, and by reason of its area and importance is not included in either of the groups of Windward and Leeward, into which the line of islands is arbitrarily divided, this being also the case with the island of Barbados, which lies immediately east of the Windward group. Trinidad has an area of 1,754 square miles, and attached to it politically is the island of Tobago, with an area of 114 square miles. The population of Trinidad is 255,000; of Tobago, 20,785. Of the total area of 1,120,000 acres, about 443,000 acres have been alienated. Of this area, 57,000 acres is devoted to the production of sugar cane, 100,000 acres to cacao and coffee, 13,500 acres to ground provisions, and 14,000 acres to cocoanuts. The large pitch lake in the island, from which the asphalt used in pavements in the United States and elsewhere is largely obtained, is leased to an English company, and from it were exported, in 1897, 125,000 tons of asphalt. The island has 84 miles of railways, 690 miles of telegraph lines, a colonial bank with a note circulation of 150,000 pounds sterling, a government savings bank with 10,936 depositors and deposits amounting to 232,650 pounds sterling. In the island of Tobago, which was annexed to Trinidad in 1889, the culture of cotton, tobacco, and cocoa is receiving increased attention. The exports of Trinidad in 1897 amounted to £1,994,926 in value, of which £138,801 was asphalt, £695,690 cocoa, and £537,107 raw sugar. In quantities the exportations were: Asphalt, 125,000 tons; bitters, 40,145 gallons; cocoa, 27,889,347 pounds; molasses, 605,690 gallons; rum, 99,569 gallons; raw sugar, 982,377 hundredweight. The imports of 1897 amounted to £2,161,231 in value, of which £409,049 was included under the head of "Apparel, haberdashery, and textile manufactures;" £143,214, hardware and machinery; £40,347, leather and boots and shoes; £42,611, lumber; £46,781, meats; £124,026, rice, and £132,104 flour. In quantities the importations were: Coal, 9,097 tons; fish, 8,079,729 pounds; flour, 146,618 barrels; cattle, 7,299 head; lumber, 11,684,508 feet; meats, 4,972,024 pounds, and rice 20,179,343 pounds.

THE BERMUDAS.

The Bermuda Islands, while not usually considered a part of the West Indies, are sufficiently near in location to warrant consideration in this connection. The colony includes a group of 360 small islands, of which 20 are inhabited, lying 580 miles east of Cape Hatteras, and 667 miles southeast from New York. The total cultivable area is 12,000 acres, of which 4,000 is now under cultivation. The population, 16,098, includes 6,184 whites. The exports amounted in 1897 to 127,703 pounds sterling, and the imports 323,148 pounds sterling. Food supplies are mostly imported from the United States and Canada, and nearly all of the exports of Bermuda go to those two countries. The value of onions exported in 1897 amounted to £81,463, and of potatoes to £18,052. The total tonnage of vessels entering and clearing in the Bermudas in 1897 was 346,538 tons, of which 300,000 were British. A telegraph cable connects the islands with Halifax, Nova Scotia, and the mainland of the United States. The British forces on the islands amount to 3,178 troops. Bermuda is an important naval base on the North America and West India station, with dockyard, victualing establishment, etc.

The government is administered by a governor appointed by the Crown, who is also commander in chief of the military forces. He is advised by an executive council of 6 members, also appointed by the Crown. There is also a legislative council composed of 9 members appointed by the Crown and a representative house of assembly consisting of 36 members, 4 of whom are elected by each of the 9 parishes. There are 1,200 electors, whose individual qualifications are the possession of freehold property of not less than 60 pounds sterling in value.

BRITISH HONDURAS.

British Honduras, a British Crown colony on the Caribbean Sea south of Yucatan and 660 miles west from Jamaica, is especially devoted to the production of mahogany and logwood. Its exports of mahogany in 1897 amounted to 6,777,382 superficial feet, and the total value of its exports of all articles to \$1,404,387, while its

imports were \$1,422,097 in value. The transit trade somewhat increases the traffic of the ports, especially in india rubber, sarsaparilla, coffee, etc. Besides the staple products of mahogany and logwood there are coffee, bananas, plantains, cocoanuts, etc. In 1897 the vessels entering the ports of British Honduras were 641 in number, with a tonnage of 194,144 tons. Of these vessels, 249, with a tonnage of 78,802, were British. The government is under the direction of a governor appointed by the Crown, assisted by an executive council of four official and three unofficial members, and a legislative council consisting of three official and five unofficial members. The financial conditions include a savings bank at Belize, with five branches, having deposits amounting to \$23,464. United States gold was adopted as the standard of currency on October 15, 1894; there is also a paper currency of \$118,000, and a subsidiary silver coinage of about \$200,000. The population in 1897 was estimated at 35,000. The area of the colony is about 1,562 square miles. Its extreme length is about 174 miles and its breadth 64 miles. On the north lie Yucatan and Mexico, on the west and south Guatemala, and on the east the Caribbean Sea. The country consists chiefly of primeval forests, with "savannas" and so-called "pine ridges," which are open sandy plains covered with a wiry grass, affording pasturage for cattle, and dotted with pine trees. The ground is level and swampy along the coast line, and generally flat for about 10 to 20 miles inland; after which hills from 500 feet to 4,000 feet in height succeed each other to the western boundary. Wood cutting forms the chief industry of the colony, mahogany, logwood, and other excellent furniture woods being the subjects of chief attention.

BRITISH GUIANA.

British Guiana, which lies on the northeast coast of South America, includes the settlements of Demerara, Essequibo, and Berbice, which are named from the three rivers upon which they are located. The population in 1897 is given by the Statesman's Year-Book as 285,315, of which number about 2,500 were born in Europe. There are about 100,000 Africans, 105,000 East Indians (mainly coolies) and 3,714 Chinese. Of this number 90,000 live on sugar estates and 126,000 in villages and settlements. Of the total number, 125,000, according to the last census, were agricultural laborers. Of the 80,000 acres under cultivation, 70,000 are devoted to sugar, the size of the sugar estates averaging nearly 1,000 acres. Gold mining is also a considerable industry, the production of gold from the mines of British Guiana in 1898 having been 140,000 ounces, representing a value of \$2,208,042. The chief imports of 1897-98 were flour, £140,000; clothing, £156,000; rice, £96,000; machinery, £74,000; minerals, £73,000; fish, £46,000; coal, £36,500; and hardware, £28,000. The chief exports were sugar, £1,023,523; rum, £132,586; and gold, £456,436 for the 125,000 ounces mined.

The railways in operation are 40 miles in length, river navigation 450 miles, post-offices 70 in number, telegraph offices 42 in number, money-order offices 36, savings banks 22. The government is under the direction of a governor appointed by the Crown, who is assisted by a court of policy of seven official and eight elected members, the latter elected by the registered voters. There is also a combined court, consisting of the court of policy, and six financial representatives elected by the registered voters. The functions of the combined court are to consider the estimate of expenditures and to raise the ways and means to meet them, and this court alone may levy taxes. The Roman-Dutch law is in force in civil cases, modified by orders in council. The criminal law is based upon that of Great Britain.

POPULATION AND PRODUCTION OF THE BRITISH WEST INDIES.

The population of the West Indian Islands, generally speaking, contains a very small percentage of whites, a very large percentage of Africans, a considerable percentage of natives of India and their descendants, a considerable number of Chinese, and a few descendants of the original Carib tribes which occupied the islands upon their discovery, though of these the number is extremely small, the original inhabitants having been in many cases almost entirely exterminated by the wars waged by the early Spanish discoverers and occupants, who utilized the natives where practicable as slaves in mines; in other cases making war upon them with the purpose of obtaining control of their properties and productive lands. The native race having been exhausted, its place

was supplied by slaves brought in from Africa. When slavery was abolished in the British West Indies in 1832, the French West Indies in 1848, Porto Rico in 1873, and Cuba in 1886, coolies from India were brought in in large numbers, and a considerable number of Chinese laborers and a few Portuguese. The reduction in profits in sugar production which followed the abolition of slavery and the rapid growth of beet sugar production in Europe caused many of the white residents of the West Indian Islands to remove from the islands to Europe, leaving their estates in the hands of agents or gradually disposing of them in smaller holdings. As a consequence, the percentage of white population in the West Indies is extremely small, and the number of landowners vastly greater than a few years—even a quarter of a century ago—while the population is composed chiefly of negro descendants of freed slaves, mulattoes, Indian coolies, Chinese laborers, etc.

The question of sugar production in the West Indies in competition with bounty-encouraged sugar in other parts of the world was the subject of an elaborate examination in 1897, the work of which is summarized by Hazell's *Annual* for 1899, pages 659 and 660, as follows:

During 1897 a royal commission, consisting of Sir Henry Norman, Sir David Barbour, and Sir Edward Grey, was occupied in investigating the condition of the sugar industry in the West Indian colonies, and especially the causes of the present depression. The report of the commission was published as a blue book, October 2, 1897, and the conclusion of the commissioners may be summarized as follows: The sugar industry in the West Indies is in danger of great reduction, which, in some colonies may be equivalent, or almost equivalent, to extinction. The depression of the industry is due to the competition of other sugar-producing countries, and in a special degree to the competition of beet sugar produced under a system of bounties. It is also affected by high protective tariffs. The causes of the depression are permanent, inasmuch as they are largely due to the policy of foreign countries, and there is no indication that that policy is likely to be abandoned in the immediate future. It is not due in any considerable degree to extravagance in management, to imperfection in the process of manufacture, or to inadequate supervision consequent on absentee ownership, and the removal of these causes, whenever they exist, would not enable it generally to be profitably carried on under present conditions of competition. The depression is increasingly causing estates to be abandoned, and such abandonment is causing, and will cause, distress among the laboring population, including a large number of East Indian immigrants, and will seriously affect for a considerable time the general prosperity of the sugar-producing colonies, and will render it impossible for some, and perhaps the greater number of them, to provide, without external aid, for their own government and administration. There is no industry or industries that could completely replace, in such islands as Barbados, Antigua, and St. Kitts, the sugar industry. In Jamaica, in Trinidad, in British Guiana, in St. Lucia, in St. Vincent, and to some extent in Montserrat and Nevis, the sugar industry may in time be replaced by other industries, but only after the lapse of a considerable period and at the cost of much displacement of labor and consequent suffering. In Dominica the sugar industry is not at the present day of great importance.

"Coming to the question of remedies, the commissioners had to dismiss the best remedy, the abandonment of the bounty system by continental nations, as quite improbable. They were divided in opinion as to the imposition of countervailing duties on bounty-fed sugar imported into the United Kingdom, the chairman, Sir Henry Norman, supporting, and his two colleagues opposing, such a course. Various special remedies or measures of relief were, however, recommended as follows: (1) The settlement of the laboring population on small plots of land as peasant proprietors; (2) the establishment of minor agricultural industries and the improvement of the system of cultivation, especially in the case of small proprietors; (3) the improvement of the means of communication between the different islands; (4) the encouragement of a trade in fruit with New York, and possibly, at a future time, with London; (5) the grant of a loan of 120,000 pounds sterling from the imperial exchequer for the establishment of central factories in Barbados. The expenditure which these measures would involve was estimated as follows: (1) A grant of 27,000 pounds sterling a year for ten years, to carry out the special remedies recommended in (2), (3), and (4); (2) a grant of 20,000 pounds sterling a year for five years for the smaller islands; (3) immediate grants of 60,000 pounds sterling and 30,000 pounds sterling, or 90,000 pounds sterling in all, to clear off the floating debt in some of the smaller islands, and to make roads and settle the laboring population on the land in Dominica and St. Vincent; a loan of 120,000 pounds sterling to Barbados for the establishment of central factories.

"As to the expenditure which might be necessary for relieving distress (especially in British Guiana and Barbados), in promoting immigration, and in supporting and repatriating East Indian immigrants, the commissioners were unable to form any estimate, but it might be very great if there occurred a sudden and general failure of the sugar industry in Barbados and British Guiana. In such a contingency neither British Guiana nor Barbados would be able to meet the necessary cost of administration for probably a considerable number of years. A sugar-bounties conference was held, on the invitation of the Belgian Government, at Brussels, in June, 1898, Austria, Belgium, France, Germany, Great Britain, Holland, Russia, Spain, and Sweden being represented. It soon appeared that France would not consent to the complete suppression of all export bounties on sugar, whether direct or indirect, and that Russia declined to discuss the question of her internal legislation, contending that her system did not amount to a bounty on the exportation of sugar. Austria and Hungary, however, with Germany, Belgium, and Holland, were ready to abolish their bounties, and Spain and Sweden would offer no opposition to such a course. But no action could be expected from these countries in face of the attitude of France and Russia, and so the conference separated without any practical results. The British delegates reported that, failing any arrangement for modifying the French and Russian systems acceptably to other countries, the only course would be for those other sugar-producing countries to conclude the convention, suppressing bounties within their dominions and engaging to impose countervailing duties on, or prohibit the entry of, bounty-fed sugar coming from states not included in the convention. The West Indian planters then reiterated their demand for countervailing duties, and a conference of their representatives was held in Barbados in September, 1898. A resolution was adopted, in which appreciation of the imperial grants was expressed, but also the opinion that the imperial Government should, as a matter of right and as the only possible remedy, exclude bounty-fed sugar from the English market or impose countervailing duties."

PRESENT BUSINESS CONDITIONS.

The *Statesman's Year-Book* for 1899 gives the following summarization of West India statistics:

Customs revenue (1897): Bahamas, £53,456; Barbados, £106,880; Jamaica, £283,012; St. Lucia, £29,844; St. Vincent, £10,961; Grenada, £26,292; Virgin Island, £720; St. Kitts, Nevis, and Anguilla, £24,720; Antigua, £23,800; Montserrat, £3,681; Dominica, £10,652; Trinidad, £241,685; Tobago, £2,687.

The chief branches of expenditure (1897) were: Jamaica—charges of debt, £112,651; police, £62,410; public works, £40,982. Bahamas—public works, £7,219; debt charges, £8,385; salaries, £18,218; police, £5,549. Barbados: Salaries, £78,406; debt charges, £1,561; police, £23,370. St. Vincent—public works, £2,769. St. Lucia—public works, £6,292; salaries, £17,734. Grenada—public works, £9,615. Trinidad—public works, £97,540; police, £44,044; debt charges, £37,046; salaries, £214,594.

In 1897 the public debt of Jamaica was £1,994,184; of Bahamas, £119,026; of Barbados, £409,150; of Trinidad, £516,518; of St. Vincent, £19,100; of Grenada, £127,770; of Tobago, £9,500; of Montserrat, £24,600; of St. Kitts, Nevis, and Anguilla, £89,450; of St. Lucia, £191,980; of Antigua, £150,671; of Dominica, £70,900.

In 1897 Jamaica imported cotton goods worth £208,318; fish, £116,240; flour, £162,378; rice, £40,442. Trinidad imported flour, £127,283; textiles, £309,611; rice, £148,777. Bahamas: Cottons, £39,436; flour, £25,417. Barbados: Cottons, £131,562; flour, £57,843; rice, £50,664; fish, £82,457. St. Lucia: Cottons, £23,308; flour, £17,756. St. Vincent: Flour, £8,610. Leeward Islands: Cottons, £42,828; flour, £47,000. Grenada: Flour, £23,158.

Exports from Great Britain to West Indies in 1897, £1,784,185 (cottons, £442,531; apparel, £197,033; leather and saddlery, £92,487; iron, £132,504; manure, £56,257; machinery, £48,785).

Trinidad alone, in 1897, exported sugar valued at £537,107; cocoa, £605,690; molasses, £16,991. Jamaica exported sugar, £120,959; rum, £92,553; coffee, £165,494. Barbados: Sugar, £447,430; molasses, £86,094. St. Vincent: Sugar, £25,592; arrowroot, £21,859. Grenada: Cocoa, £132,642; spice, £13,503. St. Lucia: Sugar, £59,398; cocoa, £17,158. Leeward Islands: Sugar, £236,209.

Total imports into Great Britain from the British West Indies in 1897, according to board of trade returns, £1,453,089 (sugar, £560,288 in 1896, £338,798 in 1897; rum, £159,155; cocoa, £418,996; and dyewoods, £58,194).

The total tonnage entered and cleared (foreign trade) in 1897 was as follows:

	Tons.		Tons.
Bahamas	518, 217	Antigua	445, 948
Barbados	1, 335, 962	Montserrat	228, 715
Jamaica	1, 560, 944	Dominica	407, 460
Turks Islands	328, 374	Trinidad	1, 296, 902
St. Lucia	1, 780, 560	Tobago	44, 094
St. Vincent	248, 877		
Grenada	443, 308	Total (1897)	9, 143, 035
Virgin Islands	11, 545	Total (1896)	8, 234, 484
St. Kitts and Nevis	491, 629		

Of the total tonnage returned, in 1897, 7,246,859; in 1896, 6,517,418, was British.

Currency, weights, and measures throughout the islands are those of Great Britain, though in several of them various American coins are prevalent.

EXPORTS OF THE PRODUCTS OF DOMESTIC MANUFACTURE
FROM THE UNITED STATES,

BY ARTICLES AND COUNTRIES.

1889-1898.

EXPORTS OF MANUFACTURES.

SHOWING VALUE OF EACH CLASS OF DOMESTIC MANUFACTURES EXPORTED TO EACH COUNTRY, 1889 TO 1898.

The remarkable increase in the exports of American manufactures during the past few years seems to justify a somewhat detailed study of that subject with the purpose of determining what particular lines of our manufactures are most demanded abroad, and what particular sections of the world are our best markets. With that object in view there is presented herewith a series of tables showing the exportation of each of the principal articles of American manufacture in each year during the past decade, and the amount of each article sent to each of the countries of the world.

These figures show that the total value of our manufactures exported has increased 110 per cent in the last decade, while an examination of the exportation of manufactures by other countries fails to show any considerable percentage of increase in any of them during the same period. Great Britain's exports of manufactures show no increase since 1890, the earliest year at which a separate statement of manufactures exported is attainable, while her total exports of domestic products (of which manufactures form about 85 per cent) shows no increase in value in the decade 1888-1897. From France the exports of manufactures show an increase of but 10 per cent in the decade 1887-1896; Germany, 13 per cent; Switzerland, 6 per cent; Netherlands, 3 per cent, and Austria-Hungary and Russia a loss, while, as above indicated, the exports of American manufactures in the decade 1889-1898 shows an increase of 110 per cent, and in the year 1899 will be about three times that of 1879.

An examination of the details of our own exportation of manufactures shows that it is in the production, manufacture, and exportation of metals that we seem to excel. The history of nations and peoples shows that great groups of people frequently excel in certain industries, and the growth of our exportation as well as our domestic production of manufactures seems to point to metals as our most successful line of work, at least at the present time. In 1889 manufactures of metals formed less than 20 per cent of our total exportation of manufactures, and in 1898 was over 44 per cent of our exports of manufactures. The increase in exportation of metals and manufactures thereof in the decade 1889-1898 was 339 per cent, while the increase in the exportation of all manufactures in that time was but 110 per cent, and the increase in exportation of manufactures other than those of metals during that time was but 55 per cent. In this statement of the exportation of manufactures of metals only those articles composed exclusively of metals are included, those made up in part of metals, such as railway cars, agricultural machinery, etc., being included among the other manufactures. The rapid increase in the exportation of manufactures of metals is shown by the fact that the exports of brass and manufactures thereof in 1889 were but \$321,137, and in 1898, \$1,320,093; instruments for scientific purposes increased from \$1,033,338 to \$2,770,893, and in the year about to end will reach nearly \$4,000,000; cycles, of which there were no exportations in 1889, amounted to \$6,846,529 in 1898; clocks and watches increased from \$1,355,319 in 1889 to \$1,727,489 in 1898; zinc and manufactures thereof from \$28,684 to \$1,339,668; copper and its manufactures from \$2,348,954 to \$32,180,872, and iron and steel from \$21,156,077 in 1889 to \$70,406,885 in 1898, while in the fiscal year 1899 it will exceed \$90,000,000.

Another interesting fact developed by an examination of the figures is that the European countries, in which manufactures have long been established furnish as satisfactory a market for our manufactured goods as do the countries where manufacturing has not yet been largely developed. In reapers and mowers, clocks and watches, sewing machines, bicycles, and the various manufactures of iron and steel, and many other articles of the higher grades of manufacture, the European countries in which manufacturing plants and machinery and skilled workmen abound, furnish a market for a large share of our exports, thus failing to justify the expressed fear that a development of manufactures in countries where we are now seeking a foothold for our commerce would destroy their value as a permanent market.

In this attempt to show the growth of the exportation of each article in every direction, it has only been practicable to measure the growth by values, as the varying value of the units of quantity designated by a common name would prove confusing and misleading. A statement of the number of watches, clocks, sewing machines, typewriters,

electrical instruments, mowers and reapers, carriages, articles of glass and china ware, builders' hardware, and miscellaneous articles of cotton and woolen goods, for instance, in which the value of units ranges from a few dollars to hundreds in a single class, would convey no information for comparative purposes and does not supply any facility for measuring the real growth of the industry or the commerce in it, as does the simple statement of total values by classes. On the other hand, the well-known fact that prices of nearly all classes of manufactured goods have greatly decreased by reason of cheapened and improved methods of production, renders a mere statement of values somewhat misleading in an attempt to determine the actual increase in the exportation of numbers or quantity of nearly all articles. For instance, the average value of steel rails exported in 1889 was \$31.80 per ton, and in 1898 \$20.08 per ton, and as a consequence the statement that \$4,613,376 worth of steel rails were exported in 1898, against \$235,377 worth in 1889, does not tell the full story of the growth in this line of export, and it is probable that the increase of 110 per cent in the mercantile value of all manufactures exported in 1898 over those of 1889 represents an increase of fully 150 per cent in quantity if a common unit could be utilized in its measurement.

MANUFACTURES OF IRON AND STEEL.

As already indicated, the largest growth in our export of manufactures is in those of metals. The largest class of manufactures of metals exported is that of iron and steel. In 1880 the export of manufactures of iron and steel was \$14,716,524, and in 1899 will exceed \$90,000,000 or more—six times that of 1880. On the other hand, the imports of iron and steel and manufactures of, which in 1880 were \$71,266,699, will in 1899 be below \$12,000,000, or less than one-sixth that of 1880. This remarkable growth in this general class of exports seems to warrant a study of the more important of its details.

Steel rails.

In no feature of our export trade has there been a more remarkable growth during the decade than in rails for railways, and especially those of steel. The total exportation of iron rails in 1889 was but 7 tons, and in 1898 2,769 tons, the value rising from \$240 in 1889 to \$37,150 in 1898. In steel rails, however, the growth was even more remarkable, the number of tons exported in 1889 being 7,398, and in 1898, 229,783, while the value increased from \$235,387 in 1889 to \$4,613,376 in 1898, and in the fiscal year 1899 seems likely to reach \$6,000,000. This increase has been especially marked during the past three years, the exports of steel rails in the fiscal year 1896 being \$540,797, those of 1897 \$2,482,208, and those of 1898 \$4,613,376, while the first ten months of the fiscal year 1899 show a gain of \$1,360,000 over the corresponding months of last year. While this rapid increase is due to a generally increased demand, the countries showing the most marked growth in their purchases of steel rails from the United States are Russia, Canada, and Japan. The exports of steel rails to Russia, to which there had been no exports of steel rails from the United States in preceding years, amounted to \$323,693 in 1898. To the Dominion of Canada the exports of steel rails in 1898 were \$1,473,580, against \$952,555 in 1897 and \$305,634 in 1896. To Japan the 1898 exports of steel rails were \$1,150,766 in value, against \$899,217 in 1897, prior to which time there had been no exportations of steel rails from the United States to that country.

In structural iron and steel the increase in exportation has been very rapid, though it is difficult to show the exact growth by reason of the fact that this particular class of manufactures of iron was not separately stated in the export tables prior to 1898, in which year the figures reached considerably above \$1,000,000.

Wire.

The demand for American wire has also grown very rapidly in the last few years. In 1889 the total value of our exports of wire was \$594,616; in 1898 it was \$2,593,306, and in 1899 seems likely to reach nearly \$4,000,000. Naturally the newer countries are our largest customers in this line. Canada last year took \$588,062 worth of wire out of the \$2,593,306 worth exported, while British Australasia came second with purchases amounting to \$485,285; Brazil next, \$305,668, while to the United Kingdom we exported \$276,492 worth, though it is not improbable that a part of this was for reexportation to her colonies. To Mexico the exports of wire amounted to \$216,042, or slightly less than in the preceding year; to Argentina, \$199,365, and to British Africa, \$117,215.

Builders' hardware.

In the increasing demand for builders' hardware, including locks, hinges, etc., is a remarkable evidence of the success of American manufacturers in the finer grades of iron and steel production. The total exports of "locks, hinges, and other builders' hardware" amounted in 1889 to \$1,700,390, and in 1898 to \$3,997,796, an increase of 135 per cent. An examination of the details of these exports shows that the growth in the exports to the older countries, where manufactures are in their most highly developed state, has been even more rapid than indicated

by the total growth. To the United Kingdom the exports of these articles in 1889 was but \$295,576, and in 1898 \$1,181,860, an increase of 300 per cent. To Belgium the exports of this class of articles increased from \$36,744 in 1889 to \$149,353 in 1898; and to Germany the exports increased from \$104,115 to \$634,520, or more than 500 per cent, against an average increase of 135 per cent for the total exports. The superiority of our methods of manufacture in these lines is also attested by the fact that in 1898 Germany imported from the United States no less than \$1,669,828 worth of metal-working machinery, and that the United Kingdom also purchased \$1,461,285 worth, France \$577,165, and Belgium \$252,444 worth of metal-working machinery, these four great manufacturing countries of the world having thus taken over three-fourths of our total exports of metal-working machinery, which in 1898 amounted to \$4,618,683.

High-grade machinery sold in European markets.

Another tribute to the skill of American workmen is found in the fact that the United Kingdom has steadily increased her purchases of printing presses from the United States, of which she bought \$33,686 worth in 1889, while in 1898 her total imports of this class of machinery from the United States was \$512,554, or more than one-half of our total exports of this class of manufactures.

Of the \$3,136,364 worth of sewing machines which we sold during the fiscal year 1898, nearly two-thirds has gone to European countries in which the highest development of manufacturing industries in the finer grades is supposed to have been reached. To the United Kingdom alone our sales of sewing machines have ranged from \$600,000 to \$1,000,000 a year during the decade; to Germany there has been a steady increase from \$213,904 in 1889 to \$861,702 in 1898, while to France the exports of sewing machines have ranged in the vicinity of \$100,000 per annum. Out of \$2,247,875 worth of sewing machines exported in 1889, \$1,179,705 worth went to European countries, and of the \$3,136,364 worth exported in 1898, \$2,055,804 worth went to European countries. From this it will be seen that there has been a more rapid increase in our exportations of sewing machines to the great manufacturing countries of Europe during the decade than to other parts of the world where manufactures of the higher grades are not so far advanced as in those countries which are proving our best customers in these lines.

In bicycles and typewriters the same characteristics mark our exportation. The countries having the highest development of industrial skill are our best customers in both these lines. Of the \$6,846,529 worth of bicycles exported last year, \$5,008,752 went to European countries, and of the \$1,902,153 worth of typewriters exported last year, \$1,649,050 went to European countries.

In shoe-manufacturing machinery this condition is even more apparent. Of the \$895,788 worth of machinery for the manufacture of shoes exported from the United States in the fiscal year 1898, \$838,845 worth went to Europe. Of the product of this machinery which we export—finished boots and shoes—about one-fourth went to European countries, the remainder going to Asia, Africa, Australasia, and various parts of America; a quarter of a million dollars' worth to Canada, another quarter of a million dollars' worth to British West Indies, a like quantity to British Australasia, \$170,000 worth to the Hawaiian Islands, \$100,000 to Africa, and \$65,000 worth to South America.

Railway engines.

American railway engines have shown remarkable gains in their popularity throughout the world during the decade. In 1889 the exportations amounted to \$1,227,149 in value, in 1898 to \$3,883,719, and in the fiscal year about to end the total value of railway engines exported will be nearly \$5,000,000. In 1889 the number exported was 144; in 1893, 468, and in the year about to end the number will exceed 500. These go to all parts of the world, and especially where new railways are being constructed. To Japan, where in 1890 but 1 railway engine was sent, the number in 1894 was 15; in 1896, 23; in 1897, 95, and in 1898, 167. To Russia the exportation of engines from the United States began in 1895, when the number sent was 2; in 1896 it was 74; in 1897, 60, while the number sent to Russia during the present fiscal year will probably considerably exceed those of any preceding year. Naturally Canada and Mexico, by reason of their proximity and the similarity of their railway systems to our own, are large purchasers of our engines, the number sent to Canada having averaged 6 or 8 per annum up to 1897, while in 1898 the number was 74. To Mexico the number sent in 1889 was 30; in 1897, 76, and in 1898, 46; to Africa the exportation of engines from the United States began in 1896, when 4 were sent, and in 1898, 33.

American railway cars find less favor in Europe than do our engines, because, especially in passenger cars, the railway methods in that part of the world differ so widely from our own. Our exportation of railway cars to Europe in 1898 amounted to about \$140,000 only out of a total export of \$1,478,188. The larger proportion of our exportation of passenger cars was to Brazil, Mexico, Argentina, and Africa, the relative values of exports being in the order named.

Wire nails.

While no class of our exports of manufactured articles has shown a greater growth than those of iron and steel, no single article of this great class shows a more striking increase than wire nails. These especially are the product of American genius and skill, combining the use of ingenious machinery in their manufacture and the use of steel in their production, which is rendered practicable by the marked reduction in the cost of that article, due largely to improved methods of mining, handling, and manufacture. In 1889 the exportation of wire nails amounted in round numbers to 1,600,000 pounds, and in 1898 to 22,894,099 pounds, while in the ten months of the fiscal year 1899, the exportation is more than double that of the corresponding ten months of the preceding year, indicating that for the full fiscal year 1899 the total exportation of wire nails will amount in round numbers to 45,000,000 pounds, against 1,500,000 pounds in 1889. Exports of cut nails, while not making as rapid a growth as those of wire nails, show in the decade an increase of about 200 per cent, the exportation in 1889 being 11,827,458 pounds, and in 1898, 32,310,399 pounds. The remarkable development in this particular branch of our manufacturing industries is due largely to the superiority of the machinery used in this country in the manufacture of nails, the United States having been the first in the world to produce cut nails, while wire nails, whose manufacture in the United States began in 1851 or 1852, have come into more general use during the past few years, and are, as shown by the figures already quoted, rapidly outstripping all other kinds in this line of production in their sales abroad. Of our exportations of wire nails in 1898, by far the largest portion in value went to Japan, which took more than one-half of the total exportation of this article, the value shipped to that country in 1898 being \$267,210 out of a total export of \$458,787.

In many other articles of iron and steel requiring a high grade of manufacturing skill the exportations show a rapid gain.

AGRICULTURAL IMPLEMENTS.

Naturally the United States, as an agricultural as well as manufacturing country, finds a demand upon her for agricultural implements. It is interesting, however, to find that this demand comes largely from European countries, where agriculture and manufacturing developed much earlier than in the United States. In mowers and reapers, of which the exportations last year were \$5,500,665 in value, \$4,233,566 worth was sent to European countries, and of this amount \$1,146,551 worth went to France, \$1,100,210 to Germany, and \$874,296 to the United Kingdom. To France and Germany the growth in exportation of harvesting machines has been very rapid, the exports to France in 1889 having been but \$200,259 and to Germany \$167,427 in value, while the year 1898 showed in each case an increase of more than 100 per cent over 1897, that of 1899, so far as its record is now completed, being considerably in excess of the remarkable figures of 1898, both as to Germany and France. Of course such large grain-producing countries as Australia, Argentina, and Canada also buy largely of our mowers and reapers; yet 77 per cent of our total exports of mowers and reapers went in 1898 to the countries of Europe. For plows and cultivators, however, the newer parts of the world in commercial development call more upon the United States than does Europe. Of the \$927,250 worth of plows and cultivators exported last year, only \$225,794 went to Europe, while to Canada alone we exported \$182,763 worth, to Argentina \$151,737, and to British Australasia \$108,116.

CHEMICALS AND PATENT MEDICINES.

In chemicals American manufacturers are making less rapid progress than those engaged in other industries. Our total exportation of chemicals in 1898 was but \$9,441,763, against \$5,542,753 in 1889. Meantime the importations of chemicals in 1898 were \$41,471,291, against \$39,754,672 in 1889, thus showing that American manufacturers have made little headway in capturing the home market, while the growth in their exportations has not been rapid. The largest specified article under the head of chemicals, drugs, dyes, and medicines is "Patent or proprietary medicines," of which the exportation in 1898 was \$2,460,669, against \$1,796,202 in 1889, while the figures of the year about to end will be something larger than those of last year. While American patent medicines have been the object of more or less adverse criticism in other parts of the world, the exports in this line have made steady headway in every direction, and in no part of the world more rapidly than in Europe. Of this class of articles the exports from the United States to the United Kingdom in 1898 were \$1,108,229, against \$676,335 in 1889. The importations of patent medicines into Germany and France from the United States during 1898 were small, the total for Germany being but \$62,053, against \$49,893 a decade ago, and that for France being but \$2,080 in 1898, against \$6,995 in 1889. Into Canada the importations of this class from the United States increased from \$20,000 in round numbers in 1889 to \$120,000 in 1898. To Cuba and Porto Rico there has been a gradual reduction in the export of patent medicines for several years, the high-water mark having been reached in 1892, when the total to Cuba was \$107,789 and to Porto Rico \$25,193; but this has steadily declined until that of Cuba reached \$48,937 in 1897 and \$37,278 in 1898, while that of Porto Rico had fallen to \$10,339 in 1897.

and \$6,376 in 1898. On the other hand, there is a marked increase in exportations of this line of manufactures to China, British Africa, Argentina, Brazil, and others of the South American countries, the exports to China increasing from \$2,536 in 1889 to \$10,494 in 1898; those to British Africa, from \$30,030 in 1889 to \$87,761 in 1898; to Argentina, from \$88,770 in 1889 to \$106,947 in 1898; to Brazil, from \$154,139 in 1889 to \$245,205 in 1898.

CLOCKS AND WATCHES.

American watches have outstripped American clocks in the race for popularity abroad. In 1889 the exportation of clocks from the United States amounted to \$1,149,289, and in 1898 to \$955,557, while the exportation of watches grew from \$206,030 in 1889 to \$771,912 in 1898, and in the fiscal year about to end promises to reach nearly a million dollars. To the United Kingdom alone the exports of watches during the decade have more than doubled, while Canada, the South American countries, British Australasia, China, and Japan are among our largest purchasers. The prediction made a few years ago that the manufacture of watches by machinery in Japan would soon result in reducing our sales in that direction has not yet been verified. The exportation of watches to Japan has increased from \$11,365 in 1894 to \$21,410 in 1895, \$61,340 in 1896, \$101,925 in 1897, and \$120,761 in 1898, while the exportation of clocks to Japan has decreased from \$172,701 in 1889 to \$42,677 in 1898.

COPPER AND ITS MANUFACTURES.

No class of our exportations shows a more rapid growth than that of copper. This is due both to the increased demand in all parts of the world for copper, which has arisen largely by reason of the increased use of electricity, of which copper proves the most acceptable conductor, and to the further fact that the United States has become the world's largest producer of copper ore, and that of a superior quality. The bulk of the exportation of copper, while classed as manufactures, goes abroad in the lowest form of manufacture, namely, ingots and bars. Naturally a very large proportion of the copper exported goes to European countries, which in 1898 took over \$30,000,000 worth of the \$31,075,636 worth exported in that year, \$8,079,164 going to the United Kingdom, \$8,081,661 to Netherlands, \$6,770,671 to France, \$3,705,937 to Germany, and \$2,270,549 to Belgium. Under the head of manufactures of copper, the total exportations in 1898 amounted to \$1,105,236, of which \$298,584 went to the United Kingdom and \$620,083 to Canada. Of brass, which is composed of about two parts copper and one part zinc, the exportations have also grown very rapidly during the decade, having been in 1889 but \$321,137 in value, against \$1,320,093 in 1898.

TEXTILE MANUFACTURES.

Cotton manufactures, and especially cotton cloth, show a gratifying growth in exportation. The number of yards of cotton cloth exported in 1889 was 118,453,191; in 1898, 270,507,811, and in the fiscal year about to end the total will reach nearly 400,000,000 yards, or more than three times that of a decade earlier. Fully one half of this goes to China, 171,929,748 yards having been exported to China during the ten months of the present fiscal year, out of a total exportation of 330,620,821 yards, while the other half is distributed largely among the South and Central American countries and Oceanica, 22,000,000 yards having been exported during the ten months to the West Indies, 43,000,000 yards in round numbers to South America, 5,500,000 yards to British East Indies, and 7,000,000 yards to Africa. A marked example of the fall in prices of manufactured articles is found in the fact that the average value of cotton cloths exported in the present year is 4.6 cents per yard, against an average of 7.1 cents per yard in 1889.

Manufactures of fibers, vegetable, and textile grasses show an increase of exportation during the decade from \$1,644,485 in 1889 to \$2,557,465 in 1898. The principal item of increase in this group has been twine, which has increased from \$363,611 in 1889 to \$1,091,576 in 1898, and in the present year will considerably exceed last year's total. The large proportion of this goes to Canada, which took \$545,061 worth, and Argentina, whose imports of twine from the United States were \$218,074.

BOOTS AND SHOES.

Boots and shoes of American manufacture are proving acceptable in all parts of the world, the exports thereof amounting to \$585,902 in 1889, \$1,816,538 in 1898, and in 1899 will reach about \$2,500,000 in value. Of the \$1,816,538 worth of boots and shoes exported in 1898, about \$500,000 worth went to Europe, \$270,000 to Canada, \$235,000 worth to British Australasia, \$169,000 worth to the Hawaiian Islands, and \$250,000 worth to the West Indies.

SCIENTIFIC INSTRUMENTS.

Instruments and apparatus for scientific purposes, including telegraph, telephone, and other electrical instruments, show a rapid increase. Prior to 1889 the exportations of this class of manufactures had never reached a total of \$1,000,000, while in the year 1899 the total will reach \$4,000,000. In this, as in other high grades of

manufactures, European countries are among our largest customers, the exports of this class of goods to Europe last year being 43 per cent of the total exportation; while Canada, Mexico, and Japan each took about 10 per cent of the total.

ILLUMINATING OILS.

In refined illuminating oils, which have for years been classed among manufactures in our export tables, the increase in value from 1889 to 1898 is apparently small, owing to the great reduction in prices, the 1889 figures being \$39,286,333, and those of 1898, \$42,922,682. In quantity, however, there has been a marked increase, the number of gallons of refined illuminating oil exported in 1889 being 502,257,455, and in 1898, 824,426,581, the largest quantity ever exported in a single year. While South America and the Orient are usually looked upon as large consumers of our mineral oils, more than half of our total exports of illuminating oils goes to Europe, the total value of the exports of oil to Europe in 1898 being \$24,914,436, out of a total of \$42,922,082 in value, while to the United Kingdom alone the total was \$7,947,868; to Germany \$5,482,493, and to Netherlands \$5,401,451. China, India, and Japan, however, are large consumers of our mineral oils, the total value of the exportations of refined illuminating oils in 1898 to China being \$2,839,345; to British India, \$2,278,617; and to Japan, \$3,592,587; while to British Australasia the value of the exports in this line was \$1,750,164; to Brazil, \$1,370,425, and to Argentina, \$934,093. A petroleum product whose exportation has largely increased in the past few years is that of paraffin, of which the total exportation in 1889 was \$2,029,602, and in 1898, \$6,030,292. This material, which is much used for the manufacture of candles and as a substitute for wax, goes largely to Europe, the United Kingdom having taken in the fiscal year 1898, \$3,671,424 worth out of the \$6,030,292 worth exported, while the exports to Germany were \$926,540 in value; those to Italy, \$307,311; Belgium, \$143,501; Netherlands, \$129,183; Mexico, \$157,863; Japan, \$158,305, and British Australasia, \$117,246.

A GENERAL ADVANCE IN EXPORTATION OF MANUFACTURES.

A study of the tables which follow will show an increase in the exportation of practically all lines of manufactures. As already indicated, the statements which are confined to values only do not, in many cases, show the full growth in exportation, by reason of the fact that the improved methods of the decade have reduced the cost of production, and consequently values of the units of quantity represented by the statements in values. The fact, however, that the exportation of manufactured articles has increased 110 per cent during the decade, against an increase of 66 per cent in the total exports of domestic products in a decade in which the growth in our total exports has shown such rapid gains, seems to justify the belief that American manufacturers and their products are in future to form important factors in meeting the world's demand. The exportation of manufactures has more than doubled in the last six years, more than trebled since 1880, more than quadrupled since 1870, is more than eight times as large as in 1860, and in 1898 and 1899 for the first time in our history exceeded the importation of manufactures.

The following table shows the value of imports and exports of manufactures each fiscal year from 1888 to 1898, the imports covering only those entered for consumption:

IMPORTS AND EXPORTS OF MANUFACTURES.

YEAR ENDING JUNE 30—	Imports for consumption.	Domestic ex- ports.	YEAR ENDING JUNE 30—	Imports for consumption.	Domestic ex- ports.
